405 A – Introduction
406 B – Selected financial data
410 C – Information on the company
411 D – Information required by industry guide 3
Dear Shareholders,

2010 was a year of substantial improvement for us. We achieved a net profit attributable to UBS shareholders of CHF 7.5 billion¹, compared with a loss of CHF 2.7 billion in 2009. Our return on equity for 2010 improved to 16.7% from negative 7.8% at the end of 2009. We believe that providing outstanding levels of execution and delivering sustainable profitability are the cornerstones on which we can build a successful future, and that the progress we made during 2010 has enhanced our reputation with stakeholders.

Sustaining this progress will require us to continue to act with discipline and integrity, and to maintain a sharp focus on achieving our targets. During the year we increased revenues by CHF 9 billion compared with 2009, while at the same time reducing overall risk levels. We maintained discipline over our cost base, achieving our targeted fixed costs of less than CHF 20 billion. Our clients have once again entrusted us with net new money, with net inflows stabilizing in the second half of the year. Profits for 2010 were a key driver of the increase in our Basel II tier 1 capital ratio, which stood at an industry-leading 17.8% at the year-end. While our results for 2010 showed a marked improvement, we have far greater ambitions. In 2011 we will continue to build further on our achievements.

Most of our business divisions showed an improvement compared with 2009. In Wealth Management, client confidence remained subdued in volatile markets, affecting overall transaction volumes. Market rates of interest also remained low during the year. Against this backdrop, Wealth Management’s pre-tax profit increased to CHF 2,308 million compared with CHF 2,280 million in 2009, mainly as a result of reduced operating expenses. Total operating income declined marginally on lower interest income reflecting the interest rate environment as well as the effects of foreign exchange on our results, particularly the decrease in the value of the euro and US dollar against the Swiss franc. Fee income decreased on a lower average asset base, but trading income increased reflecting the work we have done to further strengthen our advisory relationship with clients. Invested assets declined by 7% as foreign exchange movements and outflows more than offset positive investment performance. Operating expenses declined by 3% mainly reflecting reduced personnel and restructuring costs.

In Retail & Corporate, pre-tax profit increased by 9% to CHF 1,772 million compared with 2009. Total operating income remained broadly stable, with net interest income impacted by low market interest rates. Operating expenses were reduced by 8%, reflecting cost-cutting measures initiated in 2009.

Wealth Management Americas reported a pre-tax loss of CHF 130 million compared with a pre-tax profit of CHF 32 million in 2009. The result belies the considerable operational progress made during the year, the benefits of which were more than offset by a significant increase in litigation provisions. We believe the restructuring of this business over the past year will allow us to leverage our strong competitive positioning going forward. Retaining talent within the business is key, and we are encouraged that financial advisors with us for more than one year delivered a strong performance, especially in the fourth quarter. Operating income was flat, with improved managed account fees and higher mutual fund revenues offset by a decrease in municipal trading income. Net new money trends in the business are encouraging, with the business delivering positive net new money in the second half of the year.

In 2010, Global Asset Management continued to build on its already sound investment track record with a pre-tax profit of CHF 516 million, an increase of 18% compared with 2009. This was achieved despite a decrease in invested assets as positive investment performance and net new money inflows were more than offset by negative currency effects. Operating income was down by 4% due to lower performance fees and lower revenues also reflecting the sale of UBS Pactual. Operating expenses decreased by 9%.

Our Investment Bank contributed most to the improvement in our 2010 results, recording a pre-tax profit of CHF 2,197 million compared with a pre-tax loss of CHF 6,081 million in 2009. This was primarily due to a reversal of losses in our fixed income, currencies and commodities business and reflects the rebuild of our credit business where revenues rose significantly. In 2010 we recorded considerably lower net credit loss expenses and lower own credit losses, partly offset by an increase in operating expenses.

We continued to maintain tight control over our risks and balance sheet alongside improvements in profitability over the year. Risk-weighted assets were reduced by 4% during the year to CHF 199 billion, and, on 31 December 2010, our balance sheet stood at CHF 1,317 billion, down 2% compared with the prior year. The increase in our regulatory capital, together with a reduction in risk-weighted assets, led to an improvement of our BIS tier 1 capital ratio to 17.8% compared with 15.4% at the end of 2009.

