Form 6-K

**REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16
UNDER THE SECURITIES EXCHANGE ACT OF 1934**

August 5, 2010

Commission File Number 001-15244

CREDIT SUISSE GROUP AG

(Translation of registrant's name into English)

Paradeplatz 8, P.O. Box 1, CH-8070 Zurich, Switzerland
(Address of principal executive office)

Indicate by check mark whether the registrant files or will file annual reports under cover of Form 20-F or Form 40-F.

Form 20-F ☒

Form 40-F ☐

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

Note: Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

Note: Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's "home country"), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes ☐

No ☒

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82-

Explanatory note

This report on Form 6-K is filed solely to supplement the Credit Suisse Financial Release 2Q10, which was filed in our report on Form 6-K on July 23, 2010, primarily to include further disclosures on fair valuations and, in connection with the condensed consolidated financial statements, further disclosures on fair value of financial instruments, derivatives and hedging activities, investment securities, assets pledged or assigned, transfers of financial assets and variable interest entities and the review report from Credit Suisse's independent registered public accounting firm.

This report on Form 6-K (including the exhibits hereto) is hereby incorporated by reference into the Registration Statement on Form F-3 (file no. 333-158199).

¹ Based on amounts attributable to shareholders. ² Tangible shareholders' equity attributable to shareholders is calculated by deducting goodwill and other intangible assets from total shareholders' equity attributable to shareholders.

Dear shareholders

Brady W. Dougan, Chief Executive Officer (left) and Hans-Ulrich Doerig, Chairman of the Board of Directors. In the background is a portrait of Alfred Escher, who founded Credit Suisse in 1856.

Our results for the second quarter of 2010 provide further evidence that our client-focused, capital-efficient strategy and reduced-risk business model can generate sustainable earnings even in more challenging markets. Despite continued volatility and subdued client activity, we were able to continue acquiring strong net new assets in Private Banking and maintain market share momentum, particularly in Investment Banking. We achieved net income of CHF 1.6 billion, a return on equity of 17.8% and an industry-leading capital position: our tier 1 ratio was 16.3% at the end of the second quarter.

Performance of our businesses

Private Banking delivered solid pre-tax income of CHF 874 million and attracted net new assets of CHF 13.8 billion, with strong inflows in our international businesses. The results were achieved despite continuing concerns about the macro-economic environment. This uncertainty caused clients to reduce risk exposures and avoid investments in more complex products. Long term, the prospects for the wealth management industry remain attractive, as economic development – especially the potential for wealth generation in emerging markets and the ongoing generational transfer of wealth – creates opportunities for Credit Suisse. The quarter saw a strong performance from our Corporate & Institutional Clients business in Switzerland with market share gains in our institutional business and good net new assets.

Investment Banking has shown its resilience in a difficult market environment, recording pre-tax income of CHF 784 million. Total revenues declined due to weaker fixed income sales and trading revenues but we saw a strong performance from our equity business with continued market share gains, and a solid performance from our advisory and underwriting business. During the quarter we maintained our focus on the disciplined allocation of capital and investment in client businesses. For example, we entered into an agreement to acquire a prime fund solutions business, which will further strengthen our prime services franchise by enabling us to offer a more complete product suite to our hedge fund clients. We maintained market share momentum across most products and regions and made significant progress in expanding our distribution capabilities in our securities business. In addition, we extended our strong position in equities, strengthened our advisory and underwriting franchises and continued to focus on growing our leading emerging markets platform.

Asset Management reported pre-tax income of CHF 22 million and maintained a positive trend in asset inflows for the fourth quarter in succession, with net new assets of CHF 1.3 billion in the second quarter. We will focus on building on this encouraging trend and on growing this core business.

Positioned to succeed in new industry landscape

As a testament to the successful execution of our strategy and to our ability to generate high returns on a reduced-risk business model, Credit Suisse was recognized as Best Global Bank in 2010 by *Euromoney* magazine. We were also named Best Emerging Markets Investment Bank and received a further 14 regional and country awards in the Switzerland, Europe, Middle East and Africa, Americas and Asia Pacific regions, which underscores the depth and breadth of our global footprint.

Credit Suisse's strong position, including its solid capital and liquidity base, reflects the decisive steps we took in response to the new operating environment. We anticipated many of the regulatory changes at an early stage and took prompt and aggressive action to realign our strategy and business model. This included cutting risk exposures, moving out of a variety of capital-intensive areas and developing leading approaches to compliance, cross-border business and investor protection. We are focused on performance, products and client solutions that only a global, integrated bank can offer. Net new asset trends in the second quarter have confirmed the effectiveness of our international multi-shore platform, which serves clients with multiple domiciles – whose needs are

best met by a blend of onshore and offshore capabilities – as well as clients who are focused on geographical risk diversification. We are actively contributing to industry efforts to build a more robust and stable financial system by helping clients in adverse market conditions and engaging in an open and constructive dialog with regulators to promote a coordinated global approach to banking supervision.

Outlook

Despite the continuing macroeconomic uncertainty, in the first half of 2010 we achieved a return on equity of 20% while making further substantial progress developing our businesses. We remain confident that our strategy is appropriate and resilient in the face of an uncertain and challenging economic and market environment.

Yours sincerely

Hans-Ulrich Doerig
July 2010

Financial Report

2Q 10

For purposes of this report, unless the context otherwise requires, the terms "Credit Suisse," "the Group," "we," "us" and "our" mean Credit Suisse Group AG and its consolidated subsidiaries. The business of Credit Suisse AG, the Swiss bank subsidiary of the Group, is substantially similar to the Group, and we use these terms to refer to both when the subject is the same or substantially similar. We use the term "the Bank" when we are only referring to Credit Suisse AG, the Swiss bank subsidiary of the Group, and its consolidated subsidiaries.

In various tables, use of "-" indicates not meaningful or not applicable.

Credit Suisse at a glance

Credit Suisse

As one of the world's leading financial services providers, we are committed to delivering our combined financial experience and expertise to corporate, institutional and government clients and to high-net-worth individuals worldwide, as well as to private clients in Switzerland. Founded in 1856, we have a truly global reach today, with operations in over 50 countries and 49,200 employees from approximately 100 different nations. This worldwide reach enables us to generate a geographically balanced stream of revenues and net new assets and allows us to capture growth opportunities wherever they are. We serve our diverse clients through our three divisions, which cooperate closely to provide holistic financial solutions based on innovative products and specially tailored advice.

Private Banking

Private Banking offers comprehensive advice and a wide range of financial solutions to private, corporate and institutional clients. The Private Banking division comprises the Wealth Management Clients and Corporate & Institutional Clients businesses. In Wealth Management Clients we serve ultra-high-net-worth and high-net-worth individuals around the globe and private clients in Switzerland. Our Corporate & Institutional Clients business serves the needs of corporations and institutional clients, mainly in Switzerland.

Investment Banking

Investment Banking provides a broad range of financial products and services, including global securities sales, trading and execution, prime brokerage and capital raising services, corporate advisory and comprehensive investment research, with a focus on businesses that are client-driven, flow-based and capital-efficient. Clients include corporations, governments, institutional investors, including hedge funds, and private individuals around the world. Credit Suisse delivers its investment banking capabilities via regional and local teams based in major global financial centers. Strongly anchored in Credit Suisse's integrated model, Investment Banking works closely with the Private Banking and Asset Management divisions to provide clients with customized financial solutions.

Asset Management

Asset Management offers a wide range of investment products and solutions across asset classes, for all investment styles. The division manages global and regional portfolios, separate accounts, mutual funds and other investment vehicles for governments, institutions, corporations and individuals worldwide. Asset Management focuses on becoming a global leader in multi-asset class solutions as well as in alternative investments. To deliver the bank's best investment performance, Asset Management operates as a global integrated network in close collaboration with the Private Banking and Investment Banking divisions.

Credit Suisse results

6 Operating environment

10 Credit Suisse

12 Core Results

20 Key performance indicators

Operating environment

Financial markets were dominated by concerns about the sustainability of public finances and sovereign debt risk in the euro zone. The global economic recovery continued, led by emerging markets. Equity markets ended the quarter significantly lower and volatility increased compared to 1Q10. Sovereign bond and currency markets were affected by a flight to quality. The US dollar appreciated against most major currencies in 2Q10, and the Swiss franc reached a record high against the euro.

Economic environment

The global economic recovery continued in 2Q10, led by emerging markets, particularly in Asia. Gross domestic product (GDP) had another quarter of expansion in the US, with inventories remaining an important driver. Most European countries had continued growth, apart from Greece, which remained in recession due to the government's fiscal consolidation measures. Leading indicators continued rising in many countries, in both developed and emerging markets, with some indicators reaching record highs.

Sovereign debt concerns in Europe dominated financial markets in 2Q10. In early April, European governments signaled they would provide EUR 30 billion to Greece in return for austerity measures. The size of the aid package was expanded to EUR 110 billion in May, with a EUR 30 billion contribution

by the International Monetary Fund (IMF). Despite the announcement of the aid package, yields on Greek government bonds continued rising and concern grew over the sovereign debt risk of Spain and Portugal. Euro zone leaders announced a EUR 750 billion aid package for troubled euro zone governments, including a EUR 250 billion contribution from the IMF. Further support came from the European Central Bank (ECB), which pledged to buy euro zone government bonds.

Inflationary pressures remained subdued in most developed countries. While energy-related effects kept headline inflation rates at elevated levels, core inflation rates reached multi-year lows in the euro zone and the US. In a few European countries (Ireland, Portugal and Spain), core inflation was negative during the quarter. In contrast, China's inflation crept higher.

Yield curves

Yields trended further down in 2Q10 across all maturities.

Source: Datastream, Credit Suisse

Equity markets

Most equity markets ended 2Q10 sharply lower. Volatility increased due to sovereign debt concerns.

Divergence in monetary policy continued. Chinese authorities further raised the reserve requirement ratio for banks, and various central banks around the globe started increasing interest rates (Australia, Brazil and Canada). However, monetary policy in most developed countries remained expansionary. The US Federal Reserve (Fed) maintained its target for short-term interest rates near zero and continued to anticipate that economic conditions would warrant exceptionally low

interest rates for an extended period. Similarly, the ECB kept short term-interest rates unchanged at a record low of 1%, and the Bank of England (BoE) signaled that it would not tighten monetary policy for at least a year. The ECB temporarily re-introduced some emergency lending facilities it had planned to discontinue.

Equity markets fell sharply (down 12% for the S&P 500 and 11% for the Swiss Market Index), and the VIX volatility index jumped to levels not seen since March 2009, as the contagion from the euro zone sovereign bond market and fears over measures to slow down the Chinese property market led to significant de-risking and unwinding of positions. Equity indices in emerging markets outperformed developed regions with emerging markets in Asia falling 3% (refer to the charts "Equity markets").

Bond yields in major markets declined further in 2Q10. The yield on two-year treasuries declined to a record low of 0.6% and the yield on ten-year treasuries fell below 3%. Significant volatility persisted across markets. The yield curve remained steep in most major currencies. Short-term yields continued to be supported by the low central bank rates, and the yield curve was driven by the long end (refer to the charts "Yield curves"). However, in Switzerland the yield curve flattened somewhat. The TED spread (the difference between three-month LIBOR and T-Bills) widened as liquidity was reduced due to increased risk aversion in the interbank lending market. However, the level remained far below the highs seen in 2008. Credit spreads in the US and Europe widened compared to 1Q10, reflecting the uncertainty with regard to sovereign debt risk (refer to the charts "Credit spreads").

Credit spreads

Credit spreads in the US and Europe increased further in 2Q10 mainly due to sovereign debt concerns.

Currency markets reflected the sovereign credit concerns in the euro zone and heightened risk aversion. The Swiss franc continued to strengthen against the euro, although the Swiss National Bank (SNB) intervened heavily in the currency market to prevent excessive appreciation. At the end of the quarter, the SNB became more confident about the economic recovery and reduced its intervention. The Swiss franc depreciated 2% against the US dollar. The US dollar appreciated in 2Q10 against the euro and British pound. Lower commodity prices impacted commodity-linked currencies such as the Australian and Canadian dollars, which ended the quarter 8% and 5% lower against the US dollar. The yen appreciated against the US dollar due to its safe haven status and narrowing interest rate differentials. The renminbi strengthened against the US dollar, reflecting the announcement of the resumption of a controlled float of the renminbi.

Most commodity prices fell in 2Q10, reflecting decreased risk appetite and severe selling pressure. Cyclical markets such as energy and industrial metals were particularly affected, and prices fell sharply. Oil prices fell from above USD 85 to below USD 67 per barrel during the quarter. Agricultural markets ended the quarter almost unchanged. Gold prices benefited from strong demand and low interest rates and reached record highs in June.

Sector environment

2Q10 continued to be very volatile for the banking sector. European banks stocks fell over 25% from their quarterly high in mid-April 2010. Sovereign debt concerns about Greece and contagion fears regarding Ireland, Portugal and Spain negatively impacted investor confidence. Market participants demanded more transparency on sovereign debt and retail banking exposure for these countries.

Despite significant long-term funding needs, especially for many European banks, long-term debt issuances by banks remained subdued in 2Q10, affected by the sovereign debt problems and higher interbank lending rates.

The total global fee pool was down 12% compared to 1Q10 and down 16% compared to 2Q09. Equity capital markets contributed 30%, followed by debt capital markets with 27% and mergers and acquisitions (M&A) with 26%. Loans accounted for 17% of the global fee pool. Equity capital markets were mainly affected by a slowdown in initial public offering (IPO) activity and weak secondary offerings. North America contributed more than half the fee pool. Europe's share of the global fee pool was 24% compared to 27% in 1Q10 and 34% in 2Q09. Equity trading activities picked up significantly in May 2010. However, in June volumes recorded at most of the exchanges were at lower levels than during April and May. Activity in global fixed income trading remained sluggish in June compared to May. Compared to 1Q10, global fixed income trading volume was considerably lower due to a 19% decline in Europe. Global equity underwriting fees were down 10%. Compared to 2Q09, equity underwriting declined 43%, despite strong activity in the IPO market (primarily driven by China), as secondary offerings remained weak. Global debt underwriting declined 35% compared to 1Q10 and 28% compared to 2Q09, due to a lack of new issuances and subdued activity in the secondary market.

Hedge funds had solid inflows in 2Q10. Global hedge fund assets exceeded the USD 1.5 trillion level, of which North American hedge funds contributed USD 1.0 trillion. Most strategies suffered in May due to the steep equity decline in the beginning of May, and market turbulence related to euro zone sovereign debt concerns. Hedge funds lost 2% in 2Q10. Equity long/short, emerging markets, event driven and equity market neutral hedge funds had the weakest performance and

delivered negative returns. Global macro and fixed income arbitrage funds achieved positive returns.

The wealth management sector suffered from a loss of investor confidence in 2Q10, and the sustainability of public finances and sovereign debt risk became a focus for investors and banking clients. Risk-averse investors continued to demand less complex financial products. Foreign currency weakness had a negative impact for institutions reporting in strong home currencies such as the Swiss franc. In line with calls by the G-20 for increased fairness and transparency in the global tax system, implementation of OECD standards

continued in 2Q10. The wealth management industry continued to evolve, reflecting increasing requirements relating to investment advice, client information, documentation and cross-border compliance. Retail banking in Switzerland reflected strong competition in the mortgage business, resulting in continued margin pressure.

Regulators and governments continued to discuss regulatory reform, capital and liquidity requirements, compensation and systemic risk. For further information, refer to — Core results — Regulatory proposals and developments.

Credit Suisse

In 2Q10, we recorded net income attributable to shareholders of CHF 1,593 million. Diluted earnings per share were CHF 1.15. Annualized return on equity attributable to shareholders was 17.8%. Our capital position remained strong with a BIS tier 1 ratio of 16.3%.

¹ Based on tangible shareholders' equity attributable to shareholders, which is calculated by deducting goodwill and other intangible assets from total shareholders' equity attributable to shareholders. Management believes that the return on tangible shareholders' equity attributable to shareholders is meaningful as it allows consistent measurement of the performance of businesses without regard to whether the businesses were acquired.

Credit Suisse reporting structure

Credit Suisse results include revenues and expenses from the consolidation of certain private equity funds and other entities in which we have noncontrolling interests without significant economic interest (SEI) in such revenues and expenses. Core Results include the results of our three segments and the Corporate Center and discontinued operations, but do not include noncontrolling interests without SEI.

Wealth Management Clients	Corporate & Institutional Clients				

Core Results

In 2Q10, we recorded net income attributable to shareholders of CHF 1,593 million. Private Banking reported solid income before taxes and strong net new assets of CHF 13.8 billion, particularly from international businesses. Investment Banking results were impacted by volatile market conditions with lower fixed income sales and trading results, but solid equity sales and trading results and resilient underwriting and advisory revenues. Asset Management had stable fee revenues, investment-related gains, fully liquidated its balance sheet exposure to securities purchased from money market funds and maintained a positive trend in net new assets over the past four quarters. Corporate Center income before taxes of CHF 126 million reflected significant fair value gains on own debt, due to widening credit spreads, and significant expenses, including the UK levy on variable compensation.

Core Results include the results of our three segments, the Corporate Center and discontinued operations. Core Results exclude revenues and expenses in respect of noncontrolling interests in which we do not have SEI. The Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. In addition, the Corporate Center includes consolidation and elimination adjustments required to eliminate inter-company revenues and expenses.

Our Core Results are impacted by changes in credit spreads on Credit Suisse vanilla debt carried at fair value. The cumulative fair value gains of CHF 1.5 billion on Credit Suisse debt as of the opening 1Q10 balance sheet are reversed and charged to the segments on a straight-line amortization basis, and the difference between this amortization and the valuation adjustments on this Credit Suisse debt from changes in credit spreads is included in the Corporate Center. For further information, refer to I – Credit Suisse results – Core Results – Accounting changes adopted in 1Q10 in the Credit Suisse Financial Report 1Q10 and II – Operating and financial review – Core Results in the Credit Suisse Annual Report 2009.

In managing the business, revenues are evaluated in the aggregate, including an assessment of trading gains and losses and the related interest income and expense from financing and hedging positions. For this reason, individual revenue categories may not be indicative of performance.

Certain reclassifications have been made to prior periods to conform to the current presentation.

Results overview

In 2Q10, we recorded net income attributable to shareholders of CHF 1,593 million compared to CHF 1,571 million in 2Q09. Net revenues were CHF 8,420 million compared to CHF 8,610 million in 2Q09. Total operating expenses were CHF 6,594 million compared to CHF 6,736 million in 2Q09. Our 2Q10 results included fair value gains of CHF 855 million on Credit Suisse debt. CHF 67 million of fair value losses were charged to the segments (primarily Investment Banking), reflecting the straight-line amortization, and CHF 922 million of fair value gains were included in the Corporate Center.

In **Private Banking**, net revenues of CHF 2,991 million were stable. Recurring revenues, representing 77% of net revenues, were up 3%. Recurring commissions and fees increased 7%, driven by higher management, investment advisory and security account fees, primarily reflecting the 14.2% increase in average assets under management, partly offset by lower performance fees. Recurring commissions and fees

reflected the ongoing cautious investor behavior and investments in less complex, lower-margin products, also within managed investment products. Net interest income was stable, reflecting the ongoing low interest rate environment in the economic cycle. Deposit margins were stable on slightly higher average volumes, and loan margins were slightly lower on slightly higher average volumes. Transaction-based revenues decreased 4%, mainly due to significantly lower integrated solutions revenues compared to a strong 2Q09, partially offset by higher foreign exchange income from client transactions and brokerage fees, reflecting increased market volatility in 2Q10. Transaction-based revenues included lower fair value losses on the Clock Finance transaction.

In **Investment Banking**, net revenues decreased to CHF 4,099 million from CHF 6,011 million in 2Q09. Most of the businesses were adversely impacted by macro-economic issues, leading to client risk aversion, reduced client activity and market volatility. Revenues in 2Q10 declined due to weaker fixed income sales and trading revenues, but this decline was partially offset by solid equity sales and trading results and resilient underwriting and advisory revenues, as market share gains largely mitigated the impact of an industry-wide decline in debt and equity issuance. Fixed income sales and trading results were driven by solid revenues in our US residential mortgage-backed securities (RMBS) trading, global rates and foreign exchange businesses. Revenues in our credit businesses were adversely impacted by the difficult market conditions, including widening credit spreads. Revenues in our emerging markets trading and corporate lending businesses were adversely impacted by client risk aversion and widening credit spreads. Equity sales and trading revenues declined compared to a strong 2Q09, but were solid, reflecting sustained market share gains across most products, strong revenues in cash equities and prime services and solid revenues in our derivatives business. Fair value losses on Credit Suisse debt were CHF 62 million compared to net fair value losses of CHF 269 million in 2Q09.

In **Asset Management**, net revenues of CHF 502 million were up CHF 68 million, including investment-related gains compared to losses in 2Q09. Net revenues before securities purchased from our money market funds and investment-related gains/(losses) were CHF 420 million, stable compared to 2Q09. Fee revenues were stable compared to 2Q09, as higher asset management, placement, transaction and other fees were offset by lower performance fees and carried interest. Asset management fees of CHF 360 million were up 6%, primarily reflecting higher average assets under management in alternative investments and multi-asset class solutions. Average assets under management increased 6.5% compared to 2Q09. Placement, transaction and other fees were up 34%.

Performance fees and carried interest were down significantly, primarily due to lower semi-annual performance fees from Hedging-Griffo as a result of challenging market conditions. Equity participations revenues were down, mainly due to gains of CHF 21 million in 2Q09 as a result of the closing of the first part of the transaction with Aberdeen Asset Management (Aberdeen). Investment-related gains were CHF 46 million, compared to losses of CHF 28 million in 2Q09. Other revenues increased CHF 10 million, reflecting lower allocated funding costs and gains from the sale of non-core businesses in Australia, partially offset by slightly lower gains from securities purchased from our money market funds.

For further information on Private Banking, Investment Banking and Asset Management, refer to II – Results by division.

Corporate Center income before taxes was CHF 126 million, primarily reflecting fair value gains on Credit Suisse debt of CHF 922 million and significantly higher expenses, including compensation expense of CHF 447 million due to the UK levy on variable compensation and CHF 216 million of litigation provisions.

Provision for credit losses was CHF 20 million in 2Q10, with net provisions of CHF 17 million in Investment Banking and net provisions of CHF 3 million in Private Banking.

A significant portion of our business requires inter-regional coordination in order to facilitate the needs of our clients. The methodology for allocating our results by region is dependent on management judgment. For Private Banking, results are allocated based on the management reporting structure of our relationship managers and the region where the transaction is recorded. For Investment Banking, trading results are allocated based on where the risk is primarily managed and fee-based results are allocated where the client is domiciled. For Asset Management, results are allocated based on the location of the investment advisors and sales teams.

Total operating expenses of CHF 6,594 million were down 2% compared to 2Q09, as lower compensation and benefits more than offset higher general and administrative expenses. The decline in compensation and benefits was primarily due to lower performance-related compensation in Investment Banking, reflecting lower risk-adjusted profitability, partly offset by the CHF 447 million for the UK levy on variable compensation included in Corporate Center, increased base salaries, headcount and social security expenses. The increase in social security expenses reflected increased base salaries, headcount and share award deliveries. The increase in general and administrative expenses was due to an increase in professional fees, information technology (IT) and travel and entertainment expenses, driven by an increase in client-related businesses and activity, partially offset by lower litigation provisions. 2Q09 included CHF 383 million of litigation charges in Investment Banking, primarily related to the settlement of litigation with Huntsman Corporation.

The **Core Results effective tax rate** was 10.4% in 2Q10, compared to 28.6% in 1Q10. The effective tax rate was mainly due to a CHF 522 million benefit from a legal entity merger, reflecting regulatory concerns about complex holding structures, offset in part by the non-tax deductibility of

the UK levy on variable compensation in 2Q10. Excluding these items, the effective tax rate would have been 28.5% in 2Q10. Overall, net deferred tax assets increased CHF 186 million to CHF 10,218 million as of the end of 2Q10. Excluding foreign exchange translation gains and the effect of the legal entity merger, net deferred tax assets decreased CHF 411 million, primarily as a result of temporary differences and taxable income in 2Q10.

Assets under management were CHF 1,242.6 billion as of the end of 2Q10, a decrease of CHF 28.3 billion, or 2.2%, compared to the end of 1Q10. The decrease reflected negative market performance and adverse foreign exchange-related movements, partially offset by net new assets of CHF 13.8 billion in Private Banking and CHF 1.3 billion in Asset Management.

As part of the ongoing review to improve risk management approaches and methodologies, we implemented a revised value-at-risk (VaR) measure for risk management purposes. This revised VaR, which we call risk management VaR, adjusts VaR in cases where short-term market volatility over a six-month period is different than long-term volatility in a three-year dataset. For more information, refer to IV – Treasury and Risk management – Risk management.

Board of Directors and management changes

At our Annual General Meeting in April 2010, shareholders approved the re-election of Noreen Doyle, Aziz R. D. Syriani, David W. Syz, and Peter F. Weibel and the election of two new members to the Board of Directors, Jassim Bin Hamad J. J. Al Thani, Chairman of the Board of Directors of Qatar Islamic Bank, and Robert H. Benmosche, President and CEO of American International Group, Inc.

In April 2010, we announced that Renato Fassbind will retire as CFO on October 1, 2010, and David Mathers, who has served as the Chief Operating Officer and Head of Finance for Investment Banking, will assume the role. Renato Fassbind will remain with Credit Suisse as a senior advisor.

As of July 1, 2010, Paul Calello was appointed Chairman of Investment Banking, and Eric Varvel succeeded him as CEO. Fawzi Kyriakos-Saad, former CEO of Russia, the countries of the Commonwealth of Independent States and Turkey, and Co-Head of the Global Emerging Markets Council, succeeded Eric Varvel as CEO of Europe, Middle East and Africa (EMEA). Antonio Quintella, former CEO of Brazil and Co-Head of the Global Emerging Markets Council, became CEO of Americas, succeeding Rob Shafir, who will remain CEO of Asset Management.

Regulatory proposals and developments

Government leaders and regulators continued to focus on reform of the financial services industry, including capital, leverage and liquidity requirements, changes in compensation practices and systemic risk. G-20 leaders pledged to increase regulation and improve coordination of oversight of banks and financial institutions.

In December 2009, the Basel Committee on Banking Supervision (BCBS) published consultative proposals to strengthen the resilience of the banking sector (known as Basel III). The proposals are aimed at strengthening capital and liquidity regulations. The BCBS proposals are not expected to be finalized until later in 2010. The BCBS is conducting an impact assessment following submissions from the industry. Final BCBS requirements are expected to be implemented over a period of time. The impact of these proposals on us will be assessed as the details and timing of the implementation are clarified. In June 2010, the BCBS announced its decision to postpone to no later than December 31, 2011 the implementation of the revisions to the Basel II market risk framework. The Swiss Financial Market Supervisory Authority (FINMA) has indicated that it expects to implement the revisions related to risk-weighted assets (RWAs) and eligible cap-

ital by the original implementation date of January 2011 for FINMA regulatory capital purposes. The final BCBS requirements may be adjusted when implemented by FINMA and our other regulators.

In April 2010, we agreed on liquidity principles with the FINMA, following its consultation with the SNB, to ensure that the Group and the Bank have adequate holdings on a consolidated basis of liquid, unencumbered, high quality securities available for designated periods of time in a crisis situation. The principles went into effect as of the end of 2Q10. For further information, refer to IV – Treasury and Risk management – Treasury management.

