US equity markets were positive in April as calm returned temporarily after stress caused by concerns over US regional banks in March. April's performance was driven by strong Q1 earnings reports, especially from mega cap tech stocks that reported strong earnings, beating expectations and offering strong guidance.

### Monthly performance

In April the fund performed negatively with 0.4%. However, the fund lagged the broad US stock market, mainly due to negative stock selection.

### YTD performance

YTD as of the end of April, the fund has delivered a positive performance of 0.1%. The fund primarily suffered due to weak stock selection, while sector positioning added to returns.

### Performance contributors

The communication services, consumer staples, energy and financials sector exposures contributed to fund performance this month. At the stock level, the fund profited from holding Colgate-Palmolive Co., HCA Healthcare Inc. and S&P Global Inc. Additionally, the call overlay added value.

### Performance detractors

The industrials, consumer discretionary and materials sector exposures detracted from fund performance this month. At the stock level, the fund was negatively impacted by holding Skyworks Solutions Inc., Robert Half International Inc. and Cisco Systems Inc.

## Current investment strategy

We continue to follow our investment approach, investing in high total yield and high-quality stocks and holding a well diversified and defensive portfolio across countries and sectors. We believe that these factors will add value to the portfolio over the mid to long term.

## Risks

UBS Equity Funds invest in equities and may therefore be subject to high fluctuations in value. For this reason, an investment horizon of at least five years and corresponding risk tolerance and capacity are required. As these UBS funds pursue an active management style, each fund's performance can deviate substantially from that of its reference index. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. The fund can use derivatives, which may result in additional risks (particularly counterparty risk). In distributing share classes, the equity yield, net of fund fees, will be distributed. The distributing (-dist) share classes of this fund intend to distribute capital as well as income (e.g. from dividends). Investors in some jurisdictions may incur a higher rate of tax on distributed capital than on any capital gains which are realized on disposal of fund shares. Some investors may therefore choose to invest in the accumulating (-acc) instead of the distributing (-dist) share classes. Investors may be taxed at a later point in time on income and capital arising on accumulating (-acc) share classes compared to distributing (-dist) share classes. Investors should seek their own tax advice.

Please note that additional fees (e.g. entry or exit fees) may be charged. Please refer to your financial adviser for more details. Investors should read the Key Investor Information Document (KIID), Prospectus and any applicable local offering document prior to investing and to get complete information of the risks. Investors are acquiring units or shares in a fund, and not in a given underlying asset such as building or shares of a company.