During 2010 the regulatory landscape shifted substantially with the expectation of more stringent regulatory requirements becoming a reality. New global regulatory pro-

¹ Our 2010 results were adjusted after the issuance of our fourth quarter 2010 report. The adjustment, which increased the net profit attributable to UBS shareholders by CHF 373 million, is explained in Note 33 to the financial statements included in our Annual Report 2010.
posals were finalized by the Basel Committee on Banking Supervision early this year, and the Swiss Federal Council published draft legislation for Swiss banks based on the recommendations of the Swiss Expert Commission and designed to address the “too big to fail” issue. These proposals are due to be debated in the Swiss Parliament later this year. We will continue to evaluate the impacts of these changes, especially the effect that they may have on the profitability of our businesses, and, where necessary, we will take appropriate action. As previously stated, we will retain earnings in order to meet the recommended future capital requirements.

Recent quarters have demonstrated that our results for certain divisions, and for the Group as a whole, are highly sensitive to regulatory, legal and tax developments. In 2011, we believe that we may have opportunities to recognize further deferred tax assets in our results. We also expect that provisions for litigation and other contingencies will continue to affect us, although the timing and magnitude of these developments are not predictable.

In the current environment it is more important than ever that we focus on our clients’ needs. During the year we continued to implement our global and integrated bank strategy. We
improved the way in which we deliver our products and services to clients, which in turn should help us achieve further revenue growth. As part of this strategy we established our Investment Products and Services unit. We believe that this unit will play a crucial role, ensuring that our clients receive fast and efficient access to products and services tailored to their individual needs. Alongside this we set up our Global Family Office Group, catering to the often complex needs of many of the world’s wealthiest families.

We continued our tradition of supporting the local communities in which we live and work. We believe that our success stems not only from our employees’ skills and resources and from our relationships with our clients, but also from a healthy social environment. All over the world, our regional Community Affairs teams organize a wide variety of charitable activities in addition to direct donations made by the firm. Across all of our business regions, our employees continue to play a very active role in our community investment efforts, in particular through their volunteering activities. In 2010, our employees spent nearly 81,000 hours volunteering. We support their commitment by offering up to two working days a year for volunteering efforts, and also match employee donations to selected charities. In 2010 we also announced our support of the UBS Kids Cup, an athletics competition in Switzerland involving up to 70,000 children aged 7 to 15, helping to promote health and well-being.

During the year there were signs of improved client confidence in UBS. Building on this momentum, in August we launched our new brand campaign, our first global campaign for two years. The “We will not rest” campaign conveys our commitment to and focus on our clients at every level of the organization.

The ultimate responsibility for the firm’s strategy and the supervision of its executive management rests with the Board of Directors. We welcome the announcement that Joseph Yam, founder and former Chief Executive of the Hong Kong Monetary Authority, has been nominated for election to the Board. His expected appointment following the 2011 Annual General Meeting should further strengthen UBS’s Board of Directors, allowing us to benefit from his considerable experience. We recently announced that Sally Bott has resigned from the Board. We would like to express our gratitude to Sally for her outstanding contributions and great commitment during the past two and a half years.

2010 was a year of substantial improvement in our financial performance and our financial condition, and we would like to take this opportunity to thank you, our shareholders, for your continued support, and all of our employees for their hard work and commitment. In 2011, we are confident that we can consolidate the progress already made throughout the firm, helping to deliver our goal of long-term sustainable profitability for our shareholders.

15 March 2011

Yours sincerely,

UBS

Kaspar Villiger
Chairman of the Board of Directors

Oswald J. Grübel
Group Chief Executive Officer

Reporting publications

Annual publications: Annual report (SAP no. 80531): Published in both English and German, this single volume report provides a description of: our UBS Group strategy, performance and responsibility; the strategy and performance of the business divisions and the Corporate Center; risk and treasury management; corporate governance and senior management and Board of Directors compensation; and financial information, including the financial statements. Review (SAP no. 80530): The booklet contains key information on our strategy and financials. It is published in English, German, French and Italian. Compensation Report (SAP no. 82307): The report discusses compensation for senior management and the Board of Directors (executive and non-executive members). It is published in English and German.

How to order reports

The annual and quarterly publications are available in PDF format on the internet at www.ubs.com/investors/topics in the “Financial information” section. Printed copies can be ordered from the same website by accessing the order/subscribe panel on the left-hand side of the screen. Alternatively, they can be ordered by quoting the SAP number and the language preference where applicable, from UBS AG, F2AL-AUL, P.O. Box, CH-8098 Zurich, Switzerland.