In July 2010, the US enacted the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Reform Act). Although the Reform Act provides a broad framework for regulatory changes, implementation will require further detailed rulemaking over several years by different regulators, including the Department of the Treasury, the Fed, the Securities and Exchange Commission (SEC), the Federal Deposit Insurance Corporation, the Commodity Futures Trading Commission and the newly created Financial Stability Oversight Council. The Reform Act authorizes assessments on financial institutions with USD 50 billion or more in consolidated assets, will limit the ability of banking entities to sponsor or invest in private equity or hedge funds (including an aggregate investment limit of 3% of tier 1 capital) or to engage in certain types of proprietary trading unrelated to serving clients, and provides regulators with tools to provide greater capital, leverage and liquidity requirements and other prudential standards, particularly for financial institutions that pose significant systemic risk. In addition, the Reform Act will create an extensive framework for the regulation of over-the-counter derivatives and requires broader regulation of hedge funds and private equity funds, as well as credit agencies. Implementation of the Reform Act and related final regulations could result in additional costs or limit or restrict the way we conduct our business, although uncertainty remains about the details, impact and timing.

EU leaders have agreed that member states should impose a levy on financial institutions to ensure fair burden-sharing and create incentives to contain systemic risks. While there is currently no consensus among member states on details of how the levies should be designed, the UK, Germany and France have said they would impose such levies. In June 2010, the UK proposed a levy attributable to the UK operations of large banks on certain short-term funding. If adopted, a four basis point levy would be imposed on such liabilities in 2011, with the rate rising to seven basis points in 2012.

In July 2010, the European Parliament approved amendments to the Capital Requirements Directive, including restrictions on the bonuses of senior management and certain other

employees who could have a material impact on risk. These restrictions include limiting the portion that may be paid initially in cash and imposing deferrals and “at risk” requirements for a large portion of such bonuses. The amended directive will require member states to adopt national rules ensuring that institutions have compliant remuneration principles by January 2011, which are applicable to compensation awarded for services in 2010.

Other governmental bodies are considering imposing taxes on, or limiting the tax deductibility of, certain large bonuses.

As these and other financial reform proposals are considered, we believe the regulatory response must be closely coordinated on an international basis to provide a level playing field and must be carefully balanced to ensure a strong financial sector and global economy. We believe we are well positioned for regulatory reform, as we have reduced risk and maintained strong capital, funding and liquidity.

Legal proceedings

Credit Suisse is involved in a number of judicial, regulatory and arbitration proceedings concerning matters arising in connection with the conduct of its businesses. Some of these actions have been brought on behalf of various classes of claimants and seek damages of material and/or indeterminate amounts. Credit Suisse believes, based on currently available information and advice of counsel, that the results of such proceedings, in the aggregate, will not have a material adverse effect on its financial condition, but might be material to operating results for any particular period, depending in part, upon the operating results for such period. For further information on Credit Suisse's legal proceedings, refer to IX – Additional Information – Legal proceedings in the Credit Suisse Annual Report 2009.

German data matter

German authorities have initiated an investigation that deals with possible tax evasion by Credit Suisse clients and alleges assistance in such tax evasion by unnamed Credit Suisse employees. According to the media, approximately 1,100 clients are involved, and the information is reported to have come from a CD Rom acquired by the German authorities. The German authorities have conducted searches of the offices of Credit Suisse (Germany) AG and its branches and have taken information in connection with this investigation. We are cooperating with the relevant governmental authorities in this matter.

We believe Credit Suisse has been the victim of a data theft or otherwise had certain client information acquired, and we have filed criminal charges against the individuals who committed the data theft, who are currently unknown. We are conducting an internal review to determine how this information was obtained. We believe our data security and other similar controls are effective.

We take this matter very seriously and are dealing with the issues in an appropriate manner reflecting our legal obligations and the interests of our clients, employees and the firm.

Compensation and benefits

Compensation and benefits for a given year reflect the strength and breadth of the business results and staffing levels and include fixed components, such as salaries, benefits and the amortization of share-based and other deferred compensation from prior-year awards, and a variable component. The variable component reflects the performance-based compensation for the current year. The portion of the performance-based compensation for the current year deferred through share-based and other awards is expensed in future periods and is subject to vesting and other conditions.

Our shareholders' equity reflects the effect of share-based compensation, including the impact of related share repurchases and other hedging activities. Equity is generally unaffected by the granting and vesting of share-based awards, as share-based compensation expense (which is generally based on fair value at the time of grant) reduces equity, however the recognition of the obligation to deliver the shares increases equity by a corresponding amount. When Credit Suisse purchases shares from the market to meet its obligation to employees, these purchased treasury shares reduce equity by the amount of the purchase price. Treasury shares are managed in aggregate and are not allocated to specific obligations under any particular share-based compensation program. Shareholders' equity also includes, as additional paid-in capital, the excess tax benefits/charges that arise at settlement of share-based awards. For further information, refer to the Consolidated statements of changes in equity in V – Condensed consolidated financial statements (unaudited) and Note 20 – Employee share-based compensation and other compensation benefits and Note 25 – Tax – Tax benefits associated with share-based compensation in V – Consolidated Financial Statements – Credit Suisse Group in the Credit Suisse Annual Report 2009.

Funding

We centrally manage our funding activities. New securities for funding and capital purposes are issued primarily by the Bank. The Bank lends funds to our operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to capitalize on opportunities. Capital is distributed to the segments considering factors such as regulatory capital requirements, utilized economic capital and the historic and future potential return on capital.

Transfer pricing, using market rates, is used to record net revenues and expense in each of the segments for this capital and funding. Our funds transfer pricing system is designed to allocate to our businesses funding costs in a way that incentivizes their efficient use of funding. Our funds transfer pricing system is an essential tool that allocates to the businesses the short-term and long-term costs of funding their balance sheet and the costs associated with funding liquidity and balance sheet items, such as goodwill, which are beyond the control of individual businesses. This is of greater importance in a stressed capital markets environment where raising funds is more challenging and expensive. Under this system, our businesses are also credited to the extent they provide long-term stable funding.

Fair valuations

Fair value can be a relevant measurement for financial instruments when it aligns the accounting for these instruments with how we manage our business. The levels of the fair value hierarchy as defined by the relevant accounting guidance are not a measurement of economic risk, but rather an indication of the observability of prices or valuation inputs. For further information, refer to Note 1 – Summary of significant accounting policies and Note 25 – Fair value of financial instruments in V – Condensed consolidated financial statements – unaudited.

The fair value of the majority of the Group's financial instruments is based on quoted prices in active markets (level 1) or observable inputs (level 2). These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain over-the-counter (OTC) derivative instruments and most listed equity securities.

In addition, the Group holds financial instruments for which no prices are available and which have little or no observable inputs (level 3). For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgment depending on liquidity, concentration, pricing assumptions and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These instruments include certain high yield debt securities, distressed debt securities, certain OTC derivatives, certain collateralized debt obligations (CDO), certain asset-backed and mortgage-backed securities, non-traded equity securities, private equity and other long-term investments.

Models were used to value these products. Models are developed internally and are reviewed by functions independent of the front office to ensure they are appropriate for current market conditions. The models require subjective assessment and varying degrees of judgment depending on liquidity, concentration, pricing assumptions and risks affecting the specific instrument. The models consider observable and unobservable parameters in calculating the value of these products, including certain indices relating to these products. Consideration of these indices is more significant in periods of lower market activity.

As of the end of 2Q10, 55% and 43% of our total assets and total liabilities attributable to shareholders, respectively, were measured at fair value and our level 3 assets attributable to shareholders were CHF 48.4 billion. As of the end of 2Q10, 4% of total assets attributable to shareholders were classified as level 3 assets attributable to shareholders, compared to 5% as of the end of 1Q10. As of the end of 2Q10, 8% of total assets attributable to shareholders measured at fair value were recorded as level 3 assets attributable to shareholders, unchanged from 1Q10.

While the majority of our level 3 assets are recorded in Investment Banking, some are recorded in Asset Management, specifically certain private equity investments. Total assets at fair value recorded as level 3 increased by CHF 0.9 billion during 2Q10, primarily reflecting the US dollar translation impact against the Swiss franc.

We believe that the range of any valuation uncertainty, in the aggregate, would not be material to our financial condition.

Number of employees by division

	end of			% change	
	2Q10	1Q10	2Q09	QoQ	YoY
Number of employees by division (full-time equivalents)					
Private Banking	24,900	24,600	24,000	1	4
Investment Banking	20,600	20,000	18,800	3	10
Asset Management	2,800	2,900	3,200	(3)	(13)
Corporate Center	900	800	700	13	29
Number of employees	49,200	48,300	46,700	2	5

Personnel

Headcount at the end of 2Q10 was 49,200, up 2,500 from 2Q09 and up 900 from 1Q10. The increase was mainly in IT professionals supporting firmwide growth and in strategic growth businesses in Private Banking and Investment Banking. The increase in IT professionals reflected increasing geographic and regulatory requirements in conducting our businesses globally as well as the IT-intensive nature of certain client flow-based businesses.

Key performance indicators

To benchmark our achievements, we have defined a set of key performance indicators (KPI) for which we have targets to be achieved over a three to five year period across market cycles.

Growth

We target integrated bank collaboration revenues in excess of CHF 10 billion annually by 2012. Integrated bank collaboration revenues were CHF 1.2 billion for 2Q10 and CHF 2.2 billion for 6M10.

For net new assets, we target a growth rate above 6%. In 2Q10, we recorded an annualized net new asset growth rate of 4.6% and a rolling four-quarter average growth rate of 5.9%.

2Q10 total shareholder return was (21.5)%. The 2Q10 average total shareholder return of our peer group was (16.0)%.

For return on equity attributable to shareholders, we target an annual rate of return of above 18%. The annualized return on equity attributable to shareholders was 17.8% in 2Q10.

We target a Core Results cost/income ratio of 65%. Our Core Results cost/income ratio was 78.3% for 2Q10.

Capital

For the BIS tier 1 ratio, we target a minimum ratio of 12.5%. The BIS tier 1 ratio was 16.3% as of the end of 2Q10.

Efficiency and performance

For total shareholder return, we target superior share price appreciation plus dividends compared to our peer group. Our

in / end of	Target	2Q10	6M10	2009	2008	2007
Growth						
Collaboration revenues (CHF billion)	CHF 10 billion annually by 2012	1.2	2.2	5.2	5.2	5.9

¹ Wealth Management Clients covers individual clients, including affluent, high-net-worth and ultra-high-net-worth clients.

Business environment

Overall, the global economic recovery, although weak, continued in 2Q10, mainly reflecting a strong growth momentum in emerging markets, particularly in Asia. Long-term prospects for the wealth management industry remain attractive, as the economic development, especially the potential for wealth generation in emerging markets, and the ongoing generational transfer of wealth create opportunities.

In Switzerland, the economic recovery continued on a broad basis, mainly resulting from robust domestic demand and rebounding exports. The Swiss labor market further improved and consumer confidence increased, reflecting an improved assessment of the general economic environment.

Despite these positive developments, concerns about euro zone sovereign debt and public finances increased during 2Q10. A significant aid package brought temporary relief, but investor worries about unsustainable public finances remained, primarily as the restrictive austerity measures in the euro zone could adversely impact economic activity. The euro weakened substantially against the Swiss franc, which could have negative implications for the Swiss export industry.

After the slight improvement in 1Q10, the uncertainty caused investor confidence to deteriorate. Investors reduced risk exposures and were cautious with regard to investments in complex products. Market volatility in foreign exchange and equity markets, especially in the middle of the quarter, led to higher transaction volumes in 2Q10 compared to 1Q10.

In line with calls by the G-20 for increased fairness and transparency in the global tax system, implementation of OECD standards continued in 2Q10. The wealth management industry continued to evolve, reflecting increasing requirements relating to investment advice, client information and documentation and cross-border compliance. For further information, refer to I – Credit Suisse results – Core Results – Regulatory proposals and developments and – Legal proceedings – German data matter.

For further information, refer to I – Credit Suisse results – Operating environment.

Results overview

Income before taxes of CHF 874 million decreased 7% compared to 2Q09. Net revenues of CHF 2,991 million were stable. Recurring revenues, representing 77% of net revenues, were up 3%. Recurring commissions and fees increased 7%, driven by higher management, investment advisory and security account fees, primarily reflecting the 14.2% increase in average assets under management, partly offset by lower performance fees. Recurring commissions and fees reflected the ongoing cautious investor behavior and investments in less complex, lower-margin products, also within managed investment products. Net interest income was stable, reflecting the ongoing low interest rate environment in the economic cycle. Deposit margins were stable on slightly higher average volumes, and loan margins were slightly lower on slightly higher average volumes. Transaction-based revenues decreased 4%, mainly due to significantly lower integrated solutions revenues compared to a strong 2Q09, partially offset by higher foreign exchange income from client transactions and brokerage fees, reflecting increased market volatility in 2Q10. Transaction-based revenues also included lower fair value losses on the Clock Finance transaction.

We recorded provision for credit losses of CHF 3 million, with net provisions of CHF 16 million in Wealth Management Clients and net releases of CHF 13 million in Corporate & Institutional Clients.

Total operating expenses of CHF 2,114 million were 9% higher compared to 2Q09, reflecting higher general and administrative expenses, compensation and benefits and commission expenses. The 15% increase in general and administrative expenses was mainly related to ongoing investments in our client advisory services and international platforms, including IT investments, and higher marketing and sales expenses. Compensation and benefits were 5% higher, primarily reflecting increases in headcount and base salaries.

Compared to 1Q10, income before taxes decreased 2%. Net revenues increased 3%, driven by 9% higher transaction-based revenues and stable recurring revenues, reflecting 5% higher net interest income, partially offset by 3% lower recurring commissions and fees. The increase in transaction-based revenues mainly reflected higher foreign exchange income from client transactions and brokerage fees, primarily related to the higher market volatility. Transaction-based revenues also included lower fair value losses from the Clock Finance transaction. The increase in net interest income was mainly due to an increase in loan margins on slightly higher average volumes. Deposit margins were stable on slightly higher average volumes. The decrease in recurring commissions and fees reflected lower fund management fees, which had been positively impacted by a change in estimate for prior-year fee accruals in 1Q10, partly offset by higher other management, investment advisory and security account fees, primarily reflecting the higher average assets under management. Total operating expenses increased 6%, mainly due to 14% higher general and administrative expenses and 3% higher compensation and benefits.

Assets under management as of the end of 2Q10 were CHF 925.6 billion, down 2.1% compared to the end of 1Q10. Strong net new assets of CHF 13.8 billion were more than offset by negative market and foreign exchange-related movements, reflecting lower equity markets and the depreciation of the euro against the Swiss franc, partially mitigated by positive foreign exchange-related movements from the appreciation of the US dollar against the Swiss franc. Wealth Management Clients contributed net new assets of CHF 11.9 billion, benefiting especially from strong inflows in our international businesses, including strong inflows from emerging markets. Corporate & Institutional Clients contributed net new assets of CHF 1.9 billion.

Performance indicators

Pre-tax income margin (KPI)

Our target over market cycles is a pre-tax income margin above 40%. In 2Q10, the pre-tax income margin was 29.2%, down 2.5 percentage points from 2Q09 and down 1.6 percentage points from 1Q10.

Net new asset growth rate for Wealth Management Clients (KPI)

Our target over market cycles is a growth rate over 6%. In 2Q10, our annualized quarterly growth rate was 5.8%. The rolling four-quarter average growth rate was 5.4%.

Pre-tax income margin

Net new asset growth for Wealth Management Clients

Initiatives and achievements

In 2Q10, we continued our long-term strategy of organic growth and strengthened our client focus:

- We were recognized as “Best Bank Switzerland” by *Euromoney*, which noted that continuing inflows of net new assets in Switzerland and the strength in corporate and institutional clients put us ahead of the competition.
- We strengthened our ability to serve ultra-high-net-worth (UHNW) clients across all regions by completing the establishment of our dedicated coverage structure, which is instrumental to expanding our UHNW client service platform globally.
- We launched, together with Swiss Venture Club, “SVC – Ltd for Risk Capital for SMEs” to promote entrepreneurship and strengthen the Swiss economy by providing up to CHF 100 million in venture capital to Swiss small and medium-sized enterprises and start-ups.
- We further expanded our product offering for private clients in Switzerland with a new and exclusive cooperation arrangement with Zurich Financial Services in the area of life insurance, strengthening our comprehensive client advisory model.
- We launched Credit Suisse Investor Services, an integrated fund solutions and services provider, including fund administration and management and depositary bank services.

Results detail

The following provides a comparison of our 2Q10 results versus 2Q09 (YoY) and versus 1Q10 (QoQ).

Net revenues

Recurring revenues arise from net interest income, recurring commissions and fees, including performance-based fees, related to assets under management and custody assets, as well as fees for general banking products and services. Net interest income includes a term spread credit on stable deposit funding and a term spread charge on loans. Transaction-based revenues arise primarily from brokerage and product issuing fees, foreign exchange income from client transactions and other transaction-based income.

YoY: Stable at CHF 2,991 million

Net revenues were stable, reflecting higher recurring revenues offset by a decrease in transaction-based revenues. Recurring revenues were up 3%, as recurring commissions and fees increased 7%, driven by higher management, investment advisory and security account fees, primarily reflecting higher

average assets under management, partially offset by lower performance-based fees. Net interest income was stable, reflecting stable margins on slightly higher average deposit volumes and slightly lower margins on slightly higher average loan volumes. Transaction-based revenues decreased 4%, primarily from significantly lower integrated solutions revenues compared to a strong 2Q09, offset in part by higher foreign exchange income from client transactions and brokerage fees, mainly related to increased market volatility in 2Q10. Transaction-based revenues included lower fair value losses on the Clock Finance transaction.

QoQ: Up 3% from CHF 2,900 million to CHF 2,991 million

The increase reflected 9% higher transaction-based revenues and stable recurring revenues. The increase in transaction-based revenues mainly reflected the higher foreign exchange income from client transactions and brokerage fees. Also fair value losses from the Clock Finance transaction were lower. The increase in net interest income was mainly due to an increase in loan margins on slightly higher average volumes. Deposit margins were stable on slightly higher average volumes. Recurring commissions and fees decreased 3%, as 1Q10 included the positive impact from a change in estimate for prior-year fee accruals for fund management fees. This was only partially offset by higher other management, investment advisory and security account fees, reflecting higher average assets under management.

Provision for credit losses

YoY: Down 96% from CHF 72 million to CHF 3 million

New provisions of CHF 90 million and releases of CHF 87 million resulted in net new provision for credit losses of CHF 3 million, of which net new provisions of CHF 16 million were in Wealth Management Clients and net releases of CHF 13 million were in Corporate & Institutional Clients. A substantial part of the new provisions were in Wealth Management Clients. Wealth Management Clients and Corporate & Institutional Clients both reported releases. While corporate insolvencies remained at a high level in Switzerland in 2Q10, they decreased compared to 1Q10. Our corporate and institutional loan portfolio has sound quality, relatively low concentrations and is mainly collateralized by mortgages and securities. The Wealth Management Clients loan portfolio is substantially comprised of residential mortgages in Switzerland and loans collateralized by securities.

QoQ: Down 84% from CHF 19 million to CHF 3 million

Provision for credit losses decreased compared to 1Q10, as the impact from higher new provisions was more than offset by a higher level of releases.

Operating expenses

Compensation and benefits

YoY: Up 5% from CHF 1,156 million to CHF 1,214 million

The increase reflected higher headcount, base salaries and benefits and social security expenses on share award deliveries, partially offset by lower performance-related compensation accruals.

QoQ: Up 3% from CHF 1,183 million to CHF 1,214 million

The increase reflected higher salaries, mainly due to increased headcount, and the higher social security expenses, offset in part by slightly lower performance-related compensation accruals.

General and administrative expenses

YoY: Up 15% from CHF 633 million to CHF 728 million

The increase was mainly due to higher IT investments, marketing and sales expenses, professional fees and occupancy expenses. These increases were mainly related to our continued investment in the growth of our international platforms and client advisory services.

QoQ: Up 14% from CHF 638 million to CHF 728 million

The increase was mainly related to higher non-credit related provisions, marketing and sales expenses, professional fees, IT investments and occupancy expenses.

Personnel

Headcount at the end of 2Q10 was 24,900, up 300 against 1Q10. The increase during 2Q10 was mainly driven by an increase in IT professionals and in employees in our client-facing businesses, both to support our growth. The number of relationship managers in Wealth Management Clients was stable against 1Q10, reflecting slight increases in EMEA and Americas and slight decreases in Switzerland and Asia Pacific.

Wealth Management Clients

Net revenues

Recurring

YoY: Up 5% from CHF 1,805 million to CHF 1,897 million

The increase resulted from 6% higher recurring commissions and fees and 4% higher net interest income. The increase in recurring commissions and fees was mainly driven by higher management, investment advisory and security account fees, reflecting higher average assets under management, partially offset by lower performance-based fees. Net interest income increased, reflecting higher margins on stable average deposit volumes and slightly higher margins on higher average loan volumes.

QoQ: Stable at CHF 1,897 million

A 6% increase in net interest income was mostly offset by a 3% decrease in recurring commissions and fees. The increase in net interest income was mainly due to higher margins on slightly higher average loan volumes. Deposit margins and

average volumes were stable. The decrease in recurring commissions and fees reflected lower fund management fees, which had been positively impacted by a change in estimate for prior-year fee accruals in 1Q10. This was partially offset by higher other management, investment advisory and security account fees, reflecting higher average assets under management.

Transaction-based

YoY: Down 11% from CHF 696 million to CHF 619 million

The decrease was mainly related to significantly lower integrated solutions revenues compared to a strong 2Q09, partially offset by higher foreign exchange income from client transactions and brokerage fees, primarily related to the increased market volatility in 2Q10.

QoQ: Up 5% from CHF 587 million to CHF 619 million

The increase mainly reflected the higher foreign exchange income from client transactions and brokerage fees related to the market volatility in 2Q10.

Gross margin

Our gross margin was 120 basis points in 2Q10, 15 basis points lower than in 2Q09. The recurring margin decreased six basis points, as the impact from the 12.8% increase in average assets under management exceeded the 5% increase in recurring revenues. The transaction-based margin decreased nine basis points, reflecting the 11% decrease in transaction-based revenues and the increase in average assets under management.

Compared to 1Q10, the gross margin was stable as the 2.9% increase in average assets under management was in line with the 2% increase in net revenues.

Corporate & Institutional Clients**Net revenues****Net interest income**

YoY: Down 11% from CHF 341 million to CHF 302 million

The decrease was mainly due to substantially lower margins on stable average loan and higher average deposit volumes.

QoQ: Up 3% from CHF 293 million to CHF 302 million

The increase mainly reflected slightly higher margins on slightly higher average loan volumes. Net interest income from deposits increased slightly, reflecting slightly lower margins on higher average deposit volumes.

Non-interest income

YoY: Up 59% from CHF 109 million to CHF 173 million

The increase included lower fair value losses of CHF 1 million on the Clock Finance transaction compared to losses of CHF 32 million in 2Q09. Excluding the fair value losses on the Clock Finance transaction, non-interest income increased 23%, mainly driven by higher management fees, other recurring commissions and fees, foreign exchange income from client transactions and product issuing fees.

QoQ: Up 21% from CHF 143 million to CHF 173 million

The increase included lower fair value losses on the Clock Finance transaction compared to CHF 12 million in 1Q10. Excluding the fair value losses on the Clock Finance transaction, non-interest income increased 12%, reflecting higher integrated solutions revenues, foreign exchange income from client transactions, product issuing fees and other recurring commissions and fees.

Return on business volume

Return on business volume measures revenues over average business volume, which is comprised of client assets and net loans.

Return on business volume of 81 basis points was six basis points below 2Q09, as net revenues increased 6%, while the average business volume increased 14.0%, mainly resulting from higher assets under management. Compared to 1Q10, the return on business volume increased four basis points, mainly reflecting a 9% increase in net revenues.

Excluding the fair value gains/(losses) on the Clock Finance transaction, return on business volume was 81 basis points in 2Q10, 79 basis points in 1Q10 and 94 basis points in 2Q09.

Investment Banking

In 2Q10, we reported income before taxes of CHF 784 million, net revenues of CHF 4,099 million and a pre-tax return on average utilized economic capital of 15.8%. Net revenues were impacted by volatile market conditions arising from sovereign debt concerns and regulatory uncertainty resulting in client risk aversion, reduced client activity across most businesses and lower fixed income sales and trading results. We had solid equity sales and trading results and resilient underwriting and advisory revenues, despite the challenging market conditions.

¹ As part of the ongoing review to improve risk management approaches and methodologies, the average one-day, 99% VaR measure has been revised. For further information on VaR and changes in VaR methodology, refer to IV – Treasury and Risk management – Risk management – Market risk. ² Includes additional risk-weighted asset equivalents attributable to the segment that are deducted from Group tier 1 capital.

Business environment

The business environment in 2Q10 was challenging. Continued economic difficulties in Greece, Ireland, Portugal and Spain led to fears of contagion across the rest of Europe and questions about the strength of European banks, which weakened the euro. These concerns persisted even after the EU announced a significant bailout plan designed to assist the struggling euro zone countries. Global credit markets tightened during the quarter and unemployment continued to be high but other data points, including an increase in global manufacturing activity and a slight increase in consumer spending, indicated a continued, although weak, economic recovery.

Given the slow pace of the recovery, the Fed maintained its target for short-term interest rates near zero and continued to anticipate that economic conditions would warrant exceptionally low interest rates for an extended period. Similarly, the ECB kept short term-interest rates unchanged at a record low

of 1% and the BoE signaled that it would not tighten monetary policy for at least a year.

During the quarter, the global regulatory landscape continued to evolve. Proposals to increase capital and liquidity requirements for financial institutions under the Basel framework gained momentum around the world. While the global regulations proposed are extensive and far-reaching, the final outcome and timing is uncertain, and it is widely anticipated that implementation would be gradual, potentially spanning several years. In the US, the Reform Act is expected to substantially overhaul the US financial regulatory system, addressing systemic risks to the nation's financial stability, empower the Fed to supervise the largest and most complex financial companies and provide the government with the authority to seize and liquidate failing financial companies. The Reform Act includes extensive measures to regulate the derivatives market, including requirements for standardized derivatives to trade on exchanges and be routed through clearinghouses and non-standardized derivatives to be reported to

central repositories. The Reform Act also imposes restrictions on proprietary trading and limits investments in hedge and private equity funds. For further information, refer to I – Credit Suisse results – Core Results – Regulatory proposals and developments.

Equity markets improved throughout April, but steadily declined during the rest of the quarter after a significant downgrade of the sovereign debt ratings for Greece and Portugal. Market volatility as indicated by the VIX more than doubled in May from 1Q10 levels, and despite declining in June, remained above 1Q10 levels. Credit spreads widened significantly. The US dollar strengthened against the British pound, the Swiss franc and the euro, which weakened to a fourteen-month low against the US dollar and weakened against the Japanese yen and the Chinese renminbi compared to 1Q10.

Equity trading volumes increased in the US and Europe compared to 1Q10. Fixed income trading volumes in the US increased slightly with an increase in government and corporate trading volumes and a decline in mortgage-backed and agency trading volumes. Fixed income trading volumes in Europe were down from 1Q10.

Global debt underwriting volumes decreased in 2Q10, primarily due to lower investment grade issuance. Global equity underwriting volumes declined from 1Q10 levels, primarily due to a high number of withdrawn or postponed IPOs. The US dollar volume of announced M&A declined while completed M&A increased in the quarter.

For further information, refer to I – Credit Suisse results – Operating environment.

Results overview

In 2Q10, income before taxes was CHF 784 million, compared to CHF 1,655 million in 2Q09 and CHF 1,794 million in 1Q10. Net revenues decreased to CHF 4,099 million from CHF 6,011 million in 2Q09 and CHF 5,216 million in 1Q10. Pre-tax return on average utilized economic capital was 15.8% in 2Q10, compared to 32.2% in 2Q09 and 37.5% in 1Q10.

