<sup>2</sup> YTD: year-to-date (since beginning of the year)

**Markets continue to be impacted by persistent inflation figures and worries that monetary policy is going to stay restrictive for longer. Higher-than-anticipated interest rates resulted in some turmoil in the banking sector, sending out an additional signal of uncertainty and halting short-term financial market growth.**

### Monthly performance

In March the fund performed positively with 0.5%. In March risk assets recovered from the earlier pullback and continued their positive trend in the year to date. Returns across fixed income were also positive in March. Hedge funds saw negative returns, while risk parity was positive this month.

### YTD performance

YTD as of the end of March, the fund has delivered a positive performance of 1.6%. Both developed and emerging markets (EM) made a positive start to the year, with developed markets in particular performing strongly. Bond markets have performed positively this year. Hedge funds have seen negative returns, while risk parity has performed positively this year.

### Performance contributors

The highest contributors on the equity side were the Global Opportunity Sustainable and Global Sustainable strategies, followed by global, Japan, Hong Kong and Canada equities. Within fixed income, the USD and EUR High Grade and Corporate strategies, as well as the Inflation Linked Bonds strategy, were the biggest contributors.

### Performance detractors

The biggest detractors from performance on the equity side were US, UK and emerging market equities, as well as the Global Value strategy. There were no significant detractors on the fixed income side. However, hedge funds and risk parity detracted in March, as did currency hedging.

## Current investment strategy

We increased our US corporate bond exposure by reducing our positions in US and global value equities. We are maintaining our positions in global value and EM equities, EM debt and US intermediate corporate bonds. In addition, we slightly reduced our position in USD long duration bonds. Furthermore, we are overweight in the AUD and underweight in the USD.

## Risks

The fund invests in bonds of varying credit quality, money market securities and equities on a global basis, as well as in alternative forms of investment such as hedge funds. It may therefore be subject to fluctuations in value. The fund may use derivatives which can reduce investment risk or give rise to additional risks (inter alia the counterparty risk). The fund can invest in less liquid assets that may be difficult to sell in the case of distressed markets. It therefore cannot be ruled out that the daily issue and redemption of fund units may be suspended temporarily. The value of a unit may fall below the purchase price. This requires an elevated risk tolerance and capacity. Every fund reveals specific risks, a description of these risks can be found in the prospectus.
