Index description

The MSCI World ex Australia ex Tobacco ex Controversial Weapons Index ('Index') captures large and mid-cap representation across 22 of 23 developed markets countries (excluding Australia). With approximately 1,570 constituents, the Index covers approximately 85% of the free float-adjusted market capitalisation in each country. The Index excludes companies with significant business activities involving tobacco and those engaged in the production of cluster bombs, landmines, chemical and biological weapons and depleted uranium weapons. Constituent selection is based on data from MSCI research.

Ethical and environmental considerations

UBS Asset Management (Australia) Ltd selection of investments in the Fund is based on the composition of the underlying Index.

The Fund adopts a passive investment strategy, designed to track the performance of the MSCI World ex Australia ex Tobacco ex Controversial Weapons Index (before fees and expenses). The UBS IQ MSCI World ex Australia Ethical ETF includes the word 'ethical' solely because the underlying Index excludes from its Parent Index securities issued by companies with significant business activities involving tobacco and those engaged in the production of cluster bombs, landmines, chemical and biological weapons and depleted uranium weapons.

This exclusion is the sole difference between the Index for the Fund and its Parent Index.