Most of our businesses were adversely impacted by macro-economic issues triggered by the sovereign debt concerns in Europe and ongoing regulatory uncertainty, leading to client risk aversion, reduced client activity and market volatility. Revenues in 2Q10 declined due to weaker fixed income sales and trading revenues, but this decline was partially offset by solid equity sales and trading results, despite difficult market conditions, and resilient underwriting and advisory revenues, as market share gains largely mitigated the impact of an industry-wide decline in debt and equity issuance.

In 2Q10, fixed income sales and trading results were driven by solid revenues in our US RMBS trading, global rates and foreign exchange businesses despite the challenging market environment. Revenues in our credit businesses were adversely impacted by the difficult market conditions, including widening credit spreads. Revenues in our emerging markets trading and corporate lending businesses were adversely impacted by client risk aversion and widening credit spreads.

Equity sales and trading revenues were solid despite difficult market conditions and reduced client activity, reflecting sustained market share gains across most products. Revenues declined compared to a strong 2Q09, but increased slightly compared to 1Q10, and reflected strong revenues in cash equities and prime services and solid revenues in our derivatives business.

Our results also reflected fair value losses on Credit Suisse debt of CHF 62 million compared to net fair value losses of CHF 269 million in 2Q09 and fair value losses of CHF 59 million in 1Q10.

Compensation and benefits of CHF 2,014 million in 2Q10 were lower than 2Q09, primarily due to significantly lower performance-related compensation reflecting lower risk-adjusted profitability. Total other operating expenses decreased 6% from 2Q09, reflecting litigation charges of CHF 383 million in 2Q09. Excluding these litigation charges, total other operating expenses increased 30%, primarily reflecting higher IT investment costs and professional fees driven by the pending strategic acquisition of Fortis Bank Nederland's prime fund solutions business and asset sales in businesses we are exiting. Compensation and benefits were lower than 1Q10, mainly due to lower performance-related compensation, reflecting lower risk-adjusted profitability. Total other operating expenses increased 10% from 1Q10, primarily reflecting the foreign exchange translation impact.

Risk-weighted assets of USD 142 billion decreased slightly compared to 1Q10. Average one-day, 99% risk management VaR of CHF 117 million increased 13% compared to 1Q10.

Results in 2Q10 were impacted by the strengthening of the average rate of the US dollar against the Swiss franc compared to 1Q10, which favorably affected revenues and adversely impacted expenses. In US dollars, net revenues and total operating expenses were 24% and 9% lower, respectively, compared to 1Q10. In 1Q10, revenues were adversely affected and expenses were favorably affected by the foreign exchange translation of the US dollar against the Swiss franc. For more information on foreign currency translation rates, refer to VI – Investor information.

During the quarter, we continued to execute our client-focused, capital-efficient strategy with continued focus on a disciplined alignment of capital and investment in high-return-

ing client businesses. Our strategic investments during the quarter included entering into an agreement to acquire the prime fund solutions business from Fortis Bank Nederland, a global leader in hedge fund administration services. This acquisition is expected to close by year end and will further strengthen our prime services franchise by enabling us to offer a more complete product suite to our hedge fund clients. We maintained market share momentum across most products and regions and made significant progress in expanding our distribution capabilities in our securities business. In particular, we completed most of our planned sales hires in our fixed income flow businesses. In addition, we extended our strong position in equities, strengthened our advisory and underwriting franchises and continued to focus on growing our leading emerging markets platform.

Performance indicators

Pre-tax income margin

Our target over market cycles is a pre-tax income margin of 25% or greater. The pre-tax income margin was 19.1% in 2Q10, compared to 27.5% in 2Q09 and 34.4% in 1Q10.

Value-at-Risk

The average one-day, 99% risk management VaR was CHF 117 million in 2Q10, compared to CHF 148 million in 2Q09 and CHF 104 million in 1Q10. For further information on VaR and changes in VaR methodology, refer to IV – Treasury and Risk management – Risk management – Market risk.

Pre-tax income margin

Pre-tax return on average utilized economic capital

The pre-tax return on average utilized economic capital was 15.8% in 2Q10, compared to 32.2% in 2Q09 and 37.5% in 1Q10.

Risk-weighted assets

Risk-weighted assets decreased slightly to USD 142 billion compared to 1Q10 driven by a decrease in our risk-weighted assets in exit businesses, which were USD 15 billion as of the end of 2Q10. We will continue to reallocate capital from our exit businesses to support growth in client-focused businesses.

Significant transactions and achievements

We were active in executing or advising on a number of significant closed and pending transactions, reflecting the breadth and diversity of our investment banking franchise:

- **Debt capital markets:** We arranged key financings for a diverse set of clients, including CNH Global N.V. (Dutch agricultural and construction equipment manufacturer), Freescale Semiconductor Inc. (US semiconductor manufacturer), Reynolds Group Holdings Ltd (New Zealand consumer products manufacturer), Spectrum Brands, Inc. (US consumer products company) and Ziggo Bond Company BV (Dutch cable television operator).
- **Equity capital markets:** We executed IPOs for Chr. Hansen Holding A/S (Danish food ingredients company) and Sunway Real Estate Investment Trust (Malaysian real estate investment trust), a rights issue and follow-on offering for The Governor and Company of The Bank of Ireland (Irish bank) and follow-on offerings for PPL Corporation (US energy and utility holding company) and The PMI Group, Inc. (US residential mortgage insurance company).
- **Mergers and acquisitions:** We advised on a number of key transactions, including the sale by AXA Group (French insurance company) of part of its UK life and savings operations to Resolution Ltd (UK financial services restructuring firm), the sale by ConocoPhillips (US energy company) of its interest in Syncrude Canada Ltd (Canadian oil company) to Sinopec International Petroleum Exploration and Production Company (Chinese oil and gas producer), the acquisition by PPL Corporation (US energy and utility holding company) of E.ON U.S. LLC (US diversified energy services company), the acquisition by Qatar Holdings LLC (Qatar government investment holding company) of Harrods Ltd (UK department store operator) and the acquisition by Silver Lake (global private investment firm)

and Warburg Pincus (global private equity firm) of Interactive Data Corporation (US financial information provider).

Industry awards

- Awarded “Best Global Bank” and “Best Emerging Markets Investment Bank” by *Euromoney*. We also received fourteen regional and country awards in EMEA, Asia-Pacific, Latin America and Switzerland, underscoring the depth and breadth of our global footprint. Strengths highlighted included our strong capital position, credit rating and notable performances in Investment Banking and Private Banking.
- Ranked number two in *The Wall Street Journal*’s “Best on the Street” analyst survey, moving up from tenth place last year, demonstrating the continuing momentum of our equity research franchise.
- Ranked second in *Forbes*’ top-ranked stock analysts survey. The awards are based on the number of individual Blue Chip awards won, as tabulated by Zacks Investment Research.
- Awarded “Deals of the Year” by *The Banker* in financial institutions capital raising in Africa (Standard Bank), equities and structured finance in America (Santander Brazil and American General), equities in Asia-Pacific (China Pacific Insurance), corporate bonds in Europe (Roche Holding) and SSA bonds in the Middle East (government of Qatar).
- Ranked number one for the second consecutive year in the 2010 *Global Custodian*’s Prime Brokerage survey, earning more “Best in Class” awards than any bank. Among the clients surveyed for the 17th annual survey, Credit Suisse emerged as a leader in scores awarded for reputation. We also ranked number one in the global league tables, as well as number one for funds with USD 5 billion to USD 10 billion of assets under management and funds with over USD 10 billion of assets under management.
- Awarded “Best Foreign Investment Bank for 2009” by Korea’s *Money Today*.
- Awarded “Best Fund-Linked House” in *FinanceAsia*’s 2009 Structured Products Awards. Awarded “Best Foreign Investment Bank” in Indonesia, Taiwan and Vietnam in *FinanceAsia*’s Country Awards for Achievement 2010.
- Awarded “Best Overall Provider for Structured Equity Products” in *Asiamoney*’s 2010 Structured Products Poll.
- Awarded “Best FX Options” in *Profit & Loss*’ digital FX awards for our Merlin FX options platform. This is the third consecutive year that Merlin has been recognized for outstanding achievement by *Profit & Loss*, winning “Best FX Options” platform in 2008 and the “P&L Innovation” award in 2009.

Market share momentum

- Our overall prime brokerage market share ranking in Europe improved from number two to number one in *Euro-Hedge*’s Annual Prime Brokerage Survey. According to the survey, Credit Suisse Prime Services has a 15% market share in the region based on assets and was one of two firms to show asset growth over the past year. We were also ranked number one in macro, fixed income and futures strategies based on assets.
- We made significant progress in *Euromoney*’s 2010 FX Survey. Our overall market share ranking improved to eighth, and we registered the largest market share increase among the top ten banks. We were also named the “Most Improved Market Share by region” in North America, ranked sixth in Western Europe and in the top three in “Most Improved Market Share by institution” for banks.
- Ranked fourth in *Risk* magazine’s 2010 Institutional Investors Ranking of derivative providers, moving up six positions from last year. We were the most improved dealer and increased our rankings in six of the nine “overall” fixed income categories. In Swiss francs, we ranked number one in interest rate swaps, interest rate options and forward rate agreements. We also ranked first in all US dollar/Swiss franc currency categories.
- Credit Suisse ranked number one in terms of market share in global cash products in a recent survey conducted by a leading market share analysis provider.
- We were recognized for our leading Asian equities client trading and execution services by US Institutions in a recent survey conducted by *Greenwich Associates*. The survey ranked Credit Suisse number one in “Overall Trading Penetration”, “Sales Trading Capability”, “Electronic Trading Penetration” and “Program Trading Penetration” for Asia (ex-Japan). We were also ranked number two for “Overall Trading Penetration” and “Sales Trading Capability” and number one for “Electronic Trading Penetration” and “Program Trading Penetration” in Japan.
- We advanced to the top five globally and number two in the Americas for announced M&A by *Thomson* for 6M10.
- We advanced to the top three for global high yield underwriting and top five globally for investment grade underwriting by *Thomson* for 6M10.
- We advanced to the top five in global investment banking revenues by *Dealogic* for 6M10.

Results detail

The following provides a comparison of our 2Q10 results versus 2Q09 (YoY) and versus 1Q10 (QoQ).

Net revenues

Debt underwriting

YoY: Up 95% from CHF 236 million to CHF 461 million

The increase was primarily due to stronger results in leveraged finance revenues, which reflected an increase in industry-wide high yield issuance volumes and an increase in high yield market share. These results were partially offset by lower revenues from investment grade debt issuance, driven by a significant decline in industry-wide issuance volumes.

QoQ: Up 2% from CHF 452 million to CHF 461 million

The increase reflected higher leveraged finance revenues despite lower industry-wide high yield issuance volumes, reflecting an increase in high yield market share and higher revenues from asset-backed securities (ABS). These results were mostly offset by lower revenues from investment grade debt issuance driven by lower industry-wide issuance volumes. In US dollar terms, revenues declined slightly.

Equity underwriting

YoY: Down 29% from CHF 301 million to CHF 215 million

The decrease was in line with significantly lower levels of industry-wide equity issuance volumes, particularly follow-on offerings, partially offset by an increase in our IPO market share. IPO issuance was at extremely low levels in both periods.

QoQ: Down 2% from CHF 219 million to CHF 215 million

The decrease was driven by slightly lower levels of industry-wide equity issuance volumes across IPOs, follow-on offerings and convertibles.

Advisory and other fees

YoY: Up 88% from CHF 166 million to CHF 312 million

The increase was due to higher M&A fees driven by a significant increase in industry-wide completed M&A activity and completed M&A market share.

QoQ: Up 44% from CHF 216 million to CHF 312 million

The increase reflected higher M&A fees driven by an increase in industry-wide completed M&A activity and completed M&A market share, partially offset by a decline in other advisory fees.

Fixed income sales and trading

YoY: Down 54% from CHF 3,140 million to CHF 1,438 million

The decrease reflected significantly lower revenues in our credit businesses, including leveraged finance and high grade trading, which were adversely impacted by market conditions

triggered by sovereign debt concerns, regulatory uncertainty and widening credit spreads. In addition, we had significantly lower revenues in global rates, especially in our European rates business, compared to a strong 2Q09. Revenues in our emerging markets trading and corporate lending business were also lower compared to 2Q09 as a result of client risk aversion and widening credit spreads during the quarter. Revenues in our global foreign exchange business, although lower than 2Q09, were solid, driven by strong growth in electronic volumes. These results were partially offset by significantly lower losses of CHF 0.2 billion in our exit businesses, compared to losses of CHF 0.6 billion in 2Q09, and continued strong results in our US RMBS trading business as improved non-agency revenues offset a decline in agency revenues. Our results included fair value losses on Credit Suisse debt of CHF 56 million compared to net fair value losses of CHF 242 million in 2Q09.

QoQ: Down 46% from CHF 2,662 million to CHF 1,438 million

The decrease reflected lower revenues across most businesses, including leveraged finance trading, high grade trading, US RMBS trading, corporate lending and emerging markets trading businesses. Revenues in our non-agency RMBS business, although strong, were lower compared to 1Q10, which benefited from strong market activity and client demand. We also had solid results in our global rates business, although slightly lower than 1Q10. We had higher losses in our exit businesses, primarily driven by net valuation reductions in commercial mortgage-backed securities (CMBS) compared to minimal net valuation reductions in 1Q10. These results were partially offset by revenues in our commodities business compared to small losses in 1Q10, smaller losses in our fixed income trading arbitrage business and higher revenues in our foreign exchange business.

Equity sales and trading

YoY: Down 22% from CHF 2,209 million to CHF 1,723 million

The decrease was driven by lower revenues in our cash equities business, which although solid, were weaker compared to a strong 2Q09, and lower revenues in equity arbitrage trading. We also had lower revenues in our convertibles business. Revenues in our derivatives business, while solid across all products and regions, were lower compared to 2Q09. We had strong revenues in our prime services business reflecting higher client balances and market share despite continued low levels of hedge fund leverage and activity, and higher revenues from fund-linked products. Our results included fair value losses on Credit Suisse debt of CHF 6 million compared to net fair value losses of CHF 27 million on Credit Suisse debt in 2Q09.

QoQ: Up 2% from CHF 1,694 million to CHF 1,723 million

The increase was driven by the strong revenues in our prime services business. We also had higher revenues from fund-linked products and resilient revenues in our cash equities business, including higher revenues from electronic trading. These results were offset by lower revenues in our equity derivatives business compared to a strong 1Q10, as well as lower revenues in convertibles. In US dollar terms, revenues declined slightly.

Provision for credit losses**YoY: Down 93% from CHF 238 million to CHF 17 million**

The decrease was due to provisions in 2Q09 against loans to a single borrower in our emerging markets business, lower provisions in 2Q10 against a guarantee provided in a prior year to a third-party bank compared to 2Q09 and releases and recoveries in 2Q10.

QoQ: From CHF (69) million to CHF 17 million

The increase was due to provisions in 2Q10 against a guarantee provided in a prior year to a third-party bank compared to a release in 1Q10, as well as slightly lower releases and recoveries in 2Q10.

Operating expenses**Compensation and benefits****YoY: Down 27% from CHF 2,746 million to CHF 2,014 million**

The decrease was due to significantly lower performance-related compensation, reflecting lower risk-adjusted profitability, partially offset by an increase in salary expense reflecting higher base salaries and increased headcount and higher deferred compensation from prior-year awards.

QoQ: Down 13% from CHF 2,324 million to CHF 2,014 million

The decrease was mainly due to lower performance-related compensation, reflecting lower risk-adjusted profitability, partly offset by higher social security taxes on share award deliveries and higher salary expense reflecting increased headcount.

General and administrative expenses**YoY: Down 14% from CHF 1,079 million to CHF 933 million**

The decrease reflected litigation charges of CHF 383 million in 2Q09, of which CHF 344 million related to the settlement of litigation with Huntsman. Excluding these litigation charges, expenses increased 34%, primarily reflecting higher IT investment costs, professional fees relating to the pending acquisition of Fortis Bank's prime fund solutions business and to asset sales in businesses we are exiting, and expenses relating to travel and entertainment, recruitment and advertising, driven by an increase in client-related business activity.

QoQ: Up 8% from CHF 862 million to CHF 933 million

The increase reflected the foreign exchange translation impact, the higher IT investment costs, the higher professional fees and recruitment expenses, mostly offset by a decrease in litigation and expense provisions. 1Q10 included non-income tax refunds.

Personnel

Headcount at the end of 2Q10 was 20,600, up 600 from 1Q10 driven by an increase in IT professionals, the expansion of our sales force in fixed income, strategic hires across geographies in our underwriting and advisory businesses and additional headcount in prime services and cash equities.

Asset Management

In 2Q10, we recorded income before taxes of CHF 22 million. We had investment-related gains of CHF 46 million and gains of CHF 36 million from the sale of the remaining securities purchased from our money market funds. We recorded net new assets of CHF 1.3 billion despite difficult market conditions, maintaining a positive trend in asset inflows over the past four quarters.

Business environment

The operating environment was mixed in 2Q10, as the European sovereign debt crisis and the related adverse impact on the euro and regulatory uncertainty, overshadowed the signs of a continued, though weak, global economic recovery. Overall, capital markets were volatile, with equity markets falling globally. US fixed income was among the best performing asset classes as investors sought the safety of the US dollar and reduced risk. Hedge funds posted a negative absolute performance, as the Dow Jones Credit Suisse Hedge Fund Index fell 2.4%, but outperformed equity markets.

Bond funds continued to attract the majority of net new assets, while flows into balanced and equity products were mixed. Fundraising for illiquid products remained challenging during the quarter.

For further information, refer to I – Credit Suisse results – Operating environment and Core Results – Regulatory proposals and developments.

Results overview

In 2Q10, income before taxes was CHF 22 million, compared to income before taxes of CHF 55 million in 2Q09. Net revenues of CHF 502 million were up CHF 68 million, including investment-related gains compared to losses in 2Q09. Net revenues before securities purchased from our money market funds and investment-related gains/(losses) were CHF 420 million, stable compared to 2Q09. Fee revenues were stable compared to 2Q09, as higher asset management, placement, transaction and other fees were offset by lower performance fees and carried interest. Asset management fees of CHF 360 million were up 6%, primarily reflecting higher average assets under management in alternative investments and multi-asset class solutions. Average assets under management increased 6.5% compared to 2Q09. Placement, transaction and other fees were up 34%. Performance fees and carried interest were down significantly, primarily due to lower semi-annual performance fees from Hedging-Griffo as a result of challenging market conditions. Equity participations revenues were down, mainly due to gains of CHF 21 million in 2Q09 as a

result of the closing of the first part of the Aberdeen transaction. Investment-related gains were CHF 46 million, compared to losses of CHF 28 million in 2Q09. Other revenues increased CHF 10 million, reflecting lower allocated funding costs and gains from the sale of non-core businesses in Australia, partially offset by slightly lower gains from securities purchased from our money market funds.

Total operating expenses of CHF 480 million increased 27% compared to 2Q09, due to higher compensation and benefits, general and administrative expenses and commission expenses. The increase in compensation and benefits was mainly due to higher deferred compensation from prior-year awards and increased base salaries, partially offset by lower performance-based compensation. The increase in general and administrative expenses was mainly due to higher professional fees and other costs relating to strategic and restructuring projects.

Compared to 1Q10, income before taxes was down CHF 144 million. Net revenues were down CHF 129 million, primarily reflecting lower investment-related gains and significantly lower gains from securities purchased from our money market funds, which were CHF 107 million in 1Q10. Net revenues before securities purchased from our money market funds and investment-related gains/(losses) increased 6%, mainly from higher revenues from equity participations, reflecting the 1Q10 losses from the reduction in our ownership interest in Aberdeen due to an issuance of shares by Aberdeen. Average assets under management increased 3.4% compared to 1Q10. Total operating expenses increased 3%, mainly due to higher general and administrative expenses and slightly higher compensation and benefits.

Assets under management were CHF 423.0 billion, down 2.6% compared to 1Q10, primarily due to negative market performance and adverse foreign exchange-related movements. Net new assets of CHF 1.3 billion included net inflows of CHF 1.1 billion in alternative investments, including inflows in private equity, exchange-traded funds (ETFs) and hedge funds, and inflows of CHF 0.2 billion in traditional investments, mainly in our Swiss advisory business. Compared to 2Q09, assets under management were up 3.0%, primarily reflecting positive market performance and net new assets, partially offset by the transfer of the managed lending business to Investment Banking, the sale of two joint ventures in 4Q09 and adverse foreign exchange-related movements.

As of the end of 2Q10, we had fully liquidated our balance sheet exposure to securities purchased from our money market funds.

Since the end of 2Q09, our principal investments balance included new investments in private equity and hedge funds and unrealized gains.

Performance indicators

Pre-tax income margin (KPI)

Our target over market cycles is a pre-tax income margin above 40%. The pre-tax income margin was 4.4% in 2Q10, compared to 12.7% in 2Q09 and 26.3% in 1Q10.

Net new asset growth rate

In 2Q10, the rolling four-quarter average growth rate was 5.0%, compared to negative 8.4% in 2Q09 and 3.7% in 1Q10. The annualized quarterly growth rate was 1.2% in 2Q10, compared to negative 4.0% in 2Q09 and 10.8% in 1Q10.

Fee-based margin

The fee-based margin, which is asset management fees, placement, transaction and other fees and performance fees and carried interest divided by average assets under management, was 37 basis points in 2Q10, compared to 40 basis points in 2Q09 and 39 basis points in 1Q10.

Initiatives and achievements

- We have driven growth in our business through the expansion of our ETF platform with the launch of our S&P 500 ETF on the SIX Swiss Exchange, Xetra in Germany and the Borsa Italiana in Italy, rebranding certain products such as Credit Suisse/Tremont to the Dow Jones Credit Suisse

Pre-tax income margin

n/m: not meaningful

Hedge Fund Indexes, launching new product lines and gathering net new assets. Also, we have rebranded our Xmtch range of products to Credit Suisse ETF as part of our plans to become a leading European ETF provider.

- We continued to drive efficiency across all platforms by restructuring unprofitable businesses to focus on core businesses in alternative investments, multi-asset class solutions and our Swiss platform. We took action to spin-off our real estate private equity fund and our credit hedge fund Candlewood Investments (in which we reduced our principal investment), and sold our Australian property and credit funds.
- We had continued wins with major institutional mandates in private equity fund of funds and insurance-linked hedge funds platform.

Results detail

The following provides a comparison of our 2Q10 results versus 2Q09 (YoY) and versus 1Q10 (QoQ).

Net revenues

Asset management fees

YoY: Up 6% from CHF 341 million to CHF 360 million

The increase mainly reflected higher fees from alternative investments, which increased primarily due to higher fees from index strategies and our business in Brazil from higher average assets under management, partially offset by a slight decrease in private equity fees. Traditional investments increased slightly, as higher fees from multi-asset class solutions and fixed income & equities were mostly offset by lower fees from Swiss advisory.

QoQ: Stable at CHF 360 million

Asset management fees were stable, as higher fees from alternative investments were offset by lower fees from diversified investments and traditional investments. Higher alternative investments fees were mainly from our business in Brazil, hedge funds and ETFs, reflecting higher average assets under management, partially offset by slightly lower fees from private equity and credit strategies. Diversified investments decreased due to lower fees from fund administration services. Traditional investments were down, reflecting a decrease in multi-asset class solutions.

Placement, transaction and other fees

YoY: Up 34% from CHF 32 million to CHF 43 million

The increase was mainly due to higher fees in alternative investments, reflecting higher transaction fees, primarily in real estate, and placement fees from private equity.

QoQ: Up 16% from CHF 37 million to CHF 43 million

The increase was mainly due to higher fees in alternative investments from transaction fees in real estate and from Credit Suisse (Brazil) and placement fees from private equity.

Performance fees and carried interest

YoY: Down 92% from CHF 37 million to CHF 3 million

The decrease was mainly due to lower semi-annual performance fees in alternative investments from Hedging-Griffo and a claw-back of performance fees in diversified investments relating to management of the Partner Asset Facility (PAF), reflecting difficult market conditions.

QoQ: Down 81% from CHF 16 million to CHF 3 million

The decrease was mainly due to lower fees from diversified strategies, relating to management of the PAF, and alternative investments, primarily hedge funds and credit strategies, reflecting the challenging market conditions, partially offset by slightly higher fees from private equity.

Equity participations

YoY: Down 34% from CHF 35 million to CHF 23 million

The decrease was mainly due to lower revenues from diversified investments, reflecting the gains of CHF 21 million in 2Q09 from the closing of the first part of the Aberdeen transaction, partially offset by income in 2Q10 from our investment in Aberdeen.

QoQ: Up from CHF (9) million to CHF 23 million

The increase was mainly due to higher revenues from diversified investments, reflecting the loss recorded in 1Q10 for the reduction of our ownership interest in Aberdeen due to an issuance of shares by Aberdeen, and slightly higher income in 2Q10 from our equity investments in alternative investments and diversified investments, including Aberdeen.

Investment-related gains/(losses)

YoY: Up from CHF (28) million to CHF 46 million

In 2Q10, we had unrealized gains in private equity investments, mainly in the energy and industrial sectors, and in credit-related investments, partially offset by unrealized losses in private equity, mainly in public investments in the technology sector. In 2Q09, we had unrealized losses in private equity investments, mainly in the real estate, utilities and financial services sectors, partially offset by unrealized gains in credit-related investments and private equity investments in the commodities sector.

QoQ: Down 63% from CHF 126 million to CHF 46 million

In 2Q10, we had unrealized gains in private equity investments, mainly in the energy and industrial sectors, and in credit-related investments, partially offset by unrealized losses in private equity, mainly in public investments in the technology

sector. In 1Q10, we had unrealized gains in private equity investments, mainly in the energy, technology and commodity sectors, and in credit-related investments.

Operating expenses

Compensation and benefits

YoY: Up 30% from CHF 223 million to CHF 289 million

The increase was mainly due to higher deferred compensation from prior-year awards and increased base salaries, partially offset by lower performance-based compensation.

QoQ: Up 2% from CHF 282 million to CHF 289 million

The increase was mainly due to higher deferred compensation, partially offset by a slight decrease in performance-related compensation.

General and administrative expenses

YoY: Up 17% from CHF 127 million to CHF 148 million

The increase was mainly due to higher professional fees and other costs relating to strategic and restructuring projects, including the transfer of the Luxembourg fund administration to Private Banking, partially offset by lower litigation provisions.

QoQ: Up 7% from CHF 138 million to CHF 148 million

The increase was mainly due to the higher professional fees, as most other expense categories were stable or lower.

Personnel

In 2Q10, headcount was 2,800, down 100 from 1Q10 and down 400 from 2Q09, mainly reflecting the transfer of the Luxembourg fund administration to Private Banking in 1Q10.

Assets under management

Assets under management

Assets under management comprise assets which are placed with us for investment purposes and include discretionary and advisory counterparty assets.

Discretionary assets are assets for which the customer fully transfers the discretionary power to a Credit Suisse entity with a management mandate. Discretionary assets are reported in the segment in which the advice is provided as well as in the segment in which the investment decisions take

place. Assets managed by Asset Management for Private Banking clients are reported in both segments and eliminated at Group level.

Advisory assets include assets placed with us where the client is provided access to investment advice but retains discretion over investment decisions.

As of the end of 2Q10, assets under management were CHF 1,242.6 billion, down CHF 28.3 billion, or 2.2%, compared to the end of 1Q10. The decrease reflected negative market performance and adverse foreign exchange-related

Private Banking	6.0	6.0	4.2
Asset Management	5.0	3.7	(8.4)
Assets managed by Asset Management for Private Banking clients	2.8	2.7	(8.8)
Growth in net new assets	5.9	5.5	0.5

¹ Calculated based on continuing operations.

movements, partially offset by net new assets. Compared to the end of 2Q09, assets under management from continuing operations were up CHF 67.4 billion, or 5.7%. The increase reflected favorable market performance and net new assets in both Private Banking and Asset Management, partially offset by adverse foreign exchange-related movements and other effects, primarily in Asset Management, reflecting the transfer of the managed lending business to Investment Banking and the sale of two joint ventures in 4Q09.

