## Index description

The MSCI Japan ex Tobacco ex Controversial Weapons Index ('Index') is designed to measure the performance of the large and mid cap segments of the Japan market. With approximately 320 constituents, the Index covers approximately 85% of the free float-adjusted market capitalisation in Japan. The Index excludes companies with significant business activities involving tobacco and those engaged in the production of cluster bombs, landmines, chemical and biological weapons and depleted uranium weapons. Constituent selection is based on data from MSCI research.

## Ethical and environmental considerations

UBS Asset Management (Australia) Ltd selection of investments in the Fund is based on the composition of the underlying Index.

The Fund adopts a passive investment strategy, designed to track the performance of the MSCI Japan ex Tobacco ex Controversial Weapons Index (before fees and expenses). The UBS IQ MSCI Japan Ethical ETF includes the word «ethical» solely because the underlying Index excludes from its Parent Index securities issued by companies with significant business activities involving tobacco and those engaged in the production of cluster bombs, landmines, chemical and biological weapons and depleted uranium weapons.

This exclusion is the sole difference between the Index for the Fund and its Parent Index.

## UBS Exchange Traded Funds

UBS Asset Management has a long-term track record of providing index-based investment solutions to clients. The first UBS ETF was launched in Europe in 2001. Since then UBS has launched over 288 ETFs globally, with funds under management in excess of AUD 77 billion at 30 June 2019. The UBS Australian ETF platform was established in 2012. UBS ETFs are managed by an experienced asset manager, UBS Asset Management, with a long-term commitment to passive management (managing passive assets for 30 years).
