## Risks

UBS Equity Long-Short Funds deliver a long and short exposure to equities in order to reduce the volatility of the portfolio compared to a common long only equity fund. Despite the expected reduction in volatility, the funds can still be subject to high fluctuations in value. For this reason, an investment horizon of at least five years and corresponding risk tolerance and risk capacity are required. The fund may enter into OTC derivative contracts to generate the equity exposure. These contracts are collateralised, however the risk of a counterparty default remains. UBS Equity Long-Short Funds pursue an active management style and may deliver significant negative performance over certain periods. The fund can perform negatively while underlying equity markets perform positively and vice versa. Each fund has specific risks, which can significantly increase under unusual market conditions. As the fund uses derivatives & sophisticated leverage techniques, investors must be willing to bear the additional risk involved.

Please note that additional fees (e.g. entry or exit fees) may be charged. Please refer to your financial adviser for more details. Investors should read the Key Investor Information Document (KIID), Prospectus and any applicable local offering document prior to investing and to get complete information of the risks.