In Private Banking, assets under management were CHF 925.6 billion, down CHF 20.1 billion, or 2.1%, compared to the end of 1Q10, and up CHF 63.4 billion, or 7.4%, compared to the end of 2Q09. In Asset Management, assets under management were CHF 423.0 billion, down CHF 11.2 billion, or 2.6%, compared to the end of 1Q10, and up CHF 12.3 billion, or 3.0%, compared to the end of 2Q09.

For further information, refer to II – Results by division – Private Banking and – Asset Management and Note 35 – Assets under management in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2009.

Net new assets

Net new assets include individual cash payments, security deliveries and cash flows resulting from loan increases or repayments. Interest and dividend income credited to clients, commissions, interest and fees charged for banking services are not included as they do not reflect success in acquiring assets under management. Furthermore, changes due to currency and market movements as well as asset inflows and outflows due to the acquisition or divestiture of businesses are not part of net new assets.

Private Banking recorded net new assets of CHF 13.8 billion in 2Q10, including CHF 11.9 billion in Wealth Management Clients, with inflows in all regions, mainly EMEA and Asia Pacific. Asset Management recorded net new assets of CHF 1.3 billion, mainly in alternative investments.

Client assets

Client assets is a broader measure than assets under management as it includes transactional and custody accounts (assets held solely for transaction-related or safekeeping/custody purposes) and assets of corporate clients and public institutions used primarily for cash management or transaction-related purposes.

IV

Treasury and Risk management

52 Treasury management

61 Risk management

Treasury management

We continued to conservatively manage our liquidity and funding position, and our capital position remained strong with a BIS tier 1 ratio of 16.3% as of the end of 2Q10.

Liquidity and funding management

Securities for funding and capital purposes are issued primarily by the Bank, our principal operating subsidiary and a US registrant. The Bank lends funds to its operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to support business initiatives. For further information, refer to III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2009.

Liquidity risk management

Our internal liquidity risk management framework has been subject to review and monitoring by regulators and rating agencies for many years. Our liquidity and funding policy is designed to ensure that funding is available to meet all obligations in times of stress, whether caused by market events or issues specific to Credit Suisse. We achieve this due to a conservative asset/liability management strategy aimed at maintaining a funding structure with long-term wholesale and stable deposit funding and cash well in excess of illiquid assets. To address short-term liquidity stress, we maintain a buffer of cash and highly liquid securities that covers unexpected needs of short-term liquidity. Our liquidity risk parameters reflect various liquidity stress assumptions, which we believe are conservative. We manage our liquidity profile at a sufficient level such that, in the event that we are unable to access unsecured funding, we will have sufficient liquidity to sustain operations for an extended period of time well in excess of our minimum target.

The impact of a one, two or three notch downgrade in the Bank's long-term debt ratings would result in additional collateral requirements or assumed termination payments under certain derivative instruments of CHF 2.8 billion, CHF 5.0 bil-

lion and CHF 5.5 billion, respectively, and would not be material to our liquidity and funding planning. As of the end of 2Q10, we were compliant with the requirements related to maintaining a specific credit rating under these derivative instruments.

The second quarter was characterized by increased concerns about the sustainability of public finances and the sovereign debt risk of a number of euro zone countries. This resulted in increased systemic stress in the financial markets which had an adverse impact on the capital markets and credit spreads. Notwithstanding the difficult capital markets, we were able to raise long-term funding in 2Q10 and maintained our funding target.

Funding sources and uses

We primarily fund our balance sheet through long-term debt, shareholders' equity and core customer deposits. A substantial portion of our balance sheet is match funded and requires no unsecured funding. Match funded balance sheet items consist of assets and liabilities with close to equal liquidity durations and value so that the liquidity and funding generated or required by the positions are substantially equivalent. Cash and due from banks is highly liquid. A significant part of our assets, principally unencumbered trading assets that support the securities business, is comprised of securities inventories and collateralized receivables, which fluctuate and are generally liquid. These liquid assets are available to settle short-term liabilities. These assets include our buffer of CHF 138 billion of cash, securities accepted under central bank facilities and other highly liquid unencumbered securities, which can be monetized in a time frame consistent with our short-term stress assumptions. Loans, which comprise the largest component of our illiquid assets, are funded by our core customer deposits, with an excess coverage of 23% as of the end of 2Q10. We fund other illiquid assets, including real estate, pri-

¹ Primarily includes brokerage receivables/payables, positive/negative replacement values and cash collateral. ² Primarily includes excess of funding neutral liabilities (brokerage payables) over corresponding assets. ³ Primarily includes unencumbered trading assets, unencumbered investment securities and excess reverse repurchase agreements, after haircuts. ⁴ Excludes loans with banks. ⁵ Excludes due to banks and certificates of deposits.

vate equity and other long-term investments and a haircut for the illiquid portion of securities, with long-term debt and equity, where we try to maintain a substantial funding buffer. For further information, refer to the table "Balance sheet funding structure".

Our core customer deposits totaled CHF 271 billion as of the end of 2Q10, an increase of 2% compared to 1Q10, primarily due to inflows of deposits. These deposits are from clients with whom we have a broad and longstanding relationship. Core customer deposits exclude deposits from banks and certificates of deposits. We place a priority on maintaining and growing customer deposits, as they have proved to be a stable and resilient source of funding even in difficult market conditions. In 2Q10 our short-term debt increased to CHF 76 billion from CHF 58 billion in 1Q10, reflecting our measures to increase liquidity during the challenging markets. The percentage of unsecured funding from long-term debt, excluding non-recourse debt associated with the consolidation of variable interest entities, was 28% as of the end of 2Q10, down slightly from 30% in 1Q10. The weighted average maturity of long-term debt was 6.4 years (including certificates of deposits with a maturity of one year or longer, but excluding structured notes, and assuming callable securities are redeemed at final maturity or in 2030 for instruments without a stated final maturity).

Debt issuances and redemptions

Our capital markets debt issuance includes issues of senior and subordinated debt in US registered offerings and medium-term note programs, euro market medium-term note programs, Australian dollar domestic medium-term note programs and a Samurai shelf registration statement in Japan. As a global bank, we have access to multiple markets worldwide and our major funding operations include Zurich, New York, London and Tokyo. We use a wide range of products and currencies to ensure that our funding is efficient and well diversified across markets and investor types. Substantially all of our unsecured senior debt is issued without financial covenants that could trigger an increase of our cost of financing or accelerate the maturity of the debt, including adverse changes in our credit ratings, cash flows, results of operations or financial ratios.

In 2Q10, the Bank issued CHF 3.4 billion of senior debt with maturities ranging between two and ten years. The Bank also raised CHF 267 million in multiple tranches of covered bonds with maturities ranging between four and thirteen years. Senior debt of CHF 3.8 billion, subordinated debt of CHF 801 million and covered bonds of CHF 168 million matured.

Capital management

Our consolidated BIS tier 1 ratio was 16.3% as of the end of 2Q10, compared to 16.4% as of the end of 1Q10, reflecting increased RWAs partially offset by a higher capital base. Our core tier 1 ratio was 11.4% as of the end of 2Q10 compared to 11.3% in 1Q10.

In 2Q10, the Bank called EUR 250 million and CHF 150 million of hybrid tier 1 capital instruments.

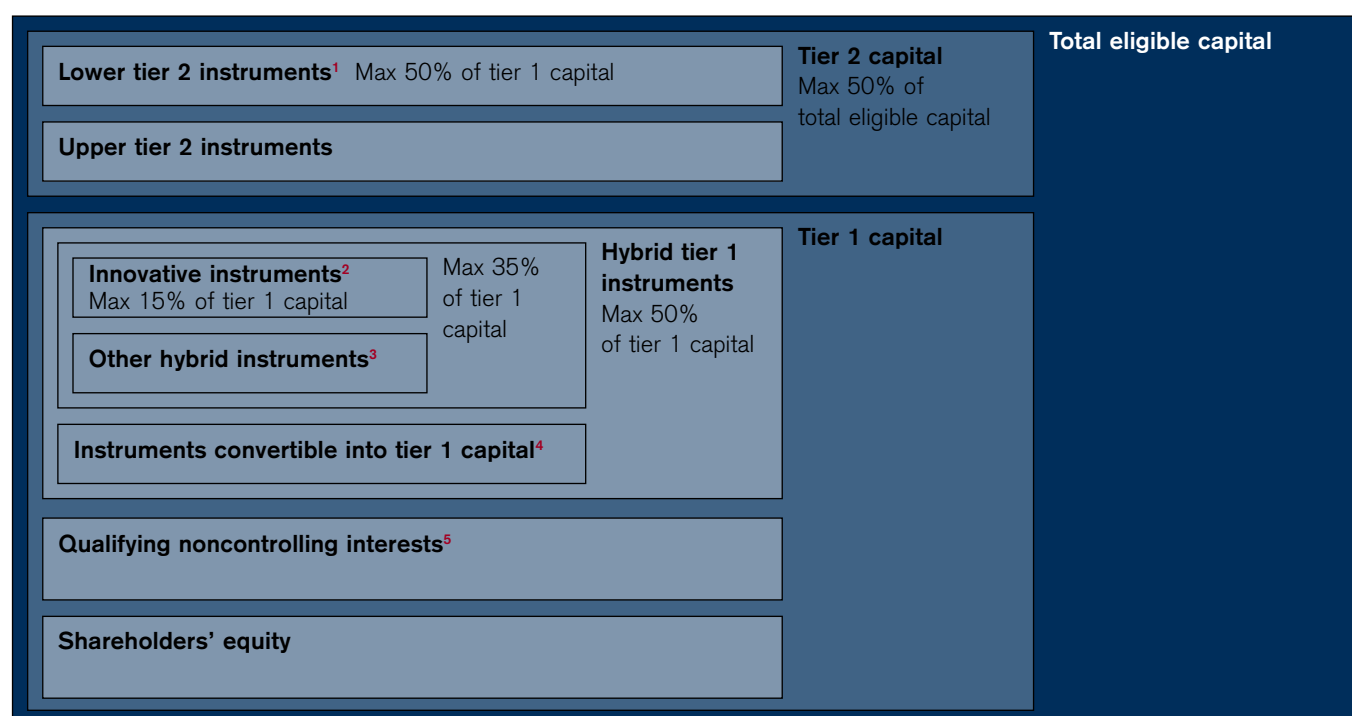

Both the Group and the Bank are subject to BIS and FINMA regulatory capital requirements, including leverage ratios of tier 1 capital to adjusted average assets. Under these requirements we must maintain by 2013 a minimum leverage ratio of 3% at the Group and Bank consolidated level. The leverage ratios for the Group and Bank consolidated level as of the end of 2Q10 were 3.9% and 3.7%, respectively. The decline in the leverage ratios from the end of 1Q10 was due to the increase in adjusted average assets. The increase in

adjusted average assets reflected the significant foreign exchange translation impact of the strengthening of the US dollar against the Swiss franc as of the end of April and May, as adjusted average assets are calculated as the average of the month-end values for the previous three calendar months.

Under FINMA requirements that impose an increase in market risk capital for every regulatory VaR backtesting exception over ten in the prior rolling 12 month period, we had no backtesting exceptions in 2Q10 and consequently the market risk capital multipliers remained at the FINMA and BIS minimum levels. For the purposes of this charge, backtesting exceptions are calculated using a subset of actual daily trading revenues that includes only the impact of daily movements in financial market variables such as interest rates, equity prices and foreign exchange rates on the previous night's positions.

For further information, refer to III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2009.

Capital structure

Percentages refer to tier 1 and total eligible capital before capital deductions.

¹ Lower tier 2 capital will no longer qualify for regulatory capital after 2020 but can be issued through 2010. ² Hybrid instruments in the form of non-cumulative perpetual preferred securities and capital notes that either have a fixed maturity or an incentive to repay, such as a step-up in the coupon if the instrument is not redeemed when callable. ³ Hybrid instruments in the form of non-cumulative perpetual preferred securities and capital notes that have no fixed maturity and no incentive for repayment. ⁴ Hybrid instruments with a pre-defined mechanism that converts them into tier 1 capital, such as mandatory convertible bonds convertible into common shares. ⁵ Qualifying noncontrolling interests including common shares in majority owned and consolidated banking and finance subsidiaries and tier 1 capital securities securing deeply subordinated notes issued by SPEs.

¹ Total assets are calculated as the average of the month-end values for the previous three calendar months. ² Excludes Swiss interbank lending.

Regulatory capital – Group

The decrease in the tier 1 ratio compared to 1Q10 reflected a 2% increase in RWAs, which was partially offset by an increase in tier 1 capital.

Tier 1 capital increased CHF 0.5 billion to CHF 38.0 billion as of the end of 2Q10. The increase was substantially driven by net income (excluding the impact of fair value gains/(losses) on Credit Suisse debt, net of tax) and foreign exchange translation impacts, partially offset by a dividend accrual in the quarter, the call of the two hybrid tier 1 instruments and the effect of share-based compensation (including the purchase of treasury shares to satisfy obligations under share-based plans). Total eligible capital increased CHF 1.3 billion to CHF 50.8 billion, primarily due to an increase in the fair value of tier 2 instruments (excluding the impact of fair value gains/(losses) on Credit Suisse debt) and the benefit from increased eligible credit provisions over expected losses, partially offset by the regulatory amortization of lower tier 2 instruments and foreign exchange translation impacts.

RWAs increased 2% to CHF 233 billion as of the end of 2Q10, reflecting both foreign exchange translation impacts and increases across credit, market and operational risk. The

increase in credit risk mainly related to Asset Management and Private Banking. The increase in Asset Management reflected the election of fair value for certain private equity investments for regulatory capital purposes, while Private Banking was driven by increased lending. For further information regarding market risk, refer to Risk management – Market risk.

Our total capital ratio was 21.8% as of the end of 2Q10, compared to 21.6% as of the end of 1Q10, primarily reflecting the higher eligible capital offset in part by the increase in RWAs. For further information, refer to the table “BIS Statistics”.

As of end of 2Q10 we had CHF 1.8 billion of qualifying non-controlling interests, of which CHF 1.6 billion were tier 1 capital securities secured by participation securities issued by the Bank, and CHF 12.2 billion of tier 1 capital hybrid instruments, of which CHF 3.3 billion were innovative instruments.

Regulators continued to focus on minimum bank capital requirements, harmonization of capital requirements, the improved quality of tier 1 capital and the continued inclusion in regulatory capital of tier 2 instruments. For further information, refer to – Regulatory developments.

¹ Includes cumulative fair value adjustments on Credit Suisse debt, net of tax, anticipated but not yet declared dividends, the net long position in own treasury shares in the trading book and an adjustment for the accounting treatment of pension plans. ² Non-cumulative perpetual preferred securities and capital notes. The FINMA has advised that Credit Suisse Group and the Bank may continue to include as tier 1 capital CHF 1.2 billion and CHF 4.1 billion, respectively, in 2Q10 (1Q10: CHF 1.7 billion and CHF 4.4 billion, respectively; 4Q09: CHF 1.7 billion and CHF 4.4 billion, respectively) of equity from special purpose entities that are deconsolidated under US GAAP. Hybrid tier 1 capital represented 31.5% and 31.8% of the Group's and the Bank's adjusted tier 1 capital, respectively, as of the end of 2Q10 (1Q10: 32.3% and 31.7%, respectively; 4Q09: 32.9% and 32.7%, respectively). Under the decree with the FINMA, a maximum of 35% of tier 1 capital can be in the form of these hybrid capital instruments.

Risk-weighted assets

end of 2Q10 (CHF billion)

¹ Includes primarily trading assets, investment securities and other investments. ² Includes central bank funds sold, securities purchased under resale agreements and central bank funds purchased, securities sold under repurchase agreements and securities lending transactions.

The chart illustrates the main types of balance sheet positions and off-balance sheet exposures that translate into market, credit, operational and non-counterparty risk RWAs. Market risk RWAs reflect the capital requirements of potential changes in the fair values of financial instruments in response to market movements inherent in both the balance sheet and the off-balance sheet items. Credit risk RWAs reflect the capital requirements for the possibility of a loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations or as a result of a deterioration in the

credit quality of the borrower or counterparty. Operational risk RWAs reflect the capital requirements for the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. Non-counterparty risk RWAs primarily reflect the capital requirements for our premises and equipment.

It is not the nominal size, but the nature (including risk mitigation such as collateral or hedges), of the balance sheet positions or off-balance sheet exposures that determines the RWAs.

¹ Tangible shareholders' equity attributable to shareholders is calculated by deducting goodwill and other intangible assets from total shareholders' equity attributable to shareholders. Management believes that the return on tangible shareholders' equity attributable to shareholders is meaningful as it allows for the consistent measurement of the performance of businesses without regard to whether the businesses were acquired.

Shareholders' equity

Our shareholders' equity decreased CHF 1.2 billion to CHF 35.6 billion as of the end of 2Q10 from CHF 36.8 billion as of the end of 1Q10. The decrease in shareholders' equity reflected the cash dividend payment for 2009 and the effect of share-based compensation (including the purchase of treasury shares to satisfy obligations under share-based plans), partially offset by the net income in 2Q10 and the change in other comprehensive income, reflecting the positive impact of foreign exchange rate changes on cumulative translation adjustments.

Regulatory developments

In April 2010, we agreed on revised liquidity principles with FINMA, following its consultation with the SNB to ensure that the Group and the Bank have adequate holdings on a consolidated basis of liquid, unencumbered, high-quality securities

available in a crisis situation for designated periods of time. The principles went into effect as of the end of 2Q10. The crisis scenario assumptions include global market dislocation, large on- and off-balance sheet outflows, no access to unsecured wholesale funding markets, a significant withdrawal of deposits, varying access to secured market funding and the impacts from fears of insolvency. The principles aim to ensure we can meet our financial obligations in an extreme scenario for a minimum of 30 days. The principles take into consideration quantitative and qualitative factors and require us to address the possibility of emergency funding costs as we manage our capital and business. The principles call for additional reporting to FINMA. These principles may be modified to reflect the final BCBS liquidity requirements.

In December 2009, the BCBS published consultative proposals to strengthen the resilience of the banking sector (known as Basel III). The proposals are aimed at strengthening capital and liquidity regulations. The BCBS proposals are not expected to be finalized until later in 2010. The BCBS is con-

¹ Primarily includes anticipated dividends and unrealized gains on owned real estate. Economic adjustments are made to tier 1 capital to enable comparison between capital utilization and resources. ² Includes owned real estate risk, expense risk, pension risk, foreign exchange risk between economic capital resources and utilized economic capital, diversification benefit and an estimate for the impacts of certain methodology changes planned for 2010. ³ Includes primarily expense risk diversification benefits from the divisions and foreign exchange risk between economic capital resources and utilized economic capital. ⁴ Includes a diversification benefit of CHF 14 million. ⁵ Includes a diversification benefit of CHF 14 million.

ducting an impact assessment following submissions from the industry. Final BCBS requirements are expected to be implemented over a period of time. The impact of these proposals on us will be assessed as the details and timing of the implementation are clarified.

In June 2010, the BCBS announced its decision to postpone to no later than December 31, 2011 the implementation of the revisions to the Basel II market risk framework. The FINMA has indicated that it expects to implement the revisions related to RWAs and eligible capital by the original implementation date of January 2011 for FINMA regulatory capital purposes. The final BCBS requirements may be adjusted when implemented by FINMA and our other regulators.

For further information, refer to I – Credit Suisse Results – Core Results – Regulatory proposals and developments.

Economic capital

Overview

Economic capital is used as a consistent and comprehensive tool for risk management, capital management and performance measurement. Economic capital measures risks in terms of economic realities rather than regulatory or accounting rules and is the estimated capital needed to remain solvent and in business, even under extreme market, business and operational conditions, given our target financial strength (our long-term credit rating).

For further information, refer to III – Treasury, Risk, Balance sheet and Off-balance sheet – Treasury management in the Credit Suisse Annual Report 2009.

We regularly review the economic capital methodology in order to ensure that the model remains relevant as markets

and business strategies evolve. In 2Q10, we reduced the severity of the confidence level scaling factor for 99.97% position risk (for capital management purposes) for commercial real estate exposures following last year's changes in methodology and parameters for 99% position risk (for risk management purposes). Within other risks, we made a number of refinements to the modeling of pension risk. We also increased the shock severity for certain owned real estate risk. Prior period balances have been restated for methodology changes in order to show meaningful trends. The total impact of methodology changes on 1Q10 economic capital was an increase of CHF 168 million, or 1%.

There are a number of planned revisions to Basel II market risk over the next two years, such as an incremental charge to capture default risk on trading book assets. These changes already form part of our economic capital framework, and we do not expect material future impacts to our economic capital from these changes. Any implications of the BCBS proposals on the economic capital framework will be assessed as the details and timing of the implementation are clarified. For further information, refer to I – Credit Suisse results – Core Results – Regulatory proposals and developments.

Utilized economic capital trends

In 2Q10, our utilized economic capital increased 5%. Excluding the US dollar translation impact against the Swiss franc, utilized economic capital increased 4% due to higher pension risk, reflecting updates to asset and liability valuations, interest rate risk on treasury positions within other risks and emerging markets and international lending & counterparty position risks, partially offset by reductions in fixed income trading position risks.

For Investment Banking, utilized economic capital increased 5% due to increases in interest rate risk on treasury positions within other risks as well as increasing emerging markets and international lending & counterparty position risks, partially offset by reductions in fixed income trading position risks. Excluding the US dollar translation impact against the Swiss franc, utilized economic capital increased 3%.

For Private Banking, utilized economic capital increased 12% due to increases in pension risk, reflecting updates to asset and liability valuations.

For Asset Management, utilized economic capital increased 9%, primarily due to higher equity trading & investments position risk. Excluding the US dollar translation impact against the Swiss franc, utilized economic capital increased 7%.

For Corporate Center, utilized economic capital decreased in 2Q10 following a reduction in foreign exchange risk between utilized economic capital and economic capital resources.

For further information on our position risk, refer to Risk management – Key position risk trends.

Capital adequacy trends

The economic capital coverage ratio decreased from 132% in 1Q10 to 122% in 2Q10, primarily reflecting increased utilized economic capital and lower economic capital resources, due to lower economic adjustments, partially offset by an increase in tier 1 capital. Economic adjustments were down due to payment of dividends for 2009. Our coverage ratio is within our target band of 110% to 140%.

Risk management

Our overall position risk increased 2% in 2Q10. Excluding the US dollar translation impact, position risk was stable. Average risk management VaR increased 10% to CHF 116 million, and period-end risk management VaR increased 21% to CHF 157 million, compared to 1Q10.

Economic capital – Position risk

Position risk, which is a component of the economic capital framework, is our core Group-wide risk management tool. It is used to assess, monitor and report risk exposures throughout the Group and represents good market practice. Position risk is the level of unexpected loss in economic value on our portfolio of positions over a one-year horizon, which is exceeded with a given small probability (1% for risk management purposes and 0.03% for capital management purposes).

For further information, refer to III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management – Economic capital and position risk in the Credit Suisse Annual Report 2009.

We regularly review the economic capital methodology to ensure that the model remains relevant as markets and busi-

ness strategies evolve. There were no material changes to the economic capital methodology for risk management purposes in 2Q10. For capital management purposes, there were changes to the economic capital methodology. For further information, refer to Treasury management – Economic capital.

Key position risk trends

Position risk for risk management purposes at the end of 2Q10 increased 2% compared to the end of 1Q10. Position risk increased in real estate & structured assets, due to higher secondary RMBS and CMBS trading exposures, and reduced hedges in the CMBS exit business, in emerging markets, due to higher risks in Eastern Europe and Latin America, primarily

Prior period balances have been restated for methodology changes in order to show meaningful trends.

¹ This category comprises fixed income trading, foreign exchange and commodity exposures. ² This category comprises commercial and residential real estate, ABS exposure, real estate acquired at auction and real estate fund investments.

driven by increased foreign exchange trading and reduced hedges relating to exposures in Eastern Europe, and in international lending & counterparty exposures, reflecting counterparty downgrades and higher derivatives exposures in Investment Banking. Position risk also increased in equity trading & investments, due to new fund investments in Asset Management and traded equity risks from customer business. The increases were mostly offset by decreased position risks in fixed income trading, due to lower traded credit and foreign exchange trading exposures, and in private banking corporate & retail lending, due to updated loan default and recovery parameters. Excluding the US dollar translation impact against the Swiss franc, position risk was stable.

Compared to the end of 2Q09, position risk for risk management purposes increased 10%. The increase was primarily due to higher fixed income trading risk, reflecting higher traded credit and foreign exchange trading exposures, and higher real estate & structured assets risk, reflecting increased RMBS and CMBS trading exposures. Position risk also increased in equity trading & investments, due to higher private equity exposures in Asset Management, and in emerging markets, primarily in Eastern Europe. The increases were partially offset by reduced position risk in international lending

& counterparty exposures, reflecting lower derivatives exposures in Investment Banking, and in private banking corporate & retail lending, due to updated loan default and recovery parameters. Excluding the US dollar translation impact against the Swiss franc, position risk increased 11%.

As part of our overall risk management, we hold a portfolio of hedges. Hedges are impacted by market movements similar to other trading securities and may result in gains or losses which offset losses or gains on the portfolio they were designated to hedge. Due to the varying nature and structure of hedges, these gains or losses may not perfectly offset the losses or gains on the portfolio.

Market risk

We primarily assume market risk through the trading activities in Investment Banking. The other divisions also engage in trading activities, but to a much lesser extent. Trading risks are measured using VaR along with a number of other risk measurement tools. VaR is the potential loss in fair value of trading positions due to adverse market movements over a defined time horizon and for a specified confidence level. VaR

One-day, 99% VaR

Excludes risks associated with counterparty and own credit exposures.

¹ As the maximum and minimum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification benefit.

Daily risk management VaR

Excludes risks associated with counterparty and own credit exposures.

Actual daily trading revenues

Excludes Clariden Leu and Neue Aargauer Bank.

Trading revenues do not include valuation adjustments associated with counterparty and own credit exposures.

relies on historical data and is considered a useful tool for estimating potential loss in normal markets in which there are no abrupt changes in market conditions. Other tools, including stress testing, are more appropriate for modeling the impact from severe market conditions. We regularly review our VaR model to ensure that it remains appropriate given evolving market conditions and the composition of our trading portfolio.

As part of the ongoing review to improve risk management approaches and methodologies, we implemented a revised

VaR measure for risk management purposes in 2Q10. This revised VaR, referred to as risk management VaR, adjusts VaR in cases where short-term market volatility over a six-month period is different than long-term volatility in a three-year dataset. We believe this change makes VaR a more useful risk management tool and one that better reflects short-term market volatility. We have approval from FINMA to use this VaR methodology for risk management purposes. For market risk regulatory capital, we continue to use a scaled VaR methodol-

ogy, referred to as regulatory VaR, which adjusts VaR in cases where short-term market volatility is higher than long-term volatility in a three-year dataset. We have restated VaR for prior periods to show meaningful trends.

For both risk management VaR and regulatory VaR, we present one-day, 99% VaR, which is ten-day VaR adjusted to a one-day holding period based on a 99% confidence level. This means there is a 1-in-100 chance of incurring a daily mark-to-market trading loss at least as large as the reported VaR. In order to show the aggregate market risk in our trading books, the chart entitled "Daily risk management VaR" shows the trading-related market risk on a consolidated basis.

