III. Liquidity Provider's Last Look window maximum and minimum length (in m/s)

UBS responds to FX transaction requests from both disclosed counterparties and electronic trading platforms through which UBS trades anonymously generally within 5 milliseconds from the time a counterparty's FX transaction request is received by UBS. UBS does not apply any additional delays or latency buffers as part of the Last Look process. Additionally, UBS employs a timeout of 1 second to ensure prompt response in the event of a technological limitation.

Liquidity Provider may briefly describe the circumstances under which Last Look window times may change

UBS employs a maximum timeout of 1 second, after which a response is automatically generated, to ensure prompt response in the event of a technological limitation. Counterparties can opt out of such a timeout and/or agree on a longer duration for the timeout.

The typical response time for FX transaction requests experienced by individual counterparties may vary based on reasons including but not limited to the nature of the product transacted and counterparty credit settings. At present the timeout is not available for FX options.
