Benefits

Clients benefit from the return potential of corporate bonds, which is higher than that of government bonds. Active portfolio management ensures that particular attention is paid to the prevailing economic situation, sector selection and issuers' credit ratings. Risk is kept in check via meticulous company analysis and broad diversification of the portfolio.

Additional information

- The investment objective is to generate a higher return than on prime USD bonds.
- The portfolio manager is not tied to the benchmark in terms of investment selection or weight.
- The exchange rate risk between USD and CHF is largely hedged.

Risks

Depending on the credit quality, the default risk is higher in the case of high yield bonds than with investment grade corporate and government bonds. Changes in interest rates have an effect on the value of the portfolio. This requires corresponding risk tolerance and capacity. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk).

Please note that additional fees (e.g. entry or exit fees) may be charged. Please refer to your financial adviser for more details. Investors should read the Key Investor Information Document (KIID), Prospectus and any applicable local offering document prior to investing and to get complete information of the risks. Investors are acquiring units or shares in a fund, and not in a given underlying asset such as building or shares of a company.