Average risk management VaR during 2Q10 increased 10% to CHF 116 million from 1Q10, and decreased 23% from 2Q09. The increase in average risk management VaR from 1Q10 reflected increased foreign exchange risk in support of our client flow businesses across fixed income and decreased diversification benefit.

Period-end risk management VaR as of the end of 2Q10 increased 21% to CHF 157 million from the end of 1Q10, and increased 57% from the end of 2Q09. The increase in period-end risk management VaR from 1Q10 reflected increased short-term volatility and increased foreign exchange exposures, partially offset by decreased interest rate & credit spread risk relating to reduced investment grade and leveraged finance trading exposure.

In 2Q10, average regulatory VaR was CHF 149 million, an increase of 10% from 1Q10 and a decrease of 1% from 2Q09. The increase in average regulatory VaR from 1Q10 reflected increased foreign exchange exposures, partially offset by decreased interest rate & credit spread risk relating to reduced investment grade and leveraged finance trading exposure.

Period-end regulatory VaR as of the end of 2Q10 increased 4% to CHF 191 million from the end of 1Q10, and increased 91% from the end of 2Q09, primarily reflecting increased RMBS activity in support of customer flow business following the risk reduction in exit businesses in Investment Banking at the end of 2Q09. Regulatory VaR continues to be driven by the extreme market volatility of 4Q08 in the three-year dataset.

Various techniques are used to assess the accuracy of the VaR models, including backtesting. In line with industry practice, we present backtesting using actual daily trading revenues. Actual daily trading revenues are compared with regulatory VaR calculated using a one-day holding period. A backtesting exception occurs when the trading revenue loss exceeds the daily VaR estimate. We had no regulatory VaR backtesting exceptions during 2Q10. The histogram entitled "Actual daily trading revenues" reflects the distribution of

actual daily trading revenues during 2Q10, 1Q10 and 2Q09. The width of this distribution provides another indication of the day-to-day risk in our trading activities. For further information on the use of our regulatory VaR model in the calculation of trading book market risk capital requirements, refer to Treasury management – Capital management.

We assume non-trading interest rate risk through interest rate-sensitive positions originated by Private Banking and risk-transferred to Treasury, money market and funding activities by Treasury and the deployment of our consolidated equity as well as other activities, including market making and trading activities involving banking book positions at the divisions, primarily Investment Banking. Savings accounts and many other retail banking products have no contractual maturity date or direct market-linked interest rate and are risk-transferred from Private Banking to Treasury on a pooled basis using replicating portfolios (approximating the re-pricing behavior of the underlying product). Treasury and other desks running interest rate risk positions actively manage the positions within approved limits.

The impact of a one basis point parallel increase of the yield curves on the fair value of interest rate-sensitive non-trading book positions would have been an increase of CHF 7.7 million as of the end of 2Q10, compared to an increase of CHF 8.2 million as of the end of 1Q10.

Credit risk

Credit risk is the possibility of a loss being incurred as the result of a borrower or counterparty failing to meet its financial obligations. In the event of a default, a bank generally incurs a loss equal to the amount owed by the debtor, less any recoveries resulting from foreclosure, liquidation of collateral or the restructuring of the debtor company.

The majority of our credit risk is concentrated in Private Banking and Investment Banking. Credit risk exists within lending products, commitments and letters of credit, and results from counterparty exposure arising from derivatives, foreign exchange and other transactions and may be on or off-balance sheet.

Our regular review of the creditworthiness of clients and counterparties does not depend on the accounting treatment of the asset or commitment. Adverse changes in the creditworthiness of counterparties of loans held at fair value are reflected in valuation changes reported directly in revenues, and therefore are not part of the impaired loans balance. For further information on credit risk, refer to III – Treasury, Risk, Balance sheet and Off-balance sheet – Risk management – Credit risk in the Credit Suisse Annual Report 2009. For fur-

ther information on counterparty credit risk, refer to Note 25 – Fair value of financial instruments in V – Condensed consolidated financial statements – unaudited.

We believe our risk-based credit exposure to Portugal, Italy, Ireland, Greece and Spain was not material to our financial condition as of the end of 2Q10.

The following table represents credit risk from loans, loan commitments and certain other contingent liabilities, loans

held-for-sale, traded loans and derivative instruments before consideration of risk mitigation such as cash collateral and marketable securities or credit hedges. Loan commitments include irrevocable credit facilities for Investment Banking and Private Banking and, additionally in Private Banking, unused credit limits which can be revoked at our sole discretion upon notice to the client.

Before risk mitigation, for example, collateral, credit hedges.

¹ Positive replacement value after netting agreements.

Loan exposure

Compared to the end of 1Q10, gross loans were stable at CHF 228.5 billion. In Private Banking, gross loans increased 2% to CHF 182.2 billion across most businesses. Gross loans in Investment Banking decreased 10% to CHF 46.3 billion, mainly due to declines in loans to financial institutions and commercial and industrial clients. Gross impaired loans decreased 12% to CHF 2.0 billion. Impaired loans declined primarily in Investment Banking, driven by an improvement in the credit outlook of several counterparties and loan repayments. A portion of the impaired loans in Investment Banking is economically hedged by insurance and other risk mitigation, including credit default swaps (CDS). Impaired loans in Private Banking declined 6%, mainly due to loan repayments and write-offs.

We recorded net provision for credit losses of CHF 20 million in 2Q10, compared to a net release of provision of CHF 50 million in 1Q10, with a net provision of CHF 17 million and CHF 3 million in Investment Banking and Private Banking, respectively. For further information refer to II – Results by division – Private Banking and Investment Banking.

Compared to the end of 2Q09, gross loans decreased 7%, mainly in Investment Banking. Gross loans in Private Banking increased 3%. In Investment Banking, we had strong decreases in loans to financial institutions and in commercial and industrial loans. Gross impaired loans decreased CHF 535 million, or 21%, mainly driven by lower non-performing loans and potential problem loans in Investment Banking, but also due to reduced non-performing and non-interest-earning loans in Private Banking.

Report of Independent Registered Public Accounting Firm to the Board of Directors of

Credit Suisse Group AG, Zurich

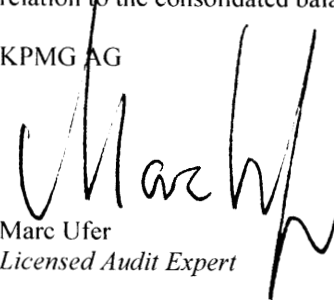

We have reviewed the accompanying condensed consolidated balance sheets of Credit Suisse Group AG and subsidiaries (the “Group”) as of June 30, 2010 and 2009 and the related condensed consolidated statements of operations and comprehensive income for the three and six-month periods ended June 30, 2010 and 2009 and the related condensed consolidated statements of changes in equity and cash flows for the six-month periods ended June 30, 2010 and 2009. These condensed consolidated financial statements are the responsibility of the Group's management.

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to the condensed consolidated financial statements referred to above for them to be in conformity with U.S. generally accepted accounting principles.

We have previously audited, in accordance with standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of the Group as of December 31, 2009, and the related consolidated statements of operations, changes in equity, comprehensive income and cash flows for the year then ended (not presented herein); and in our report dated March 25, 2010, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 2009, is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.

Notes to the condensed consolidated financial statements – unaudited

Note 1 Summary of significant accounting policies

Basis of presentation

The accompanying unaudited condensed consolidated financial statements of Credit Suisse Group AG (the Group) are prepared in accordance with accounting principles generally accepted in the United States of America (US GAAP) and are stated in Swiss francs (CHF). These condensed consolidated financial statements should be read in conjunction with the US GAAP consolidated financial statements and notes thereto for the year ended December 31, 2009, included in the Credit Suisse Annual Report 2009. For a description of the Group's significant accounting policies, refer to Note 1 – Summary of significant accounting policies in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2009.

Certain financial information, which is normally included in annual consolidated financial statements prepared in accordance with US GAAP but not required for interim reporting purposes, has been condensed or omitted. Certain reclassifications have been made to the prior period's consolidated financial statements to conform to the current period's presentation. These condensed consolidated financial statements reflect, in the opinion of management, all adjustments that are necessary for a fair presentation of the condensed consolidated financial statements for the periods presented. The presentation of period over period change, the 1Q10 consolidated statements of operations and consolidated balance sheet and the 2Q09 consolidated balance sheet have been added for convenience of the reader and are not a required presentation under US GAAP. The results of operations for interim periods are not indicative of results for the entire year.

In preparing these condensed consolidated financial statements, management is required to make estimates and assumptions which affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as of the date of the condensed consolidated balance sheets and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

FASB establishes Accounting Standards Codification

In June 2009, the Financial Accounting Standards Board (FASB) established the FASB Accounting Standards Codification (Codification or ASC) as the single authoritative source of US GAAP. The Codification became effective July 1, 2009 and supersedes all existing non-SEC accounting and reporting standards. Under the Codification, the FASB will not issue new accounting standards in the form of Standards, FASB Staff Positions or Emerging Issues Task Force Abstracts. The FASB will instead issue Accounting Standards Updates (ASU), which will serve to update the Codification, provide background information about the guidance and provide the basis for conclusions on changes to the Codification. United States (US) Securities and Exchange Commission (SEC) rules and interpretive releases remain in force for SEC registrants.

The Codification is not intended to change US GAAP, but it will change the manner in which authoritative accounting guidance is organized, presented and referenced. These financial statements include references only to the Codification topics.

Recently adopted accounting standards

The following provides the most relevant recently adopted accounting standards. For a complete description of recently adopted accounting standards, refer to Note 2 – Recently issued accounting standards in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2009.

ASC Topic 260 – Earnings Per Share

In June 2008, the FASB provided guidance for when certain instruments granted in share-based payment transactions are participating securities prior to vesting and, therefore, need to be included in computing earnings per share under the two class method.

The Group adopted the guidance as of January 1, 2009. All prior-period earnings per share data presented has been adjusted retrospectively to conform with the guidance.

ASC Topic 320 – Investments – Debt and Equity Securities

In April 2009, the FASB updated accounting guidance regarding recognition and presentation of other-than-temporary impairments. The update amends the other-than-temporary impairment guidance in US GAAP for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities in the financial statements.

The guidance was effective for interim and annual reporting periods ending after June 15, 2009. The adoption of the guidance did not have a material impact on the Group's financial condition, results of operations or cash flows. For further information, refer to Note 14 – Investment securities.

In April 2009, the SEC issued Staff Accounting Bulletin (SAB) No. 111, "Miscellaneous Accounting – Other Than Temporary Impairment of Certain Investments in Equity Securities" (SAB 111). SAB 111 addresses the guidance provided in the ASU regarding other-than-temporary impairments and retains the SEC staff's views as to whether an impairment of an equity security is other-than-temporary.

SAB 111 was effective for interim and annual reporting periods ending after June 15, 2009. The adoption of SAB 111 did not have a material impact on the Group's financial condition, results of operations or cash flows.

ASC Topic 805 – Business Combinations

In April 2009, the FASB issued guidance to address application issues raised by preparers, auditors and members of the legal profession on initial recognition and measurement, subsequent measurement and accounting and disclosure of assets and liabilities arising from contingencies in a business combination.

The guidance was effective for assets and liabilities arising from contingencies in business combinations from January 1, 2009. The adoption of the guidance did not have a material impact on the Group's financial condition, results of operations or cash flows.

In December 2007, the FASB updated accounting guidance regarding business combinations to require an acquiring entity to recognize all assets acquired, liabilities assumed and any noncontrolling interest in the acquiree at their fair values at the acquisition date.

The guidance also requires substantial new disclosures and changes the accounting treatment for the recognition of acquisition costs, restructuring costs and in-process research and development as well as the recognition and subsequent measurement of acquired contingent liabilities.

The Group has applied the guidance prospectively to business combinations that occurred after January 1, 2009 and

there was no impact arising from the exception for income taxes that was applicable to business combinations consummated prior to January 1, 2009.

ASC Topic 810 – Consolidation

In February 2010, the FASB issued ASU 2010-10, "Amendments for Certain Investment Funds" (ASU 2010-10), an update to Topic 810 – Consolidation. The amendments to the consolidation requirements of Topic 810 resulting from the issuance of Statement of Financial Accounting Standards (SFAS) No. 167, "Amendments to FASB Interpretation No. 46(R)" (SFAS 167) are deferred for a reporting entity's interest in an entity (1) that has all the attributes of an investment company or (2) for which it is industry practice to apply investment company accounting. The deferral does not apply in situations in which a reporting entity has the explicit or implicit obligation to fund losses of an entity that could potentially be significant to the entity. The deferral also does not apply to interests in securitization entities, asset-backed financing entities, or entities formerly considered qualified special purpose entities. An entity that qualifies for deferral will continue to be assessed under the overall guidance on the consolidation of variable interest entities (VIEs) in Subtopic 810-10 (before the SFAS 167 amendments) or other applicable consolidation guidance, such as the guidance for consolidation of partnerships in Subtopic 810-20. The amendments in ASU 2010-10 do not defer the disclosure requirements in the SFAS 167 amendments to Topic 810.

ASU 2010-10 is effective for annual reporting periods that begin after November 15, 2009 (January 1, 2010 for the Group) and for interim and annual reporting periods thereafter. The impact of adopting ASU 2010-10 on January 1, 2010 is included in the impacts below regarding the adoption of ASU 2009-17.

In January 2010, the FASB issued ASU 2010-02, "Accounting and Reporting for Decreases in Ownership of a Subsidiary – a Scope Clarification", (ASU 2010-02). ASU 2010-02 provides amendments to Subtopic 810-10 to clarify the scope of the decrease in ownership provisions. The amendment also clarifies the transactions to which the decrease in ownership guidance in Subtopic 810-10 does not apply. ASU 2010-02 also expands the disclosure about the deconsolidation of a subsidiary or derecognition of a group of assets within Subtopic 810-10.

The Group adopted the provisions of ASU 2010-02 retrospectively to January 1, 2009. The adoption of the guidance did not have an impact on the Group's financial condition, results of operations or cash flows.

In December 2009, the FASB issued ASU 2009-17, "Improvements to Financial Reporting by Enterprises Involved

with Variable Interest Entities" (ASU 2009-17). ASU 2009-17 was issued to update the Codification for the June 2009 issuance of SFAS 167. ASU 2009-17 changes how a reporting entity determines when an entity that is insufficiently capitalized or is not controlled through voting (or similar rights) should be consolidated. Under this standard, the determination of whether a reporting entity is required to consolidate another entity is based on, among other things, the other entity's purpose and design and the reporting entity's ability to direct the activities of the other entity that most significantly impact the other entity's economic performance.

ASU 2009-17 is effective for annual reporting periods that begin after November 15, 2009 (January 1, 2010 for the Group) and for interim and annual reporting periods thereafter.

The adoption of ASU 2009-17 on January 1, 2010 resulted in an increase of CHF 15.0 billion to our consolidated balance sheet and a reduction in total shareholders' equity of CHF 2.2 billion, net of tax. The consolidation of these entities did not have an impact on tier 1 capital or risk-weighted assets. For further information, refer to Note 24 – Transfers of financial assets and variable interest entities.

Upon consolidation, transactions between the Group and the formerly unconsolidated entities became intercompany transactions and are eliminated.

In December 2007, the FASB issued guidance to establish accounting and reporting standards for a noncontrolling interest in a subsidiary and for deconsolidation of a subsidiary.

The guidance requires the recognition of a noncontrolling interest as equity in the consolidated financial statements separate from the parent's equity. In addition, net income attributable to the noncontrolling interest must be included in consolidated net income on the face of the income statement. The guidance clarifies that changes in a parent's ownership interest in a subsidiary that do not result in deconsolidation are equity transactions if the parent retains its controlling financial interest. The guidance has additional disclosure requirements that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners.

The Group adopted the presentation and transaction guidance of the ASU as of January 1, 2009.

ASC Topic 815 – Derivatives and Hedging

In June 2008, the FASB issued guidance to require an entity to evaluate whether an equity-linked financial instrument is indexed to its own stock using a two step approach. The first step requires entities to evaluate the instrument's contingent exercise provisions, if any. The second step requires entities to evaluate the instrument's settlement provisions.

The Group adopted the guidance as of January 1, 2009. Adoption of the guidance did not have a material impact on

the Group's financial condition, results of operations or cash flows.

In March 2008, the FASB amended and expanded the disclosure requirements for derivative instruments and hedging activities with the intent to provide users of financial statements with an enhanced understanding of: i) how and why an entity uses derivative instruments; ii) how derivative instruments and related hedge items are accounted for under the Codification; and iii) how derivative instruments and related hedge items affect an entity's financial position, financial performance and cash flows.

The ASU requires qualitative disclosures about objectives and strategies for using derivatives, quantitative disclosures about fair value gains and losses on derivative instruments and credit-risk-related contingent features in derivative agreements.

The ASU mandates additional disclosures and, as such, did not impact the Group's financial position, results of operations or cash flows when adopted as of January 1, 2009. For further information, refer to Note 22 – Derivatives and hedging activities.

ASC Topic 820 – Fair Value Measurements and Disclosures

In January 2010, the FASB issued ASU 2010-06, "Improving Disclosures about Fair Value Measurements" (ASU 2010-06), an update to Topic 820 – Fair Value Measurements and Disclosures. ASU 2010-06 requires both new and clarifies existing fair value measurement disclosures. The new requirements include disclosure of significant transfers in and out of level 1 and 2 and gross presentation of purchases, sales, issuances, and settlements in the reconciliation of beginning and ending balances of level 3 instruments. The clarifications required by ASU 2010-06 include the level of disaggregation in the fair value hierarchy and level 3 reconciliation of assets and liabilities by class of financial instrument. In addition the ASU expanded disclosures about the valuation techniques and inputs used to measure fair value for both recurring and nonrecurring fair value measurements included in levels 2 and 3 of the fair value hierarchy.

The new disclosures and clarifications are effective for interim and annual periods beginning after December 15, 2009, except the disclosures about purchases, sales, issuances, and settlements in reconciliation of beginning and ending balances of level 3 instruments, which are effective for fiscal years beginning after December 15, 2010. ASU 2010-06 is an update only for disclosures and as such did not impact the Group's financial position, results of operations or cash flows. For further information, refer to Note 25 – Fair value of financial instruments.

In September 2009, the FASB issued ASU 2009-12, “Investments in Certain Entities that Calculate Net Asset Value per Share (or its Equivalent)” (ASU 2009-12), an update to Topic 820 – Fair Value Measurements and Disclosures. ASU 2009-12 is applicable to an investment that has the attributes defined by ASC 946, Financial Services – Investment Companies, but does not have a readily determinable fair value. For those investments that are within its scope, ASU 2009-12 permits, as a practical expedient, an entity to measure the fair value of an investment using net asset value (NAV) per share of the investment and also requires additional disclosures. ASU 2009-12 also provides guidance regarding classification within the fair value hierarchy.

ASU 2009-12 was effective for periods ending after December 15, 2009. The adoption of ASU 2009-12 on December 31, 2009 did not have a material impact on the Group’s financial condition, results of operations, cash flows or net classification within the fair value hierarchy. For further information, refer to Note 25 – Fair value of financial instruments.

In August 2009, the FASB issued ASU 2009-05, “Measuring Liabilities at Fair Value” (ASU 2009-05), an update to Topic 820 – Fair Value Measurements and Disclosures. ASU 2009-05 provides clarification on how a liability is to be measured when a quoted price in an active market for an identical liability is not available. In addition, ASU 2009-5 provides clarification that a reporting entity is not required to include a separate input or adjustment to other inputs relating to the existence of a restriction that prevents the transfer of a liability.

ASU 2009-05 is effective for the first reporting period beginning after issuance, however early application is permitted. The adoption of ASU 2009-05 on October 1, 2009 did not have a material impact on the Group’s financial condition, results of operations or cash flows.

In April 2009, the FASB provided additional guidance regarding the determination of fair value when the volume and level of activity for an asset or liability have significantly decreased and for identifying transactions that are not orderly. The ASU has additional disclosure requirements.

The guidance was effective prospectively for interim and annual reporting periods ending after June 15, 2009. The adoption of the guidance on June 30, 2009 did not have a material impact on the Group’s financial condition, results of operations or cash flows.

ASC Topic 825 – Financial Instruments

In April 2009, the FASB issued guidance to require disclosures for publicly traded companies about fair value of financial instruments for interim reporting periods as well as in annual financial statements.

The guidance was effective for interim reporting periods ending after June 15, 2009. The guidance mandates additional disclosures and, as such, did not impact the Group’s financial position, results of operations or cash flows.

ASC Topic 855 – Subsequent Events

In February 2010, the FASB issued ASU 2010-09, “Amendments to Certain Recognition and Disclosure Requirements” (ASU 2010-09), an update to Topic 855 – Subsequent Events. ASU 2010-09 provides amendments as follows:

- (i) an entity that either (a) is an SEC filer or (b) is a conduit bond obligor for conduit debt securities that are traded in a public market is required to evaluate subsequent events through the date that the financial statements are issued;
- (ii) an entity that is an SEC filer is not required to disclose the date through which subsequent events have been evaluated; and
- (iii) the scope of the reissuance disclosure requirements is refined to include revised financial statements only.

ASU 2010-09 was effective upon issuance. The adoption of the guidance did not have a material impact on the Group’s financial condition, results of operations or cash flows.

In May 2009, the FASB updated accounting guidance regarding subsequent events. The update provides additional guidance on:

- (i) the period after the balance sheet date during which management of a reporting entity shall evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements;
- (ii) the circumstances under which an entity shall recognize events or transactions occurring after the balance sheet date in its financial statements; and
- (iii) the disclosures that an entity shall make about events or transactions that occurred after the balance sheet date.

The guidance was effective prospectively for interim and annual reporting periods ending after June 15, 2009. The adoption of the guidance on June 30, 2009 did not have a material impact on the Group’s financial condition, results of operations or cash flows.

ASC Topic 860 – Transfers and Servicing

In December 2009, the FASB issued ASU 2009-16, “Accounting for Transfer of Financial Assets” (ASU 2009-16). ASU 2009-16 was issued to update the Codification for the June 2009 issuance of SFAS No. 166, “Accounting for Transfer of Financial Assets – an amendment of FASB Statement No. 140”, which previously had not been incorporated into the Codification. ASU 2009-16 requires additional disclosures

about the transfer of financial assets, including securitization transactions, and continuing exposure to the risks related to transferred financial assets. It eliminates the concept of a "qualifying special-purpose entity". ASU 2009-16 also changes the requirements for derecognizing financial assets.

ASU 2009-16 is effective for annual periods that begin after November 15, 2009 (January 1, 2010 for the Group) and for interim and annual reporting periods thereafter. This standard applies to prospective transactions entered into after the effective date and generally relates to whether transactions will be recognized as sales or secured financings for accounting purposes but will not change the economics of the underlying transactions. The adoption of ASU 2009-16 on January 1, 2010 did not have a material impact on the Group's financial condition, results of operations or cash flows.

In February 2008, the FASB issued guidance regarding a repurchasing financing, which is a repurchase agreement that relates to a previously transferred financial asset between the same counterparties that is entered into contemporaneously with, or in contemplation of, the initial transfer. The guidance mandates that a transferor and transferee shall not separately account for a transfer of a financial asset and a related repurchase financing unless the two transactions have a valid and distinct business or economic purpose for being entered into separately and the repurchase financing does not result in the initial transferor regaining control over the financial asset. The guidance establishes a presumption that an initial transfer and a repurchase financing are linked unless certain criteria are met. If the criteria are not met, the initial transfer is not accounted for as a sale by the transferor and the repurchase financing is accounted for as a forward contract.

The Group applied the guidance to all prospective transactions as of January 1, 2009. The adoption of the guidance did not have a material impact on the Group's financial condition, results of operations or cash flows.

Standards to be adopted in future periods

ASC Topic 815 – Derivatives and Hedging

In March 2010, the FASB issued ASU 2010-11, "Scope Exception Related to Embedded Credit Derivatives" (ASU 2010-11), an update to Topic 815 – Derivatives and Hedging. ASU 2010-11 provides clarification on the scope exception in Topic 815 to clarify the type of embedded credit derivatives that are exempt from embedded derivative bifurcation requirements. Only one form of embedded credit derivative qualifies

for the exemption and it relates only to the subordination of one financial instrument to another.

ASU 2010-11 is effective for the first fiscal quarter beginning after June 15, 2010 with early adoption permitted. The adoption of ASU 2010-11 on July 1, 2010 did not have a material impact on the Group's financial condition, results of operations or cash flows.

ASC Topic 310 – Receivables

In July 2010, the FASB issued ASU 2010-20, "Disclosures about the Credit Quality of Financing Receivables and the Allowance for Credit Losses" (ASU 2010-20), an update to Topic 310 – Receivables.

The amendments in ASU 2010-20 enhance disclosures about the credit quality of financing receivables and the allowance for credit losses. As a result of the update, entities are required to provide a greater level of disaggregated information about the credit quality of financing receivables and the allowance for credit losses. Entities are also required to disclose credit quality indicators, past due information, and modifications of its financing receivables. The enhanced disclosures will help financial statement users assess an entity's credit risk exposures and its allowance for credit losses.

The disclosures as of the end of a reporting period are effective for the first fiscal quarter ending after December 15, 2010. The disclosures about activity that occurs during a reporting period are effective for the first fiscal quarter beginning after December 15, 2010. ASU 2010-20 is an update only for disclosures and as such will not impact the Group's financial position, results of operations or cash flows.

In April 2010, the FASB issued ASU 2010-18, "Effect of a Loan Modification When the Loan Is Part of a Pool That Is Accounted for as a Single Asset" (ASU 2010-18), an update to Topic 310 – Receivables.

As a result of this update, modifications of loans that are accounted for within a pool do not result in the removal of these loans from the pool even if the modifications of those loans would otherwise be considered a troubled debt restructuring. An entity will continue to be required to consider whether the pool of assets in which the loan is included is impaired if expected cash flows for the pool change.

ASU 2010-18 is effective for the first fiscal quarter beginning after July 15, 2010, with early adoption permitted. The adoption of ASU 2010-18 is not expected to have a material impact on the Group's financial condition, results of operations or cash flows.

Note 2 Business developments

Acquisitions and divestitures

On May 10, 2010, Credit Suisse announced that it entered into an agreement to purchase from Fortis Bank Nederland its prime fund solutions business, a global leader in hedge fund

administration services. This transaction is expected to close in 4Q10.

For further information on divestitures, refer to Note 3 – Discontinued operations.

Note 3 Discontinued operations

On December 31, 2008 the Group signed an agreement to sell part of its traditional investments business in Asset Management to Aberdeen Asset Management (Aberdeen). The transaction was completed with the final closing on July 1, 2009. In return for the sale of these businesses, the Group acquired 240 million shares in Aberdeen, resulting in a total interest of 23.9%, with subsequent ownership changes reflected in continuing operations. Prior to this transaction, Aberdeen was an unrelated party to the Group. In 1Q10, Aberdeen issued shares resulting in a reduction of our ownership percentage to 21.7%. As part of the sale of the traditional investments business, we purchased certain assets in the amount of CHF 0.1 billion in 1Q10 in accordance with

contractual obligations and recognized unrealized losses of CHF 19 million included in discontinued operations.

The results of operations of the business sold have been reflected in income from discontinued operations in the consolidated statements of operations for all periods presented. The assets and liabilities of the business sold have been presented as assets of discontinued operations held-for-sale and liabilities of discontinued operations held-for-sale, respectively, in the consolidated balance sheet beginning in 4Q08. Assets and liabilities are reclassified as held-for-sale in the period in which the disposal determination is made, and prior periods are not reclassified.

