## Benefits

The fund offers the investor straightforward and convenient access to UBS House View, which draws on the professional insights of UBS investment specialists worldwide. The inclusion of optimized alternative investments, including hedge funds optimises the portfolio's risk/return profile. Investors benefit globally from diversified market opportunities in a wide variety of asset classes. The weighting of the different asset classes is maintained within a specific range in order to take account of the fund's risk profile. The fund is attractive for investors who see risks as opportunities too. The fund aims to generate interest and dividend income as well as capital gains.

## Risks

The fund invests in equities, bonds of varying credit quality, money market securities on a global basis, as well as in alternative forms of investment such as hedge funds. It may therefore be subject to fluctuations in value. The fund may use derivatives which can reduce investment risk or give rise to additional risks (inter alia the counterparty risk). The fund can invest in less liquid assets that may be difficult to sell in the case of distressed markets. It therefore cannot be ruled out that the daily issue and redemption of fund units may be suspended temporarily. The value of a unit may fall below the purchase price. This requires an elevated risk tolerance and capacity. Every fund reveals specific risks, a description of these risks can be found in the prospectus. The monthly 4%-mdist distributing share classes may distribute capital as well as income. It is possible that the distributions result in an erosion of assets and a reduction of invested capital. There are potential negative tax consequences for some investors in some jurisdictions. Investors in some jurisdictions may incur a higher rate of tax on distributed capital than on any capital gains which are realised on disposal of fund shares. Some investors may therefore choose to invest in the accumulating (-acc) instead of the distributing (-dist) share classes. Investors may be taxed at a later point in time on income and capital arising on accumulating (-acc) share classes compared to distributing (-dist) share classes. Investors should seek their own tax advice.

## Additional information

- This share class distributes a constant percentage share of the NAV, not a constant amount.
- This share class is designed for investors who want to profit from performance opportunities on the financial markets and at the same time wish more stable distributions at a specific percentage level to cover recurring liquidity needs.
- As the distributions are substantial, this share class is not designed for investors who want to build wealth. The latter may prefer the accumulating share class.
- This share class must not be seen as an alternative to a savings account or fixed-interest paying investments.
- The percentage distribution rate of this share class is unrelated to the interest or other income generated in the fund. The distribution is a percentage payment of the current amount of investment.
- It is possible that the distributions result in an erosion of assets and a reduction of invested capital.
- This share class may distribute capital as well as income. There are potential negative tax consequences for some investors in some jurisdictions. See risk section below.
