² YTD: year-to-date (since beginning of the year)

Markets continue to be impacted by persistent inflation figures and concerns that monetary policy is going to remain restrictive for longer. The higher-than-anticipated interest rates resulted in some turmoil in the banking sector, sending an additional signal of uncertainty and putting a halt to short-term financial market growth.

Monthly performance

In March the fund performed positively with 0.8%. In March, risk assets recovered from the pull-back in February and continued the positive trend that we have seen during the year. Only UK equities fell in March. Returns across fixed income were also positive in March.

YTD performance

YTD as of the end of March, the fund has delivered a positive performance of 2.6%. Risk assets continue to deliver a positive performance in the year to date. Both developed and emerging markets delivered a positive first quarter to start the year, with developed markets in particular performing strongly. Bond markets have also performed positively this year.

Performance contributors

Fixed income investments were the best contributors in March, with Multilateral Development Bank and USD Investment Grade Corporates Sustainable performing particularly well. Equities also made an overall positive contribution. Within equities, the best contributions came from Swiss equities, as well as the Global Opportunity Sustainable, Long Term Themes, Active Climate Aware and Global Sustainable Improvers strategies.

Performance detractors

The only detractors in March were currency hedging and the Global Impact and Gender Equality strategies.

Current investment strategy

We increased our US corporate bond exposure by reducing our global equities and our position in the gender equality ETF. We are holding on to our positions in the EM Socially Responsible ETF and Gender Equality ETF, sourced from ESG Leaders and ESG Improvers. We are also sticking with our AUD overweight, sourced from the USD.

Risks

The fund invests in equities, bonds of varying credit quality and money market securities on a global basis, and may therefore be subject to high fluctuations in value. The fund may use derivatives which can reduce investment risk or give rise to additional risks (inter alia the counterparty risk). The value of a unit may fall below the purchase price. This requires an elevated risk tolerance and capacity. Every fund reveals specific risks, a description of these risks can be found in the prospectus.