Note 4 **Segment reporting**

Overview

The Group is a global financial services company domiciled in Switzerland. The Group's business consists of three segments: Private Banking, Investment Banking and Asset Management. The three segments are complemented by Shared Services, which provides support in the areas of finance, operations, including human resources, legal and compliance, risk management and information technology. The segment information reflects the Group's reportable segments as follows:

- Private Banking offers comprehensive advice and a broad range of wealth management solutions, including pension planning, life insurance products, tax planning and wealth and inheritance advice, which are tailored to the needs of high-net-worth and ultra-high-net-worth individuals worldwide. In Switzerland, it supplies banking products and services to individual clients, including affluent, high-net-worth and ultra-high-net-worth clients, and corporates and institutions.
- Investment Banking offers investment banking and securities products and services to corporate, institutional and government clients around the world. Its products and services include debt and equity underwriting, sales and trading, mergers and acquisitions advice, divestitures, corporate sales, restructuring and investment research.
- Asset Management offers integrated investment solutions and services to institutions, governments and private clients. It provides access to a wide range of investment classes, building on its global strengths in alternative investments and traditional investment strategies.

Corporate Center includes parent company operations such as Group financing, expenses for projects sponsored by the Group and certain expenses and revenues that have not been allocated to the segments. In addition, Corporate Center includes consolidation and elimination adjustments required to eliminate intercompany revenues and expenses.

Noncontrolling interest-related revenues and expenses resulting from the consolidation of certain private equity funds and other entities in which the Group does not have a significant economic interest in such revenues and expenses are reported as noncontrolling interests without significant economic interest. The consolidation of these entities does not affect net income attributable to shareholders as the amounts recorded in net revenues and total operating expenses are offset by corresponding amounts reported as noncontrolling interests. In addition, our tax expense is not affected by these revenues and expenses.

Revenue sharing and cost allocation

Responsibility for each product is allocated to a segment, which records all related revenues and expenses. Revenue-sharing and service level agreements govern the compensation received by one segment for generating revenue or providing services on behalf of another. These agreements are negotiated periodically by the relevant segments on a product-by-product basis.

The aim of revenue-sharing and cost allocation agreements is to reflect the pricing structure of unrelated third-party transactions.

Corporate services and business support in finance, operations, including human resources, legal and compliance, risk management and information technology are provided by the Shared Services area. Shared Services costs are allocated to the segments and Corporate Center based on their requirements and other relevant measures.

Funding

Credit Suisse centrally manages its funding activities. New securities for funding and capital purposes are issued primarily by Credit Suisse AG, the Swiss bank subsidiary of the Group (the Bank). The Bank lends funds to its operating subsidiaries and affiliates on both a senior and subordinated basis, as needed, the latter typically to meet capital requirements, or as desired by management to capitalize on opportunities. Capital is distributed to the segments considering factors such as regulatory capital requirements, utilized economic capital and the historic and future potential return on capital.

Transfer pricing, using market rates, is used to record interest income and expense in each of the segments for this capital and funding. The Group's funds transfer pricing system is designed to allocate to its businesses funding costs in a way that incentivizes their efficient use of funding. The Group's funds transfer pricing system is an essential tool that allocates to the businesses the short-term and long-term costs of funding their balance sheet and the costs associated with funding liquidity and balance sheet items, such as goodwill, which are beyond the control of individual businesses. This is of greater importance in a stressed capital markets environment where raising funds is more challenging and expensive. Under this system, the Group's businesses are also credited to the extent they provide long-term stable funding.

Taxes

The Group's segments are managed and reported on a pre-tax basis.

Trading revenues	3,628	3,452	3,217	5	13	7,080	8,114	(13)

Represents revenues on a product basis which are not representative of business results within segments as business results utilize financial instruments across various product types.

Trading revenues includes revenues from trading financial assets and liabilities as follows:

- Equities;
- Commodities;
- Listed and over-the-counter (OTC) derivatives;
- Derivatives linked to funds of hedge funds and providing financing facilities to funds of hedge funds;
- Market making in the government bond and associated OTC derivative swap markets;
- Domestic, corporate and sovereign debt, convertible and non-convertible preferred stock and short-term securities such as floating rate notes and commercial paper (CP);
- Market making and positioning in foreign exchange products;
- Credit derivatives on investment grade and high yield credits;
- Trading and securitizing all forms of securities that are based on underlying pools of assets; and
- Life settlement contracts.

Trading revenues also includes changes in the fair value of financial assets and liabilities elected to fair value under US GAAP. The main components include certain instruments from the following categories:

- Central bank funds purchased/sold;
- Securities purchased/sold under resale/repurchase agreements;
- Securities borrowing/lending transactions;

- Loans and loan commitments; and
- Customer deposits, short-term borrowings and long-term debt.

Managing the risks

As a result of the Group's broad involvement in financial products and markets, its trading strategies are correspondingly diverse and exposures are generally spread across a diversified range of risk factors and locations. The Group uses an economic capital limit structure to limit overall risk taking. The level of risk incurred by its divisions is further restricted by a variety of specific limits, including consolidated controls over trading exposures. Also, as part of its overall risk management, the Group holds a portfolio of economic hedges. Hedges are impacted by market movements, similar to trading securities, and may result in gains or losses on the hedges which offset losses or gains on the portfolios they were designed to economically hedge. The Group manages its trading risk with regard to both market and credit risk. For market risk, it uses tools capable of calculating comparable exposures across its many activities, as well as focused tools that can specifically model unique characteristics of certain instruments or portfolios.

The principal measurement methodology for trading assets, as well as most instruments for which the fair value option was elected, is value-at-risk. The Group holds securities as collateral and enters into credit default swaps (CDS) to mitigate the credit risk on these products.

Management determined that the unrealized losses on debt securities are primarily attributable to general market interest rate, credit spread or exchange rate movements. No significant impairment charges were recorded as the Group does not

intend to sell the investments, nor is it more likely than not that the Group will be required to sell the investments before the recovery of their amortized cost bases, which may be maturity.

Note 19 **Tax****Effective tax rate**

in	2Q10	1Q10
Effective tax rate (%)		
Effective tax rate	9.8	28.2

The lower effective tax rate was mainly due to a CHF 522 million benefit of a legal entity merger, offset in part by the non-

tax deductibility of the UK levy on variable compensation in 2Q10.

Net deferred tax assets

end of	2Q10	1Q10	Change
Net deferred tax assets (CHF million)			
Net operating losses	6,657	6,214	443
Temporary differences	3,561	3,818	(257)
Net deferred tax assets	10,218	10,032	186

The increase in net deferred tax assets primarily related to the legal entity merger and foreign exchange translation gains of CHF 263 million. Excluding these effects, net deferred tax assets decreased CHF 411 million, primarily as a result of temporary differences and taxable income in 2Q10.

The Group is currently subject to ongoing tax audits and inquiries with the tax authorities in a number of jurisdictions, including the US, the UK and Switzerland. Although the timing of the completion of these audits is uncertain, it is reasonably

possible that some of these audits and inquiries will be resolved within 12 months of the reporting date. It is reasonably possible that there will be a decrease between zero and CHF 276 million in unrecognized tax benefits within 12 months of the reporting date.

The Group remains open to examination from federal, state, provincial or similar local jurisdictions from the following years onward in these major countries: Switzerland – 2007; Japan – 2005; the US – 1999; and the UK – 1999.

Note 20 **Employee share-based compensation and other compensation benefits**

Payment of share-based compensation and other compensation benefits is determined by the nature of the business, role, location and performance of the employee. Unless there is a contractual obligation, granting share-based compensation and other compensation benefits is solely at the discretion of senior management. For further information on share-based compensation plans and the related fair value assumptions, refer to Note 26 – Employee share-based compensation and other compensation benefits in V – Consolidated financial statements – Credit Suisse Group in the Credit Suisse Annual Report 2009.

The Group generally repurchases its own shares (Credit Suisse Group shares (shares)) in the open market to satisfy

obligations in connection with share-based compensation, but it can also issue new shares out of available conditional capital.

Share-based compensation

Incentive Share Unit

Incentive Share Units (ISUs) have been the main form of share-based deferred variable compensation for all employees since 2006. Starting in 2009, ISUs were used for the deferred variable compensation awards for employees up to and including vice presidents. An ISU is similar to a share, but offers additional upside depending on the development of the Group share price.

of which unvested	35.7	60.3

Scaled Incentive Share Unit

The Scaled Incentive Share Unit (SISU) plan is a new share-based long-term incentive plan for managing directors and directors. SISUs were granted for the first time in January 2010 as part of 2009 variable compensation and comprised 50% of the deferred variable compensation awarded to man-

aging directors and directors for 2009. SISUs are similar to ISUs except with four-year vesting, subject to early retirement rules, and the leverage component contains an additional performance condition which could increase or decrease the number of any additional shares.

Balance at beginning of period	0.0
Granted	21.1
Forfeited	(0.1)
Balance at end of period	21.0
of which vested	0.0
of which unvested	21.0

Adjustable Performance Plan awards

The Adjustable Performance Plan (APP) is a new cash-based plan for managing directors and directors. APP awards were granted for the first time in January 2010 as part of 2009 variable compensation and comprised 50% of the deferred variable compensation awarded to managing directors and directors. These awards are subject to a three-year, pro-rata vesting schedule, subject to early retirement rules, and the final value of the APP awards paid out to individual employees may be adjusted positively or negatively from the initial amount awarded on the grant date, and the value paid out each year for vested awards will reflect these adjustments.

respectively. PIP units are long-term retention incentive awards requiring continued employment with the Group, subject to restrictive covenants and cancellation provisions, and vest evenly over a five-year period. Each PIP unit will settle for a specified number of Group shares subsequent to the fifth anniversary of the grant date based on the achievement of: i) earnings performance as compared to predefined targets (performance conditions); and ii) Group share price performance compared to predefined targets and relative to peers (market conditions). At grant, PIP II units were equivalent to a Group share price of CHF 72.00.

On March 31, 2010, we announced the determination of the number of Group shares for holders of PIP I units that were granted in early 2005, which were a part of 2004 compensation. In accordance with the terms of the plan, each outstanding PIP I unit entitled the holder to approximately 4.8 Group shares. PIP I awards were settled on April 20, 2010.

Performance Incentive Plan

As part of its annual variable compensation process for 2004 and 2005, the Group granted performance incentive plan share units (PIP units) during 2005 (PIP I) and 2006 (PIP II),

Share awards

The Group's share-based compensation as part of the yearly discretionary variable compensation in prior years included four different types of share awards: phantom shares, blocked shares, longevity premium awards (LPA) and special awards. These share awards entitle the holder to receive one Group share subject to continued employment with the Group,

restrictive covenants and cancellation provisions, and generally vest between zero and five years. In 2006, the Group introduced the ISU share-based plan to replace phantom shares, blocked shares and LPA awards granted in prior years.

Special awards are generally shares, which may be granted to new employees. These special awards may contain vesting conditions, depending on the terms of employment.

Share options

Options were a substantial component of the Group's share-based program prior to 2004. The Group discontinued the practice of issuing options and the majority of the original grants have since vested. Share options were granted with an exercise price equal to the market price of Group's shares on the date of grant and expire after ten years.

Other compensation benefits

Partner Asset Facility

As part of the 2008 annual compensation process, the Group granted employees in Investment Banking with a corporate title of managing director or director the majority of the deferred portion of their variable compensation in the form of Partner Asset Facility (PAF) awards. The PAF units are indexed to, and represent a first-loss interest in, a specified pool of illiquid assets that originated in Investment Banking.

On January 21, 2009, the Group granted PAF awards to employees with a total notional value of CHF 686 million. The contractual term of the PAF award is eight years. 66.7% of the PAF awards were fully vested upon grant and attributed to services performed in 2008 and 33.3% of the PAF awards vested over the first three months of 2009.

Cash Retention Awards

For 2008, managing directors across all divisions, all directors in Investment Banking and, to the extent the cash component of variable compensation exceeded CHF 300,000, directors in Private Banking, Asset Management and Shared Services received deferred variable compensation in the form of Cash Retention Awards (CRA). These CRA payments, which were made in 1Q09, are subject to vesting ratably over a two-year period and other conditions and any unvested CRA will have to be repaid if a claw-back event, such as voluntary termination of employment, occurs.

Note 21 **Pension and other post-retirement benefits**

The Group previously disclosed that it expected to contribute CHF 488 million to the Swiss and international defined benefit pension plans and other post-retirement defined benefit

plans in 2010. As of the end of 2Q10, CHF 294 million of contributions have been made.

Note 22 Derivatives and hedging activities

Derivatives are generally either privately negotiated OTC contracts or standard contracts transacted through regulated exchanges. The Group's most frequently used freestanding derivative products, entered into for trading and risk management purposes, include interest rate, cross-currency and credit default swaps, interest rate and foreign exchange options, foreign exchange forward contracts and foreign exchange and interest rate futures.

The Group also enters into contracts that are not considered derivatives in their entirety but include embedded derivative features. Such transactions primarily include issued and purchased structured debt instruments where the return may be calculated by reference to an equity security, index or third-party credit risk, or that have non-standard interest or foreign exchange terms.

On the date a derivative contract is entered into, the Group designates it as belonging to one of the following categories:

- trading activities;
 - a risk management transaction that does not qualify as a hedge under accounting standards (referred to as an economic hedge);
 - a hedge of the fair value of a recognized asset or liability;
 - a hedge of the variability of cash flows to be received or paid relating to a recognized asset or liability or a forecasted transaction; or
 - a hedge of a net investment in a foreign operation.
- foreign exchange derivatives to manage foreign exchange risk on certain core banking business revenue and expense items, as well as on core banking business assets and liabilities;
 - credit derivatives to manage credit risk on certain loan portfolios; and
 - futures to manage risk on equity positions including convertible bonds.

Derivatives used in economic hedges are included as trading assets or trading liabilities in the consolidated balance sheets.

Hedge accounting

Fair value hedges

The Group designates fair value hedges as part of an overall interest rate risk management strategy that incorporates the use of derivative instruments to minimize fluctuations in earnings that are caused by interest rate volatility. In addition to hedging changes in fair value due to interest rate risk associated with fixed rate loans, repurchase agreements and long-term debt instruments, the Group uses:

- cross-currency swaps to convert foreign-currency-denominated fixed rate assets or liabilities to floating rate functional currency assets or liabilities; and
- foreign exchange forward contracts to hedge the foreign exchange risk associated with available-for-sale securities.

Trading activities

The Group is active in most of the principal trading markets and transacts in many popular trading and hedging products. As noted above, this includes the use of swaps, futures, options and structured products, such as custom transactions using combinations of derivatives, in connection with its sales and trading activities. Trading activities include market making, positioning and arbitrage activities. The majority of the Group's derivatives held as of the end of 2Q10 were used for trading activities.

Economic hedges

Economic hedges arise when the Group enters into derivative contracts for its own risk management purposes, but the contracts entered into do not qualify for hedge accounting under US GAAP. These economic hedges include the following types:

- interest rate derivatives to manage net interest rate risk on certain core banking business assets and liabilities;

Cash flow hedges

The Group designates cash flow hedges as part of its strategy to mitigate its risk to variability of cash flows on loans, deposits and other debt obligations by using interest rate swaps to convert variable rate assets or liabilities to fixed rates. The Group also uses cross-currency swaps to convert foreign-currency-denominated fixed and floating rate assets or liabilities to fixed rate assets or liabilities based on the currency profile that the Group elects to be exposed to. This includes, but is not limited to, Swiss francs and US dollars. Further, the Group uses derivatives to hedge its cash flows associated with forecasted transactions. As of the end of 2Q10, the maximum length of time over which the Group hedged its exposure to the variability in future cash flows for forecasted transactions, excluding those forecasted transactions related to the payment of variable interest on existing financial instruments, was 11 months.

Net investment hedges

The Group designates net investment hedges as part of its strategy to hedge selected net investments in foreign operations against adverse movements in foreign exchange rates, typically using foreign exchange forward contracts.

Hedge effectiveness assessment

The Group assesses the effectiveness of hedging relationships both prospectively and retrospectively. The prospective assessment is made both at the inception of a hedging rela-

tionship and on an ongoing basis, and requires the Group to justify its expectation that the relationship will be highly effective over future periods. The retrospective assessment is also performed on an ongoing basis and requires the Group to determine whether or not the hedging relationship has actually been effective. If the Group concludes, through a retrospective evaluation, that hedge accounting is appropriate for the current period, then it measures the amount of hedge ineffectiveness to be recognized in earnings.

Fair value of derivative instruments

The table below presents gross derivative replacement values by type of contract and balance sheet location and whether the derivative is used for trading purposes or in a qualifying hedging relationship. Notional amounts have also been provided as an indication of the volume of derivative activity within the Group.

Information on bifurcated embedded derivatives has not been included in this table. Under US GAAP, the Group elected to account for substantially all financial instruments with an embedded derivative that is not considered clearly and closely related to the host contract at fair value.

The Group includes all derivative instruments not included in hedge accounting relationships in its trading activities. Instead of separately disclosing gains and losses of these derivative instruments by type of contracts, the Group elected to provide alternative disclosures as offered under US GAAP. For these alternative disclosures, refer to Note 7 – Trading revenues.

Disclosures relating to contingent credit risk

Certain of the Group's derivative instruments contain provisions that require it to maintain a specified credit rating from each of the major credit rating agencies. If the ratings fall below that specified in the contract, the counterparties to the agreements could request payment of additional collateral on those derivative instruments that are in a net liability position. Certain of the derivative contracts also provide for termination of the contract, generally upon a downgrade of either the Group or the counterparty, at the existing mark-to-market of the derivative contract.

The following table provides the Group's current net exposure from contingent credit risk relating to derivative contracts with bilateral counterparties and special purpose entities (SPEs) that include credit support agreements, the related collateral posted and the additional collateral required in a one-notch and in a two-notch downgrade event, respectively. The table also includes derivative contracts with contingent credit risk features without credit support agreements that have accelerated termination event conditions. The current net exposure for derivative contracts with bilateral counterparties and contracts with accelerated termination event conditions is the aggregate fair value of derivative instruments that were in a net liability position. For SPEs, the current net exposure by contract may include amounts other than or in addition to the negative replacement value of derivative instruments with credit-risk-related contingent features.

Contingent credit risk

end of	Bilateral counterparties	Special purpose entities	Accelerated terminations	Total

Credit derivatives

Credit derivatives are contractual agreements in which the buyer generally pays a fee in exchange for a contingent payment by the seller if there is a credit event on the underlying referenced entity or asset. Credit derivatives are generally privately negotiated OTC contracts. Most credit derivatives are structured so that they specify the occurrence of an identifiable credit event, which can include bankruptcy, insolvency, receivership, material adverse restructuring of debt or failure to meet obligations when due.

The credit derivatives most commonly transacted by the Group are CDS and credit swaptions. A CDS is a contractual agreement in which the buyer of the swap pays an upfront and/or a periodic fee in return for a contingent payment by the seller of the swap following a credit event of the referenced entity or asset. Credit swaptions are options with a specified maturity to buy or sell protection under a CDS on a specific referenced credit event. Credit derivatives include hybrid instruments such as credit-linked notes (CLN). A CLN is a note whereby the investor in the note sells credit protection of the same amount on a referenced entity to the issuer of the instrument. In a CLN, neither investor nor issuer has recourse to the defaulting reference entity.

The Group enters into credit derivative contracts in the normal course of business, buying and selling protection to facilitate client transactions and as a market maker. This includes providing structured credit products for its clients to enable them to hedge their credit risk. The referenced instruments of these structured credit products are both investment grade and high yield underlyings and could include corporate bonds, sovereign debt, ABS and loans. These referenced instruments can form a single item or be combined on a portfolio basis. The Group purchases protection to economically hedge vari-

ous forms of credit exposure, for example, the economic hedging of loan portfolios or other cash positions. Finally, the Group also takes proprietary positions which can take the form of either purchased or sold protection.

The following tables reflect the maximum potential amount of future payments that the Group would be required to make under the credit derivatives as a result of credit-risk-related events for which it has sold protection. The segregation of the future payments by maturity range and underlying risk gives an indication of the current status of the potential for performance under the derivative contracts. The fair values of the derivatives also give an indication of the amount of payment risk, as the negative fair values increase when the potential payment under the derivative contracts becomes more probable. To reflect the quality of the payment risk on credit protection sold, the Group assigns an internally generated rating to those instruments referenced in the contracts. Internal ratings are assigned by experienced credit analysts based on expert judgment that incorporates analysis and evaluation of both quantitative and qualitative factors. The specific factors analyzed, and their relative importance, are dependent on the type of counterparty. The analysis emphasizes a forward-looking approach, concentrating on economic trends and financial fundamentals, and making use of peer analysis, industry comparisons and other quantitative tools. External ratings and market information are also used in the analysis process where available.

The tables also include the estimated recoveries that would be received if the specified credit event occurred, including the anticipated value of the underlying referenced asset that would, in most instances, be transferred to the Group and the impact of any purchased protection with an identical reference instrument and product type. In the normal course of business,

the Group also purchases protection to offset the risk of sold protection that may have similar, but not identical, reference instruments, and may use similar, but not identical, products. The impacts of these transactions have not been included in the estimate of recoveries. In addition, to reduce its credit risk,

the Group enters into legally enforceable netting agreements with its derivative counterparties. Collateral on these derivative contracts is usually posted on a net counterparty basis and cannot be allocated to a particular derivative contract, and, therefore, has not been included in the estimate of recoveries.

Credit derivative maximum potential payout by maturity

end of	Maturity less than 1 year	Maturity between 1 to 5 years	Maturity greater than 5 years	Total
2Q10 (CHF million)

of which sovereigns	16,225	(555)	15,199	347	(58)	111
of which non-sovereigns	333,606	(14,106)	313,137	350,112	(8,719)	341,716

¹ Based on internal ratings of BBB and above.

The above maximum potential payout relates only to sold protection. The Group also purchases protection, which reduces total credit derivative exposure.

The following table provides the Group's percentage allocation of purchased credit protection by counterparty.

Credit protection purchased by counterparty

end of	2Q10	4Q09
Credit protection purchased by counterparty (in %)		
Banks and broker-dealers ¹	93	93
Other financial institutions ²	6	6
Other counterparties	1	1
Total	100	100

¹ Includes clearing houses. ² Primarily hedge funds.

The tables "Credit derivative maximum potential payout by maturity" and "Credit derivative exposure on sold protection" do not include all credit derivatives and differ from the balance for credit derivatives in the fair value of derivative instruments table. This is due to the exclusion of certain credit derivative instruments under US GAAP, which defines a credit derivative as a derivative instrument (a) in which one or more of its underlyings are related to the credit risk of a specified entity (or a group of entities) or an index based on the credit risk of a group of entities and (b) that exposes the seller to potential loss from credit-risk-related events specified in the contract.

Total return swaps (TRS) are excluded because a TRS does not expose the seller to potential loss from credit-risk-related events specified in the contract. A TRS only provides protection against a loss in asset value, and not against additional amounts as a result of specific credit events. Collateralized debt obligations (CDOs) are also excluded because the derivative embedded in a CDO does not require bifurcation under US GAAP as it relates to the creditworthiness of the securitized financial assets and liabilities. As a result, they are not subject to this disclosure.

Note 23 **Guarantees and commitments****Guarantees**

In the ordinary course of business, guarantees are provided that contingently obligate Credit Suisse to make payments to third parties if the counterparty fails to fulfill its obligation under a borrowing or other contractual arrangement. The total

gross amount disclosed within the Guarantees table reflects the maximum potential payment under the guarantees. The carrying value represents the Group's current best estimate of payments that will be required under existing guarantee arrangements.

Guarantees

end of	Maturity less than 1 year	Maturity greater than 1 year	Total gross amount	Total net amount ¹	Carrying value	Collateral received

¹ Total net amount is computed as the gross amount less any participations. ² Collateral for derivatives accounted for as guarantees is not considered significant.

Credit guarantees and similar instruments

Credit guarantees and similar instruments are contracts that require the Group to make payments should a third party fail to do so under a specified existing credit obligation. The position includes standby letters of credit, commercial and residential mortgage guarantees and other guarantees associated with VIEs.

Standby letters of credit are made in connection with the corporate lending business and other corporate activities, where the Group provides guarantees to counterparties in the form of standby letters of credit, which represent obligations to make payments to third parties if the counterparties fail to fulfill their obligations under a borrowing arrangement or other contractual obligation.

Commercial and residential mortgage guarantees are made in connection with the Group's commercial mortgage activities in the US, where the Group sells certain commercial and residential mortgages to the Federal National Mortgage Association

(FNMA) and agrees to bear a percentage of the losses triggered by the borrowers failing to perform on the mortgage. The Group also issues guarantees that require it to reimburse the FNMA for losses on certain whole loans underlying mortgage-backed securities issued by the FNMA, which are triggered by borrowers failing to perform on the underlying mortgages.

The Group also provides guarantees to VIEs and other counterparties under which it may be required to buy assets from such entities upon the occurrence of certain triggering events such as rating downgrades and/or substantial decreases in fair value of those assets.

Performance guarantees and similar instruments

Performance guarantees and similar instruments are arrangements that require contingent payments to be made when certain performance-related targets or covenants are not met. Such covenants may include a customer's obligation to deliver

certain products and services or to perform under a construction contract. Performance guarantees are frequently executed as part of project finance transactions. The position includes private equity fund guarantees and guarantees related to residential mortgage securitization activities.

For private equity fund guarantees, the Group has provided investors in private equity funds sponsored by a Group entity guarantees on potential obligations of certain general partners to return amounts previously paid as carried interest to those general partners if the performance of the remaining investments declines. To manage its exposure, the Group generally withholds a portion of carried interest distributions to cover any repayment obligations. In addition, pursuant to certain contractual arrangements, the Group is obligated to make cash payments to certain investors in certain private equity funds if specified performance thresholds are not met.

Further, as part of the Group's residential mortgage securitization activities in the US, the Group may guarantee the collection by the servicer and remittance to the securitization trust of prepayment penalties. The Group will have to perform under these guarantees in the event the servicer fails to remit the prepayment penalties.

Securities lending indemnifications

Securities lending indemnifications include arrangements in which the Group agreed to indemnify securities lending customers against losses incurred in the event that security borrowers do not return securities subject to the lending agreement and the collateral held is insufficient to cover the market value of the securities borrowed. As indicated in the Guarantees table, the Group was fully collateralized in respect of securities lending indemnifications.

Derivatives

Derivatives are issued in the ordinary course of business, generally in the form of written put options. Derivative contracts that may be cash settled, and for which the Group has no basis for concluding that it is probable that the counterparties held the underlying instruments at the inception of the contracts, are not considered guarantees under US GAAP. For derivative contracts executed with counterparties that generally act as financial intermediaries, such as investment banks, hedge funds and security dealers, the Group has concluded that there is no basis to assume that these counterparties hold the underlying instruments related to the derivative contracts and, therefore, does not report such contracts as guarantees.

The Group manages its exposure to these derivatives by engaging in various hedging strategies to reduce its exposure. For some contracts, such as written interest rate caps or for-

eign exchange options, the maximum payout is not determinable as interest rates or exchange rates could theoretically rise without limit. For these contracts, notional amounts were disclosed in the table above in order to provide an indication of the underlying exposure. In addition, the Group carries all derivatives at fair value in the consolidated balance sheets and has considered the performance triggers and probabilities of payment when determining those fair values. It is more likely than not that written put options that are in-the-money to the counterparty will be exercised, for which the Group's exposure was limited to the fair value reflected in the table.

Other guarantees

Other guarantees include bankers' acceptances, residual value guarantees, deposit insurance, contingent considerations in business combinations, the minimum value of an investment in mutual funds or private equity funds and all other guarantees that were not allocated to one of the categories above.

Deposit-taking banks in Switzerland and certain other European countries are required to ensure the payout of privileged deposits in case of specified restrictions or compulsory liquidation of a deposit-taking bank. Upon occurrence of a payout event triggered by a specified restriction of business imposed by the Swiss Financial Markets Supervisory Authority (FINMA) or by compulsory liquidation of another deposit taking bank, the Group's contribution will be calculated based on its share of privileged deposits in proportion to total privileged deposits. These deposit insurance guarantees were reflected in other guarantees.

Disposal-related contingencies and other indemnifications

The Group has certain guarantees for which its maximum contingent liability cannot be quantified. These guarantees are not reflected in the table above and are discussed below.

Disposal-related contingencies

In connection with the sale of assets or businesses, the Group sometimes provides the acquirer with certain indemnification provisions. These indemnification provisions vary by counterparty in scope and duration and depend upon the type of assets or businesses sold. They are designed to transfer the potential risk of certain unquantifiable and unknowable loss contingencies, such as litigation, tax and intellectual property matters, from the acquirer to the seller. The Group closely monitors all such contractual agreements in order to ensure that indemnification provisions are adequately provided for in the Group's consolidated financial statements.

Other indemnifications

The Group provides indemnifications to certain counterparties in connection with its normal operating activities, for which it is not possible to estimate the maximum amount that it could be obligated to pay. As a normal part of issuing its own securities, the Group typically agrees to reimburse holders for additional tax-withholding charges or assessments resulting from changes in applicable tax laws or the interpretation of those laws. Securities that include these agreements to pay additional amounts generally also include a related redemption or call provision if the obligation to pay the additional amounts results from a change in law or its interpretation and the obligation cannot be avoided by the issuer taking reasonable steps to avoid the payment of additional amounts. Since such

potential obligations are dependent on future changes in tax laws, the related liabilities the Group may incur as a result of such changes cannot be reasonably estimated. In light of the related call provisions typically included, the Group does not expect any potential liabilities in respect of tax gross-ups to be material.

The Group is a member of numerous securities exchanges and clearing houses and may, as a result of its membership arrangements, be required to perform if another member defaults. The Group has determined that it is not possible to estimate the maximum amount of these obligations and believes that any potential requirement to make payments under these arrangements is remote.

Other commitments

end of	Maturity less than 1 year	Maturity greater than 1 year	Total gross amount	Total net amount ¹	Collateral received

Other commitments	6,377	2,588	8,965	8,965	6
Total other commitments	230,057	55,456	285,513	278,757	204,873

¹ Total net amount is computed as the gross amount less any participations.

Irrevocable commitments under documentary credits

Irrevocable commitments under documentary credits include exposures from trade finance related to commercial letters of credit under which the Group guarantees payments to exporters against presentation of shipping and other documents.

Loan commitments

Loan commitments include unused credit facilities that can be revoked at our sole discretion upon notice to the client. A small portion of total loan commitments is related to the leveraged finance business. Commitments to originate mortgage loans that will be held for sale are considered derivatives for accounting purposes and are not included in this disclosure.

Such commitments are reflected as derivatives in the consolidated balance sheets.

Forward reverse repurchase agreements

Forward reverse repurchase agreements represent transactions in which the initial cash exchange of the reverse repurchase transactions takes place on specified future dates.

Other commitments

Other commitments include private equity commitments, firm commitments in underwriting securities, commitments arising from deferred payment letters of credit and from acceptances in circulation and liabilities for calls on shares and other equity instruments.

Note 24 **Transfers of financial assets and variable interest entities**

In the normal course of business, the Group enters into transactions with, and makes use of, SPEs. An SPE is an entity in the form of a trust or other legal structure designed to fulfill a specific limited need of the company that organized it and are generally structured to isolate the SPE's assets from creditors of other entities, including the Group. The principal uses of SPEs are to assist the Group and its clients in securitizing financial assets and creating investment products. The Group also uses SPEs for other client-driven activity, such as to facilitate financings, and Group tax or regulatory purposes.

Transfers of financial assets

Securitizations

The majority of the Group's securitization activities involve mortgages and mortgage-related securities and are predominantly transacted using SPEs. In a typical securitization, the SPE purchases assets financed by proceeds received from the SPE's issuance of debt and equity instruments, certificates, commercial paper and other notes of indebtedness. These assets and liabilities are recorded on the balance sheet of the SPE and not reflected on Group's consolidated balance sheet, unless either the Group sold the assets to the entity and the accounting requirements for sale were not met or the Group consolidates the SPE.

The Group purchases commercial and residential mortgages for the purpose of securitization and sells these mortgage loans to SPEs. These SPEs issue CMBS, RMBS and ABS that are collateralized by the assets transferred to the SPE and that pay a return based on the returns on those assets. Investors in these mortgage-backed securities or ABS typically have recourse to the assets in the SPEs, unless a third-party guarantee has been received to further enhance the creditworthiness of the assets. The investors and the SPEs have no recourse to the Group's assets. The Group is

typically an underwriter of, and makes a market in, these securities.

The Group also transacts in re-securitizations of previously issued RMBS securities. Typically, certificates issued out of an existing securitization vehicle are sold into a newly created and separate securitization vehicle. Often, these re-securitizations are initiated in order to repackage an existing security to give the investor a higher rated tranche.

The Group also purchases loans and other debt obligations from clients, which are then sold by the Group directly or indirectly to SPEs that issue CDOs. The Group structures, underwrites and makes a market in these CDOs. CDOs are collateralized by the assets transferred to the CDO vehicle and pay a return based on the returns on those assets. Investors typically only have recourse to the collateral of the CDO and do not have recourse to the Group's assets.

When the Group transfers assets into an SPE, it must assess whether that transfer is accounted for as a sale of the assets. Transfers of assets may not meet sale requirements if the assets have not been legally isolated from the Group and/or if the Group's continuing involvement is deemed to give it effective control over the assets. If the transfer is not deemed a sale, it is instead accounted for as a secured borrowing, with the transferred assets as collateral.

As a result of the issuance of new guidance effective January 1, 2010, the Group lost sale accounting treatment for certain asset transfers and for certain transfers of portions of assets that do not meet the definition of participating interests. The impact of this change in accounting guidance did not have a significant impact.

Gains and losses on securitization transactions depend, in part, on the carrying values of mortgages and CDOs involved in the transfer and are allocated between the assets sold and any beneficial interests retained according to the relative fair values at the date of sale.

The following table provides the gains or losses and proceeds from the transfer of assets relating to 6M10 and 6M09 securitizations of financial assets that qualify for sale accounting and subsequent derecognition, along with the cash flows

between the Group and the SPEs used in any securitizations in which the Group still has continuing involvement as of the end of 6M10 and 6M09, regardless of when the securitization occurred.

Securitizations

in	6M10	6M09 ¹
Gains and cash flows (CHF million)

Proceeds from transfer of assets	19,373	14,418
Servicing fees	3	2
Cash received on interests that continue to be held	225	108
ABS ³		
Cash received on interests that continue to be held	4	14
CDO		
Net gain/(loss) ²	(6)	6
Proceeds from transfer of assets	2,284	334
Purchases of previously transferred financial assets or its underlying collateral	(1,258)	(973)
Cash received on interests that continue to be held	112	155

¹ Amounts were previously presented separately as qualified special purpose entities (QSPEs) and SPEs. The change in the presentation was a result of new guidance. ² Includes underwriting revenues, deferred origination fees, gains or losses on the sale of collateral to the SPE and gains or losses on the sale of newly issued securities to third parties, but excludes net interest income on assets prior to the securitization. The gains or losses on the sale of the collateral is the difference between the fair value on the day prior to the securitization pricing date and the sale price of the loans. ³ Primarily home equity loans.

Other asset-based financing arrangements

The Group also uses SPEs for other client-driven activity and for Group tax or regulatory purposes. These activities include various leveraged finance, repack and other types of structures.

Leveraged finance structures are used to assist in the syndication of certain loans held by the Group. Typically, a third-party private equity sponsor will establish a SPE which in turn will purchase a loan from the Group. The debt (loan facility) provided by the Group has recourse only to the assets held within the SPE.

Repack structures are designed to give a client collateralized exposure to specific cash flows or credit risk. Typically, the SPE structure will issue notes to the client, enter into a derivative through which the desired exposure is introduced and then collateral will be purchased from the Group.

Other types of structures in this category include life insurance structures, emerging market structures set up for financing, loan participation or loan origination purposes and other alternative structures created for the purpose of investing in venture capital-like investments.

The following table provides the gains or losses and proceeds from the transfer of assets relating to 6M10 and 6M09 transfers (which were not securitizations) treated as sales, along with the cash flows between the Group and the SPEs

used in such transfers in which the Group had continuing involvement as of the end of 6M10 and 6M09, regardless of when the transfer of assets occurred.

Other asset-backed financing activities

in	6M10	6M09
Gains and cash flows (CHF million)		
Net gain ¹	17	8
Proceeds from transfer of assets ²	260	213
Purchases of previously transferred financial assets or its underlying collateral	(527)	(9)
Cash received on interests that continue to be held	712	514

¹ Includes underwriting revenues, deferred origination fees, gains or losses on the sale of collateral to the SPE and gains or losses on the sale of newly issued securities to third parties, but excludes net interest income on assets prior to the other asset-backed financing activity. The gains or losses on the sale of the collateral is the difference between the fair value on the day prior to the other asset-backed financing activity pricing date and the sale price of the loans. ² Primarily home equity loans.

The Group does not retain material servicing responsibilities from securitizations or other asset-backed financing activities.

Continuing involvement in transferred financial assets

The Group may have continuing involvement in the financial assets that are transferred to an SPE, regardless of whether the transfer was accounted for as a sale or a secured borrowing, which may take several forms, including, but not limited to, servicing, recourse and guarantee arrangements, agreements to purchase or redeem transferred assets, derivative instruments, pledges of collateral and beneficial interests in the transferred assets. Beneficial interests, which are valued at fair value, include rights to receive all or portions of specified cash inflows received by an SPE, including, but not limited to, senior and subordinated shares of interest, principal, or other cash inflows to be "passed through" or "paid through," premiums due to guarantors, CP obligations, and residual interests, whether in the form of debt or equity.

The Group's exposure resulting from continuing involvement in transferred financial assets is generally limited to ben-

eficial interests typically held by the Group in the form of instruments issued by SPEs that are senior, subordinated or residual tranches. These instruments are held by the Group typically in connection with underwriting or market-making activities and are included in trading assets in the consolidated balance sheets. Any changes in the fair value of these beneficial interests are recognized in the consolidated statements of operations.

Investors usually have recourse to the assets in the SPE and often benefit from other credit enhancements, such as collateral accounts, or from liquidity facilities, such as lines of credit or liquidity put option of asset purchase agreements. The SPE may also enter into a derivative contract in order to convert the yield or currency of the underlying assets to match the needs of the SPE investors, or to limit or change the credit risk of the SPE. The Group may be the provider of certain credit enhancements as well as the counterparty to any related derivative contact.

The following table provides the outstanding principal balance of assets to which the Group continued to be exposed after the transfer of the financial assets to any SPE and the

total assets of the SPE as of the end of 2Q10 and 4Q09, regardless of when the transfer of assets occurred.

Principal amounts outstanding and total assets of SPEs resulting from continuing involvement

end of	2Q10	4Q09 ¹

Total assets of SPE	4,943	7,244
CDO		
Principal amount outstanding	36,296 ²	37,474 ²
Total assets of SPE	36,351	37,952
Other asset-backed financing activities		
Principal amount outstanding	10,840	12,261 ²
Total assets of SPE	10,840	13,862

¹ Amounts were previously presented separately as QSPEs and SPEs. The change in the presentation was a result of new guidance. ² Principal amount outstanding relates to assets transferred from the Group and does not include principle amounts for assets transferred from third parties.

Fair value of beneficial interests

The fair value measurement of the beneficial interests held at the time of transfer and as of the reporting date that result from any continuing involvement are determined using fair value estimation techniques, such as the present value of estimated future cash flows that incorporate assumptions that

market participants customarily use in these valuation techniques. The fair value of the assets or liabilities that result from any continuing involvement does not include any benefits from financial instruments that the Group may utilize to hedge the inherent risks.

Key economic assumptions at the time of transfer

In January 2010, the FASB amended the disclosure requirements for the Group's reporting of the fair value of beneficial interests retained at the time of transfer. Further, the beneficial interests are categorized according to their fair value hier-

archy levels. As this requirement is not retroactive, comparable data is not presented for prior periods. For further information on fair value hierarchy, refer to Note 25 – Fair value of financial instruments – Fair value hierarchy.

Key economic assumptions used in measuring fair value of beneficial interests at time of transfer

at time of transfer	CMBS	RMBS
CHF million, except where indicated		
Fair value of beneficial interests	90	1,037
of which level 2	90	974
of which level 3	0	63
Weighted-average life, in years	6.4	10.2
Prepayment speed assumption (rate per annum), in % ¹	–	0.3-43.7
Cash flow discount rate (rate per annum), in % ²	5.5-10.2	0.6-70.1
Expected credit losses (rate per annum), in %	3.2-8.0	0.0-71.5

Transfers of assets in which the Group does not have beneficial interests are not included in this table.

¹ Prepayment speed assumption (PSA) is an industry standard prepayment speed metric used for projecting prepayments over the life of a residential mortgage loan. PSA utilizes the constant prepayment rate (CPR) assumptions. A 100% prepayment assumption assumes a prepayment rate of 0.2% per annum of the outstanding principal balance of mortgage loans in the first month. This increases by 0.2% thereafter during the term of the mortgage loan, leveling off to a CPR of 6% per annum beginning in the 30th month and each month thereafter during the term of the mortgage loan. 100 PSA equals 6 CPR. ² The rate was based on the weighted-average yield on the beneficial interests.

Key economic assumptions as of the reporting date

The following tables provide the sensitivity analysis of key economic assumptions used in measuring the fair value of beneficial interests held in SPEs as of the end of 2Q10 and 4Q09.

¹ To deter prepayment, commercial mortgage loans typically have prepayment protection in the form of prepayment lockouts and yield maintenances. ² CDOs are generally structured to be protected from prepayment risk. ³ PSA is an industry standard prepayment speed metric used for projecting prepayments over the life of a residential mortgage loan. PSA utilizes the CPR assumptions. A 100% prepayment assumption assumes a prepayment rate of 0.2% per annum of the outstanding principal balance of mortgage loans in the first month. This increases by 0.2% thereafter during the term of the mortgage loan, leveling off to a CPR of 6% per annum beginning in the 30th month and each month thereafter during the term of the mortgage loan. 100 PSA equals 6 CPR. ⁴ The rate was based on the weighted-average yield on the beneficial interests.

These sensitivities are hypothetical and do not reflect economic hedging activities. Changes in fair value based on a 10% or 20% variation in assumptions generally cannot be extrapolated because the relationship of the change in assumption to the change in fair value may not be linear. Also, the effect of a variation in a particular assumption on the fair value of the beneficial interests is calculated without changing any other assumption. In practice, changes in one assumption may result in changes in other assumptions (for example, increases in market interest rates may result in lower prepay-

ments and increased credit losses), which might magnify or counteract the sensitivities.

Secured borrowings

The following table provides the carrying amounts of transferred financial assets and the related liabilities where sale treatment was not achieved as of the end of 2Q10 and 4Q09. For information on assets pledged or assigned, refer to Note 26 – Assets pledged or assigned.

Variable interest entities

As a normal part of its business, the Group engages in various transactions that include entities that are considered VIEs and are broadly grouped into three primary categories: CDOs, CP conduits and financial intermediation. VIEs are SPEs that typically either lack sufficient equity to finance their activities without additional subordinated financial support or are structured such that the holders of the voting rights do not substantively participate in the gains and losses of the entity. VIEs may be sponsored by the Group, unrelated third parties or clients. Such entities are required to be assessed for consolidation, compelling the primary beneficiary to consolidate the VIE. As a result of the issuance of new guidance, the FASB changed the method of analyzing whether to consolidate the

VIE. The model now requires an entity to determine whether it has the power to direct the activities that most significantly affect the economics of the VIE as well as whether the reporting entity has potentially significant benefits or losses in the VIE. This is in contrast to the previous consolidation model for VIEs, which only considered whether an entity absorbed the majority of the risk and/or rewards of the VIE. In addition, the primary beneficiary must be re-evaluated on an on-going basis, whereas previously reconsideration of the primary beneficiary was only required when specified reconsideration events occurred.

Consequently, the Group consolidated certain VIEs and former qualified SPEs with which it had involvement. The Group elected the fair value option upon transition for all of

the financial assets and liabilities of the VIEs and former qualified SPEs. For further information on the fair value option, refer to Note 25 – Fair value of financial instruments.

Application of the requirements for consolidation of VIEs may require the exercise of significant management judgment. In the event consolidation of a VIE is required, the exposure to the Group is limited to that portion of the VIE's assets attributable to any variable interest held by the Group prior to any risk management activities to hedge the Group's net exposure. Any interests held in the VIE by third parties, even though consolidated by the Group, will not typically impact its results of operations.

Transactions with VIEs are generally executed to facilitate securitization activities or to meet specific client needs, such as providing liquidity or investing opportunities, and, as part of these activities, the Group may hold interests in the VIEs. Securitization-related transactions with VIEs involve selling or purchasing assets as well as possibly entering into related derivatives with those VIEs, providing liquidity, credit or other support. Other transactions with VIEs include derivative transactions in the Group's capacity as the prime broker. The Group also enters into lending arrangements with VIEs for the purpose of financing projects or the acquisition of assets. Typically, the VIE's assets are restricted in nature in that they are held primarily to satisfy the obligations of the entity. Further, the Group is involved with VIEs which were formed for the purpose of offering alternative investment solutions to clients. Such VIEs relate primarily to private equity investments, fund-linked vehicles or funds of funds, where the Group acts as structurer, manager, distributor, broker, market maker or liquidity provider.

As a consequence of these activities, the Group holds variable interests in VIEs. Such variable interests consist of financial instruments issued by VIEs and which are held by the Group, certain derivatives with VIEs or loans to VIEs. Guarantees issued by the Group to or on behalf of VIEs may also qualify as variable interests. For such guarantees, including derivatives that act as guarantees, the notional amount of the respective guarantees are provided to represent the exposure. In general, investors in consolidated VIEs do not have recourse to the Group in the event of a default, except where a guarantee was provided to the investors or where the Group is the counterparty to a derivative transaction involving VIEs.

The amounts shown as total assets of consolidated and non-consolidated VIEs for which the Group has involvement represent the total assets of the VIEs even though the Group's involvement may be significantly less due to interests held by third-party investors. The asset balances for non-consolidated VIEs where the Group has significant involvement represent the most current information available to the Group regarding

the remaining principal balance of assets owned. In most cases, the asset balances represent an amortized cost basis without regards to impairments in fair value, unless fair value information is readily available.

The Group's maximum exposure to loss is different from the carrying value of the assets of the VIE. This maximum exposure to loss consists of the carrying value of the Group variable interests held as trading assets, derivatives and loans and the notional amount of guarantees to VIEs, rather than the amount of total assets of the VIEs. The maximum exposure to loss does not reflect the Group's risk management activities, including effects from financial instruments that the Group may utilize to economically hedge the risks inherent in these VIEs. The economic risks associated with VIE exposures held by the Group, together with all relevant risk mitigation initiatives, are included in the Group's risk management framework.

Except as described below, the Group has not provided financial or other support to consolidated or non-consolidated VIEs that it was not contractually required to provide.

Collateralized debt obligations

The Group engages in CDO transactions to meet client and investor needs, earn fees and sell financial assets. The Group may act as underwriter, placement agent or asset manager and may warehouse assets prior to the closing of a transaction. As part of its structured finance business, the Group purchases loans and other debt obligations from and on behalf of clients for the purpose of securitization. The loans and other debt obligations are sold to VIEs, which in turn issue CDOs to fund the purchase of assets such as investment grade and high yield corporate debt instruments.

Typically, the collateral manager in a managed CDO is deemed to be the entity that has the power to direct the activities that most affect the economics of the entity. In a static CDO this "power" role is more difficult to analyze and may be the sponsor of the entity or the CDS counterparty.

CDOs provide credit risk exposure to a portfolio of ABS (cash CDOs) or a reference portfolio of securities (synthetic CDOs). Cash CDO transactions hold actual securities whereas synthetic CDO transactions use CDS to exchange the underlying credit risk instead of using cash assets. The Group may also act as a derivative counterparty to the VIEs, which are typically not variable interests, and may invest in portions of the notes or equity issued by the VIEs. The CDO entities may have actively managed portfolios or static portfolios.

The securities issued by these VIEs are payable solely from the cash flows of the related collateral, and third-party creditors of these VIEs do not have recourse to the Group in the event of default.

The Group's exposure in CDO transactions is typically limited to interests retained in connection with its underwriting or market-making activities. Unless the Group has been deemed to have "power" over the entity and these interests are potentially significant, the Group is not the primary beneficiary of the vehicle and does not consolidate the entity. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risks of the VIEs.

Commercial paper conduit

The Group continues to act as the administrator and provider of liquidity and credit enhancement facilities for one asset-backed CP conduit, Alpine, a client-focused multi-seller conduit vehicle. Alpine publishes portfolio and asset data and submits its portfolio to a rating agency for public ratings based on the cash flows of the portfolio taken as a whole. This CP conduit purchases assets, primarily loans and receivables, from clients and finances such purchases through the issuance of CP backed by these assets. For an asset to qualify for acquisition by the CP conduit, it must be rated at least investment grade after giving effect to the related asset-specific credit enhancement primarily provided by the client seller of the asset. The clients provide credit support to investors of the CP conduit in the form of over-collateralization and other asset-specific enhancements. Further, an unaffiliated investor retains a limited first-loss position in Alpine's entire portfolio. The Group does not have any ownership interest in Alpine. However, the Group, as administrator and liquidity and credit enhancement facilities provider, has significant exposure and power over the activities of Alpine. Effective January 1, 2010, the Group was deemed the primary beneficiary of Alpine and consolidated it in accordance with the new guidance. For further information, refer to Note 1 – Summary of significant accounting policies.

The overall average maturity of the conduit's outstanding CP was approximately 14 days as of 2Q10 and 4Q09. As of 2Q10 and 4Q09, Alpine had the highest short-term ratings from Fitch, Moody's and Dominion Bond Rating Service and was rated A-1 by Standard & Poors. The majority of Alpine's purchased assets were highly rated loans or receivables in the consumer sector, including auto loans or leases, credit card receivables and student loans. As of 2Q10 and 4Q09, those assets had an average rating of AA, based on the lowest of each asset's external or internal rating, and an average maturity of 3.7 years and 3.6 years as of 2Q10 and 4Q09, respectively.

The Group's commitment to this CP conduit consists of obligations under liquidity agreements and a program-wide credit enhancement agreement. The liquidity agreements are

asset-specific arrangements, which require the Group to purchase assets from the CP conduit in certain circumstances, including a lack of liquidity in the CP market such that the CP conduit cannot refinance its obligations or, in some cases, a default of an underlying asset. The Group may, at its discretion, purchase assets that fall below investment grade in order to support the CP conduit. In both circumstances, the asset-specific credit enhancements provided by the client seller of the assets and the first-loss investor's respective exposures to those assets remain unchanged. In entering into such agreements, the Group reviews the credit risk associated with these transactions on the same basis that would apply to other extensions of credit. The program-wide credit enhancement agreement with the CP conduit would absorb potential defaults of the assets, but is senior to the credit protection provided by the client seller of assets and the first-loss investor.

The Group believes that the likelihood of incurring a loss equal to the maximum exposure is remote because the assets held by the CP conduit, after giving effect to related asset-specific credit enhancement primarily provided by the clients, are classified as investment grade. The Group's economic risks associated with the purchased assets of the CP conduit are included in the Group's risk management framework including counterparty, economic capital and scenario analysis.

Financial intermediation

The Group has significant involvement with VIEs in its role as a financial intermediary on behalf of clients.

The Group considers the likelihood of incurring a loss equal to the maximum exposure to be remote because of the Group's risk mitigation efforts, including, but not limited to, economic hedging strategies and collateral arrangements. The Group's economic risks associated with consolidated and non-consolidated VIE exposures arising from financial intermediation, together with all relevant risk mitigation initiatives, are included in the Group's risk management framework.

Financial intermediation consists of securitizations, funds, loans and other vehicles.

Securitizations

Securitizations are primarily CMBS, RMBS and ABS vehicles. The Group acts as an underwriter, market maker, liquidity provider, derivative counterparty and/or provider of credit enhancements to VIEs related to certain securitization transactions. In addition, the Group has exposure to third-party securitization VIEs as a result of certain securities purchased from its money market funds.

The maximum exposure to loss is the carrying value of the loan securities and derivative positions that are variable interests, if any, plus the exposure arising from any credit enhancements the Group provided. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risks of the VIEs.

Typically, the servicer of the assets in the VIE will be deemed to have the power that most significantly affects the economics of the entity. When a servicer or its related party also has an economic interest that has the potential to absorb a significant portion of the gains and/or losses, it will be deemed the primary beneficiary and consolidate the vehicle. The Group typically consolidates securitization vehicles when it is the servicer and has holdings stemming from its role as underwriter. Short-term market making holdings in vehicles are not typically considered to be potentially significant for the purposes of this assessment.

Funds

Funds include investment structures such as mutual funds, funds of funds, private equity funds and fund-linked products where the investors' interest is typically in the form of debt rather than equity, thereby making them VIEs. The Group may have various relationships with such VIEs in the form of structurer, investment advisor, investment manager, administrator, custodian, underwriter, placement agent, market maker and/or as prime broker. These activities include the use of VIEs in structuring fund-linked products, hedge funds of funds or private equity investments to provide clients with investment opportunities in alternative investments. In such transactions, a VIE holds underlying investments and issues securities that provide the investors with a return based on the performance of those investments.

The maximum exposure to loss consists of the fair value of instruments issued by such structures that are held by the Group as a result of underwriting or market-making activities, financing provided to the vehicles and the Group's exposure resulting from principal protection and redemptions features. The investors typically retain the risk of loss on such transactions, but for certain fund types, the Group may provide principal protection on the securities to limit the investors' exposure to downside market risk. The Group's maximum exposure to loss does not include any effects from financial instruments used to economically hedge the risk of the VIEs.

Funds have been deferred from the application of the recent FASB guidance. Rather than the revised consolidation model which incorporated power and the potential to absorb significant risk and rewards, the previous consolidation model was used which resulted in the Group being the primary bene-

ficiary and consolidating the funds if it held more than 50% of their outstanding issuances.

The Group repositioned certain of its money market funds by purchasing securities from those funds with the intent to eliminate structured investment vehicle, ABS, CDO and US subprime exposure. The securities transactions were executed in order to address liquidity concerns caused by the US market's challenging conditions. The Group had no legal obligation to purchase these securities.

As of the end of 2Q10 and 4Q09, the fair value of its balance sheet exposure was zero and CHF 260 million, respectively. Net gains on securities purchased from the Group's money market funds were CHF 143 million and CHF 20 million in 6M10 and 6M09, respectively.

Loans

Loans are single-financing vehicles where the Group provides financing for specified assets or business ventures and the respective owner of the assets or manager of the businesses provides the equity in the vehicle. These tailored lending arrangements are established to purchase, lease or otherwise finance and manage clients' assets.

The maximum exposure to loss is the carrying value of the Group's loan exposure, which is subject to the same credit risk management procedures as loans issued directly to clients. The clients' creditworthiness is carefully reviewed, loan-to-value ratios are strictly set and, in addition, clients provide equity, additional collateral or guarantees, all of which significantly reduce the Group's exposure. The Group considers the likelihood of incurring a loss equal to the maximum exposure to be remote because of the Group's risk mitigation efforts which includes over-collateralization and effective monitoring to ensure that a sufficient loan-to-value ratio is maintained.

The third-party sponsor of the VIE will typically have control over the assets during the life structure and have the potential to absorb significant gains and losses; The Group is typically not the primary beneficiary of these structures and will not have to consolidate them. However, a change in the structure, such as a default of the sponsor, may result in the Group gaining control over the assets. If the Group's lending is significant, it may then be required to consolidate the entity.

Other

Other includes additional vehicles where the Group provides financing and trust preferred issuance vehicles. Trust preferred issuance vehicles are utilized to assist the Group in raising capital efficient financing. The VIE issues preference shares which are guaranteed by the Group and uses the proceeds to purchase the debt of the Group. The Group's guarantee of its own debt is not considered a variable interest and, as it has no

holdings in these vehicles, the Group has no maximum exposure to loss. In the non-consolidated VIEs table, only the total assets of trust preferred issuance vehicles are disclosed, as the Group has no variable interests with these entities.

Consolidated VIEs

The Group has significant involvement with VIEs in its role as a financial intermediation on behalf of clients. The Group consolidated all VIEs related to financial intermediation for which it

was the primary beneficiary. As a result of the issuance of new guidance, certain entities in which the Group holds a majority of the voting rights are now being included in the disclosure as of 2010, primarily in the funds category. These entities were previously consolidated but were excluded from the scope of the table under previous guidance.

The consolidated VIEs tables provide the carrying amounts and classifications of the assets and liabilities of consolidated VIEs as of the end of 2Q10 and 4Q09.

Consolidated VIEs in which the Group was the primary beneficiary

	Financial intermediation						
end of 2Q10	CDO	CP Conduit	Securi- tizations	Funds	Loans	Other	Total

Total liabilities of consolidated VIEs	10,946	4,150	11,035	922	643	594	28,290

Total assets of consolidated VIEs increased CHF 30.5 billion, from CHF 8.8 billion as of 4Q09 to CHF 39.3 billion as of 2Q10. A significant portion of the increase was due to the adoption of ASU 2009-17 as of January 1, 2010, including an incremental increase to the Group's consolidated balance sheet from the adoption of ASU 2009-17 of CHF 15.0 billion and an increase in total assets of consolidated VIEs of CHF 12.9 billion of variable interest assets previously recognized on the Group's balance sheet as of the end of 4Q09 that are now recognized as assets of consolidated VIEs. Additionally, the increase includes CHF 2.6 billion of assets from 6M10 activity and certain previously consolidated VIEs that were not required to be included in this disclosure prior to the adoption of ASU 2009-17.

¹ The majority relates to loans held-for-sale.

Non-consolidated VIEs

The non-consolidated VIEs tables provide the carrying amounts and classification of the assets and liabilities of variable interests recorded in the Group's consolidated balance sheets, maximum exposure to loss and total assets of the non-consolidated VIEs.

Maximum exposure to loss represents the variable interests of non-consolidated VIEs that are recorded by the Group (for example, direct holdings in vehicles, loans and other receivables), as well as notional amounts of guarantees and off-balance sheet commitments which are variable interests that have been extended to non-consolidated VIEs. Such amounts, particularly notional amounts of derivatives and guarantees, do not represent the anticipated losses in connection with these transactions as they do not take into consideration the effect of collateral, recoveries or the probability of loss. In addition, they exclude the effect of offsetting financial instru-

ments that are held to mitigate these risks and have not been reduced by unrealized losses previously recorded by the Group in connection with guarantees or derivatives.

Non-consolidated VIE assets are related to the non-consolidated VIEs with whom the Group has variable interests. These amounts represent the assets of the entities themselves and are typically unrelated to the exposures the Group has with the entity and thus are not amounts that are considered for risk management purposes.

Certain involvement with VIEs have not been included in the following table, including VIEs structured by third parties in which the Group's interest is in the form of securities held in the Group's inventory, certain single-asset financing vehicles not sponsored by the Group to which the Group provides financing but has very little risk of loss due to over-collateralization and guarantees, failed sales where the Group does not have any other holdings and other entities out of scope.

In December 2009, the FASB issued ASU 2009-17, changing how a reporting entity determines when an entity that is insufficiently capitalized or is not controlled through voting (or similar rights) should be consolidated, but did not require retrospective application. The disclosure for 4Q09 has

not been restated to reflect the expanded scope of entities now subject to consolidation, primarily relating to qualified SPEs, and therefore is not comparable to the 2Q10 disclosure.

Note 25 Fair value of financial instruments

The fair value of the majority of the Group's financial instruments is based on quoted prices in active markets or observable inputs. These instruments include government and agency securities, certain CP, most investment grade corporate debt, certain high yield debt securities, exchange-traded and certain OTC derivative instruments and most listed equity securities.

In addition, the Group holds financial instruments for which no prices are available and which have little or no observable inputs. Further deterioration of financial markets could significantly impact the value of these financial instruments and the results of operations. For these instruments, the determination of fair value requires subjective assessment and varying degrees of judgment, depending on liquidity, concentration, pricing assumptions, the current economic and competitive environment and the risks affecting the specific instrument. In such circumstances, valuation is determined based on management's own assumptions about the assumptions that market participants would use in pricing the asset or liability, including assumptions about risk. These instruments include certain OTC derivatives, most mortgage-related and CDO securities, certain equity derivatives and equity-linked securities, private equity investments, certain loans and credit products, including leveraged finance, certain syndicated loans and certain high-grade bonds, and life insurance instruments.

The fair value of financial assets and liabilities is impacted by factors such as benchmark interest rates, prices of financial instruments issued by third parties, commodity prices, foreign exchange rates and index prices or rates. In addition, valuation adjustments are an integral part of the valuation process when market prices are not indicative of the credit quality of a counterparty, and are applied to both OTC derivatives and debt instruments. The impact of changes in a counterparty's credit spreads (known as credit valuation adjustments or CVA) is considered when measuring the fair value of assets and the impact of changes in the Group's own credit spreads (known as debit valuation adjustments or DVA) is considered when measuring the fair value of its liabilities. For OTC derivatives, the impact of changes in both the Group's and the counterparty's credit standing is considered when measuring their fair value, based on current CDS prices. The adjustments also take into account contractual factors designed to reduce the Group's credit exposure to a counterparty, such as collateral held and master netting agreements. For hybrid debt instruments with embedded derivative features, the impact of changes in the Group's credit standing is considered when measuring their fair value, based on current funded debt spreads.

The Group has availed itself of the simplification in accounting offered under the fair value option, primarily in the Investment Banking and Asset Management segments. This has been accomplished generally by electing the fair value option, both at initial adoption and for subsequent transactions, on items impacted by the hedge accounting requirements of US GAAP. That is, for instruments for which there was an inability to achieve hedge accounting and for which we are economically hedged, we have elected the fair value option. Likewise, where we manage an activity on a fair value basis but previously have been unable to achieve fair value accounting, we have utilized the fair value option to align our risk management reporting to our financial accounting.

In April 2009, the FASB amended and expanded the disclosure requirements for the Group's reporting of assets and liabilities measured at fair value on a recurring basis for level 3 for June 30, 2009, but did not require retrospective application.

Fair value hierarchy

The levels of the fair value hierarchy are defined as follows:

- Level 1: Quoted prices (unadjusted) in active markets for identical assets or liabilities that the Group has the ability to access. This level of the fair value hierarchy provides the most reliable evidence of fair value and is used to measure fair value whenever available.
- Level 2: Inputs other than quoted prices included within level 1 that are observable for the asset or liability, either directly or indirectly. These inputs include: (i) quoted prices for similar assets or liabilities in active markets; (ii) quoted prices for identical or similar assets or liabilities in markets that are not active, that is, markets in which there are few transactions for the asset or liability, the prices are not current or price quotations vary substantially either over time or among market makers, or in which little information is publicly available; (iii) inputs other than quoted prices that are observable for the asset or liability; or (iv) inputs that are derived principally from or corroborated by observable market data by correlation or other means.
- Level 3: Inputs that are unobservable for the asset or liability. These inputs reflect the Group's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are developed based on the best information available in the circumstances, which include the Group's own data. The Group's own data used to develop unobservable inputs is adjusted if information indicates that market participants would use different assumptions.

Gains and losses on assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (level 3)

in	6M10			6M09		
	Trading revenues	Other revenues	Total revenues	Trading revenues	Other revenues	Total revenues
Gains and losses on assets and liabilities (CHF million)						
Net realized/unrealized gains/(losses) included in net revenues	2,229	161	2,390¹	3,233	(2,487)	746 ¹
Whereof:						
Unrealized gains/(losses) relating to assets and liabilities still held as of the reporting date	1,897	50	1,947	(4,014)	(2,500)	(6,514)

¹ Excludes net realized/unrealized gains/(losses) attributable to foreign currency translation impact.

Both observable and unobservable inputs may be used to determine the fair value of positions that have been classified within level 3. As a result, the unrealized gains and losses for assets and liabilities within level 3 presented in the table above may include changes in fair value that were attributable to both observable and unobservable inputs.

The Group employs various economic hedging techniques in order to manage risks, including risks in level 3 positions. Such techniques may include the purchase or sale of financial instruments that are classified in levels 1 and/or 2. The realized and unrealized gains and losses for assets and liabilities in level 3 presented in the table above do not reflect the related realized or unrealized gains and losses arising on economic hedging instruments classified in levels 1 and/or 2.

Transfers in and out of level 3

Transfers from level 3 assets to level 2 during the quarter of CHF 2.8 billion were mostly offset by transfers from level 2 to level 3 of CHF 2.7 billion, resulting in a net quarterly transfer to level 2 of CHF 0.1 billion. The transfers between levels were driven by the availability of broker quotes in the market for credit, CDO and ABS products and increased observability in derivatives as products neared maturity.

Nonrecurring fair value changes

Certain assets and liabilities are measured at fair value on a nonrecurring basis; that is, they are not measured at fair value on an ongoing basis but are subject to fair value adjustments in certain circumstances, for example, when there is evidence of impairment.

of which level 3	0.6	1.0

Qualitative disclosures of valuation techniques

Money market instruments

Traded money market instruments include instruments such as bankers' acceptances, certificates of deposit, CP, book claims, treasury bills and other rights, which are held for trading purposes. Valuations of money market instruments are generally based on observable inputs.

Securities purchased under resale agreements and securities sold under repurchase agreements

Securities purchased under resale agreements and securities sold under repurchase agreements are measured at fair value using discounted cash flow analysis. Future cash flows are discounted using observable market interest rate repurchase/resale curves for the applicable maturity and underlying collateral of the instruments. As such, the significant majority of both securities purchased under resale agree-

ments and securities sold under repurchase agreements are included in level 2 of the fair value hierarchy. Structured resale and repurchase agreements include embedded derivatives, which are measured using the same techniques as described below for stand-alone derivatives. If the value of the embedded derivative is determined using significant unobservable parameters, those structured resale and repurchase agreements are classified within level 3 of the fair value hierarchy.

Securities purchased under resale agreements are usually fully collateralized or over collateralized by government securities, money market instruments, corporate bonds, or other debt instruments. In the event of counterparty default, the collateral service agreement provides the Group with the right to liquidate the collateral held.

Debt securities

Government debt securities typically have quoted prices in active markets and are categorized as level 1 instruments. For debt securities for which market prices are not available, valuations are based on yields reflecting credit rating, historical performance, delinquencies, loss severity, the maturity of the security, recent transactions in the market or other modeling techniques, which may involve judgment. For those securities where the price or model inputs are observable in the market they are categorized as level 2 instruments, while those securities where prices are not observable and significant model inputs are unobservable they are categorized as level 3.

Corporate bonds

Corporate bonds are priced to reflect current market levels either through recent market transactions or to broker or dealer quotes.

Where a market price for the particular security is not directly available, valuations are obtained based on yields reflected by other instruments in the specific or similar entity's capital structure and adjusting for differences in seniority and maturity, benchmarking to a comparable security where market data is available (taking into consideration differences in credit, liquidity and maturity) or through the application of cash flow modeling techniques utilizing observable inputs, such as current interest rate curves and observable CDS spreads.

CMBS, RMBS and ABS/CDO structures

Values of RMBS, CMBS and other ABS may be available through quoted prices, which are often based on the prices at which similarly structured and collateralized securities trade between dealers and to and from customers. Values of RMBS, CMBS and other ABS for which there are no significant observable inputs are valued using benchmarks to similar transactions or indices and other valuation models.

For most structured debt securities, determination of fair value requires subjective assessment depending on liquidity, ownership concentration, and the current economic and competitive environment. Valuation is determined based on management's own assumptions about how market participants would price the asset.

Collateralized bond and loan obligations are split into various structured tranches and each tranche is valued based upon its individual rating and the underlying collateral supporting the structure. Valuation models are used to value both cash and synthetic CDOs.

Equity securities

The majority of the Group's positions in equity securities are traded on public stock exchanges for which quoted prices are readily and regularly available and are therefore categorized as level 1 instruments. Level 2 equities include fund-linked products, convertible bonds or equity securities with restrictions and therefore are not traded in active markets.

Fund-linked products

Fund-linked products consist of investments in third-party hedge funds and funds of funds. The method of measuring fair value for these investments is the same as those described for other investments below.

Convertible bonds

Convertible bonds are generally valued using observable pricing sources. For a small minority of convertible bonds, no observable prices are available, and valuation is determined using internal and external models, for which the key inputs include stock prices, dividend rates, credit spreads (corporate and sovereign), yield curves, foreign exchange rates, prepayment rates and borrowing costs, and single stock and equity market volatility.

Derivatives

Derivatives held for trading purposes or used in hedge accounting relationships include both OTC and exchange-traded derivatives.

The fair values of exchange-traded derivatives measured using observable exchange prices are included in level 1 of the fair value hierarchy. Some observable exchange prices may not be considered executable at the reporting date and may have been adjusted for liquidity concerns. For those instruments where liquidity adjustments have been made to the exchange price, such as long-dated option contracts, the instrument has been included in level 2 of the fair value hierarchy.

The fair values of OTC derivatives are determined on the basis of either industry standard models or internally devel-

oped proprietary models. Both model types use various observable and unobservable inputs in order to determine fair value. The inputs include those characteristics of the derivative that have a bearing on the economics of the instrument.

The determination of the fair value of many derivatives involves only a limited degree of subjectivity because the required inputs are observable in the marketplace, while more complex derivatives may use unobservable inputs that rely on specific proprietary modeling assumptions. Examples of such specific unobservable inputs include long-dated volatility assumptions on OTC option transactions and recovery rate assumptions for credit derivative transactions.

Where observable inputs (prices from exchanges, dealers, brokers or market consensus data providers) are not available, attempts are made to infer values from observable prices through model calibration (spot and forward rates, benchmark interest rate curves and volatility inputs for commonly traded option products). For inputs that cannot be derived from other sources, estimates from historical data may be made.

OTC derivatives where the majority of the value is derived from market observable inputs are categorized as level 2 instruments, while those where the majority of value is derived from unobservable inputs are categorized as level 3.

Interest rate derivatives

OTC vanilla interest rate products, such as interest rate swaps, swaptions, and caps and floors are valued by discounting the anticipated future cash flows. The future cash flows and discounting are derived from market standard yield curves and industry standard volatility inputs. Where applicable, exchange-traded prices are also used to value exchange traded futures and options and can be used in yield curve construction. For more complex products, inputs include, but are not limited to basis swap spreads, constant maturity convexity adjustments, constant maturity treasury spreads, inflation-index correlations, inflation seasonality, single and quanto interest rate correlations, cross asset correlations, mean reversion, serial correlation and conditional prepayment rate assumptions.

Foreign exchange derivatives

Foreign exchange derivatives include vanilla products such as spot, forward and option contracts where the anticipated discounted future cash flows are determined from foreign exchange forward curves and industry standard optionality modeling techniques. Where applicable, exchange traded prices are also used for futures and option prices. For more complex products inputs include, but are not limited to foreign exchange rate correlations, quanto cross asset correlations and volatility skew assumptions.

Equity derivatives

Equity derivatives include vanilla options and swaps in addition to different types of exotic options. Inputs for equity derivatives can include borrowing costs, dividend curves, equity to equity correlations, equity to foreign exchange rate correlations, single name and index volatility, fund gap risk, fund volatility, interest rate to equity correlation and yield curve.

Credit derivatives

Credit derivatives include index and single name CDS in addition to more complex structured credit products. Vanilla products are valued using industry standard models and inputs that are generally market observable including credit spreads and recovery rates.

Complex structured credit derivatives are valued using proprietary models requiring inputs such as credit spreads, recovery rates, credit volatilities, default correlations, cash/synthetic basis spreads and prepayment rate. These input parameters are generally implied from available market observable data.

Commodity derivatives

Commodity derivatives include forwards, vanilla and exotic options, swaps, swaptions, and structured transactions. Vanilla products are generally valued using industry standard models, while more complex products may use proprietary models. Commodity derivative model inputs include cross commodity correlation, FX-commodity correlation, commodity forward rate curves, spot prices, commodity volatility and the yield curve. Inputs can be validated from executed trades, broker and consensus data. In other cases, historic relationships may be used to estimate model inputs.

Other trading assets

Other trading assets include cash and synthetic life finance instruments. Cash instruments include SPIA, premium finance, and life settlement contracts at fair value, whereas synthetic instruments include longevity swaps, options and notes.

These instruments are valued using proprietary models using several inputs however; central to the calculation of fair value for life finance instruments is the estimate of mortality rates. Individual mortality rates are typically obtained by multiplying a base mortality curve for the general insured population provided by a professional actuarial organization together with an individual-specific multiplier. Individual specific multipliers are determined based on data from third-party life expectancy data providers, which examine insured individual's medical conditions, family history and other factors to arrive at a life expectancy estimate. In addition to mortality rates, discount rates and credit spreads are also inputs into the valuation of life finance instruments.

Due to the limited observability in the market of mortality rates the vast majority of life finance instruments are categorized as level 3 instruments.

Other investments

Other investments principally includes equity investments in the form of a) direct investments in third-party hedge funds, private equity funds and funds of funds, b) equity-method investments where the Group has the ability to significantly influence the operating and financial policies of the investee, and c) direct investments in non-marketable equity securities.

Direct investments in third-party hedge funds, private equity and funds of funds are measured at fair value based on their published NAVs. Most of these investments are classified in level 3 of the fair value hierarchy, as there are restrictions imposed upon the redemption of the funds at their NAV in the near term. In some cases, NAVs may be adjusted where there exists sufficient evidence that the NAV published by the investment manager is not current with observed market movements or there exists other circumstances that would require an adjustment to the published NAV. Significant management judgment is involved in making any adjustments to the published NAVs.

Direct investments in non-marketable equity securities consist of both real estate investments and non-real estate investments. Equity-method investments and direct investments in nonmarketable equity securities are initially measured at their transaction price, as this is the best estimate of fair value. Thereafter, these investments are individually measured at fair value based upon a number of factors that include any recent rounds of financing involving third-party investors, comparable company transactions, multiple analyses of cash flows or book values, or discounted cash flow analyses. The availability of information used in these modeling techniques is often limited and involves significant management judgment in evaluating these different factors over time. As a result, these investments are included in level 3 of the fair value hierarchy.

Loans

The Group's loan portfolio measured at fair value includes commercial loans, residential loans, corporate loans, leveraged financed loans and emerging market loans. Fair value is based on recent transactions and quoted prices, where available.

Where recent transactions and quoted prices are not available, fair value may be determined by relative value benchmarking (which includes pricing based upon another position in the same capital structure, other comparable loan issues, generic industry credit spreads, implied credit spreads derived from CDS for the specific borrower, and enterprise valuations) or calculated based on the exit price of the collateral, based on current market conditions.

Both the funded and unfunded CDS pricing model, which requires estimates of significant inputs including credit spreads, recovery rates, credit conversion factors, and weighted average life of the loan.

The Group's other assets and liabilities include mortgage loans held in conjunction with securitization activities and assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP. The fair value of mortgage loans held in conjunction with securitization activities is determined on a whole-loan basis. Whole-loan valuations are calculated based on the exit price reflecting the current market conditions. The fair value of assets and liabilities of VIEs and mortgage securitizations that do not meet the criteria for sale treatment under US GAAP is determined based on the quoted prices for securitized bonds, where available, or on cash flow analyses for securitized bonds, when quoted prices are not available.

Short-term borrowings and long-term debt

The Group's short-term borrowings and long-term debt include structured notes (hybrid financial instruments that are both bifurcatable and non-bifurcatable) and vanilla debt.

The fair value of structured notes is based on quoted prices, where available. When quoted prices are not available, fair value is determined by using a discounted cash flow model incorporating the Group's credit spreads, the value of derivatives embedded in the debt and the residual term of the issuance based on call options. Derivatives structured into the issued debt are valued consistently with the firms' stand-alone derivatives as discussed above. The fair value of structured debt is heavily influenced by the combined call options and performance of the underlying derivative returns.

Vanilla debt is fair valued to the new issue market using risk-free yield curves for similar maturities and the Group's own credit spread.

¹ Primarily recognized in net interest income. ² Primarily recognized in trading revenues. ³ Primarily recognized in other revenues. ⁴ Changes in fair value related to credit risk is due to the change in the Group's own credit spreads. Other changes in fair value are attributable to changes in foreign currency exchange rates and interest rates, as well as movements in the reference price or index for structured notes. Changes in fair value on Credit Suisse vanilla debt related to credit risk were CHF 961 million and CHF (3,074) million in 6M10 and 6M09, respectively.

Fair value measurements of investments in certain entities that calculate NAV per share

The following table pertains to investments in certain entities that calculate NAV per share or its equivalent, primarily private

equity and hedge funds. These investments do not have a readily determinable fair value and are measured at fair value using NAV.

¹ 40% of the redeemable fair value amount of equity funds is redeemable on demand with a notice period of less than 30 days, 38% is redeemable on a monthly basis with a notice period primarily of more than 30 days and 13% is redeemable on an annual basis with a notice period of more than 60 days. ² 61% of the redeemable fair value amount of hedge funds is redeemable on a quarterly basis with a notice period of more than 60 days, 23% is redeemable on an annual basis with a notice period of more than 60 days and 9% is redeemable on demand with a notice period of less than 30 days. ³ Includes CHF 2,631 million attributable to noncontrolling interests. ⁴ Includes CHF 803 million attributable to noncontrolling interests.

Investments in funds held in trading assets and liabilities primarily include positions held in equity funds of funds as an economic hedge for structured notes and derivatives issued to clients that reference the same underlying risk and liquidity terms of the fund. A majority of these funds have limitations imposed on the amount of withdrawals from the fund during the redemption period due to illiquidity of the investments. In other instances, the withdrawal amounts may vary depending on the redemption notice period and are usually larger for the longer redemption notice periods. In addition, penalties may apply if redemption is within a certain time period from initial investment.

Investment in funds held in other investments principally invest in private securities and, to a lesser extent, publicly traded securities and fund of funds. Several of these investments have redemption restrictions subject to discretion of the Board of Directors of the fund and/or redemption is permitted without restriction, but is limited to a certain percentage of total assets or only after a certain date.

Furthermore, for those investments held in both trading assets and other investments that are nonredeemable, the underlying assets of such funds are expected to be liquidated over the life of the fund, which are generally up to ten years.

Disclosures about fair value of financial instruments

US GAAP requires the disclosure of the fair values of financial instruments for which it is practicable to estimate those values, whether or not they are recognized in the consolidated

financial statements, excluding all non-financial instruments such as lease transactions, real estate, premises and equipment, equity method investments and pension and benefit obligations.

Note 27 **Subsidiary guarantee information**

On March 26, 2007, the Group and the Bank issued full, unconditional and several guarantees of Credit Suisse (USA), Inc.'s outstanding US SEC-registered debt securities. In accordance with the guarantees, if Credit Suisse (USA), Inc. fails to make any timely payment under the agreements governing such debt securities, the holders of the debt securities

may demand payment from either the Group or the Bank, without first proceeding against Credit Suisse (USA), Inc. The guarantee from the Group is subordinated to senior liabilities. Credit Suisse (USA), Inc. is an indirect, wholly owned subsidiary of the Group.

¹ Includes eliminations and consolidation adjustments.

Note 28 **Litigation**

The Group is involved in a number of judicial, regulatory and arbitration proceedings concerning matters arising in connection with the conduct of its businesses. Some of these actions have been brought on behalf of various classes of claimants and seek damages of material and/or indeterminate amounts. The Group believes, based on currently available information and advice of counsel, that the results of such proceedings, in the aggregate, will not have a material adverse effect on its financial condition but might be material to operating results for any particular period, depending, in part, upon the operating results for such period. The Group believes that the reasonably possible losses relating to such claims in excess of its provisions are either not material or not estimable.

The Group accrues for legal costs (including fees and expenses of external lawyers and other service providers) in connection with certain judicial, regulatory and arbitration proceedings when such costs are probable and reasonably estimable.

It is inherently difficult to predict the outcome of many of these matters. In presenting the condensed consolidated financial statements, management makes estimates regarding the outcome of these matters, records a reserve and takes a charge to income when losses with respect to such matters are probable and can be reasonably estimated. Estimates, by their nature, are based on judgment and currently available information and involve a variety of factors, including, but not limited to, the type and nature of the litigation, claim or proceeding, the progress of the matter, the advice of legal counsel, the Group's defenses and its experience in similar cases or proceedings, as well as its assessment of matters, including settlements, involving other defendants in similar or related cases or proceedings.

Further charges or releases of litigation reserves may be necessary in the future as developments in such litigation, claims or proceedings warrant.

Cautionary statement regarding forward-looking information

This report contains statements that constitute forward-looking statements within the meaning of the Private Securities Litigation Reform Act. In addition, in the future we, and others on our behalf, may make statements that constitute forward-looking statements. Such forward-looking statements may include, without limitation, statements relating to the following:

- our plans, objectives or goals;
- our future economic performance or prospects;
- the potential effect on our future performance of certain contingencies; and
- assumptions underlying any such statements.

Words such as "believes," "anticipates," "expects," "intends" and "plans" and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements. We do not intend to update these forward-looking statements except as may be required by applicable securities laws.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that predictions, forecasts, projections and other outcomes described or implied in forward-looking statements will not be achieved. We caution you that a number of important factors could cause results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- the ability to maintain sufficient liquidity and access capital markets;
- market and interest rate fluctuations;
- the strength of the global economy in general and the strength of the economies of the countries in which we conduct our operations, in particular the risk of a continued US or global economic downturn in 2010 and beyond;
- the direct and indirect impacts of continuing deterioration of subprime and other real estate markets;
- further adverse rating actions by credit rating agencies in respect of structured credit products or other credit-related exposures or of monoline insurers;

- the ability of counterparties to meet their obligations to us;
- the effects of, and changes in, fiscal, monetary, trade and tax policies, and currency fluctuations;
- political and social developments, including war, civil unrest or terrorist activity;
- the possibility of foreign exchange controls, expropriation, nationalization or confiscation of assets in countries in which we conduct our operations;
- operational factors such as systems failure, human error, or the failure to implement procedures properly;
- actions taken by regulators with respect to our business and practices in one or more of the countries in which we conduct our operations;
- the effects of changes in laws, regulations or accounting policies or practices;
- competition in geographic and business areas in which we conduct our operations;
- the ability to retain and recruit qualified personnel;
- the ability to maintain our reputation and promote our brand;
- the ability to increase market share and control expenses;
- technological changes;
- the timely development and acceptance of our new products and services and the perceived overall value of these products and services by users;
- acquisitions, including the ability to integrate acquired businesses successfully, and divestitures, including the ability to sell non-core assets;
- the adverse resolution of litigation and other contingencies;
- the ability to achieve our cost efficiency goals and other cost targets; and
- our success at managing the risks involved in the foregoing.

We caution you that the foregoing list of important factors is not exclusive. When evaluating forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, as well as the information set forth in our Annual Report 2009 under IX – Additional Information – Risk Factors.