Other information

Website: The “Analysts & Investors” section at www.ubs.com/investors provides the following information on UBS: financial information (including SEC results-related filings); corporate information, including UBS share price charts and data and dividend information; the UBS event calendar; and presentations by management for investors and financial analysts. Information on the internet is available in English and German, with some sections in French and Italian.

Result presentations: Our quarterly results presentations are webcast live. A playback of most presentations is downloadable at www.ubs.com/presentations.

Messaging service/UBS news alert: On the www.ubs.com/newsalerts website, it is possible to subscribe to receive news alerts about UBS via SMS or e-mail. Messages are sent in English, German, French or Italian and it is possible to state theme preferences for the alerts received.

Form 20-F and other submissions to the US Securities and Exchange Commission: We file periodic reports and submit other information about UBS to the US Securities and Exchange Commission (SEC). Principal among these filings is the annual report on Form 20-F, filed pursuant to the US Securities Exchange Act of 1934. The filing of Form 20-F is structured as a “wrap-around” document. Most sections of the filing can be satisfied by referring to parts of the annual report. However, there is a small amount of additional information in Form 20-F which is not presented elsewhere, and is particularly targeted at readers in the US. Readers are encouraged to refer to this additional disclosure. Any document that we file with the SEC is available to read and copy on the SEC’s website, www.sec.gov, or at the SEC’s public reference room at 100 F Street, N.E., Room 1580, Washington, DC, 20549. Please call the SEC by dialing +1-800-SEC-0330 for further information on the operation of its public reference room. Much of this additional information may also be found on the UBS website at www.ubs.com/investors, and copies of results-related filings with the SEC may be obtained from our Investor Relations team at www.ubs.com/investors.
Corporate information

The legal and commercial name of the company is UBS AG. The company was formed on 29 June 1998, when Union Bank of Switzerland (founded 1862) and Swiss Bank Corporation (founded 1872) merged to form UBS.

UBS AG is incorporated and domiciled in Switzerland and operates under Swiss Company Law and Swiss Federal Banking Law as an Aktiengesellschaft, a corporation that has issued shares of common stock to investors.

The addresses and telephone numbers of our two registered offices are: Bahnhofstrasse 45, CH-8001 Zurich, Switzerland, phone +41-44-234 11 11; and Aeschenvorstadt 1, CH-4051 Basel, Switzerland, phone +41-61-288 50 50.

UBS AG shares are currently listed on the SIX Swiss Exchange and the New York Stock Exchange.

Strategy, performance and responsibility

Information assured according to the Global Reporting Initiative (GRI)

Content of the sections “Our employees” and “Corporate responsibility” has been assured by SGS Société Générale de Surveillance SA (SGS) using the GRI Sustainability Reporting Guidelines, as evidenced in the SGS Assurance Statement on page 70. The assurance by SGS also covered text and data on the website of UBS. Both the relevant text in the Annual Report 2010 and on the website are referenced in the GRI Index (www.ubs.com/gri), which defines the scope of the assurance. SGS has confirmed the level of assurance as GRI A+.
Strategy and performance

– We are a client-focused financial services firm that offers a strong combination of wealth management, asset management and investment banking services on a global and regional basis.

– We aim to generate sustainable earnings and create value for our shareholders.

Our strategic priorities

We are concentrating on:
– further strengthening our position as a leading bank for high net worth and ultra high net worth clients around the world;
– continuing our leadership across all client segments in Switzerland;
– attaining a top-tier position in the growth regions in which we choose to operate; and
– remaining a leading investment bank with a client-centric business model, focusing on flow trading and advice, leveraging our traditional strengths and maximizing our scope by working in close conjunction with our wealth management and asset management businesses.

Transfoming the way we operate

Our transformation is geared towards exploiting the full potential of our strengths based on our three strategic guidelines of reputation, integration and execution.

Our reputation is our most valuable asset. It is ultimately defined by the actions and decisions we take every day. In order to restore and safeguard our reputation, we have introduced more disciplined and effective governance processes.

Integration is a key factor in serving our clients and driving efficiencies across our businesses, and is essential to our ability to achieve our financial targets. Integration is being achieved through a series of measures, including several dedicated client-related initiatives around the globe, and related improvements in client coverage and management processes.

We are committed to execution at the highest standards, ensuring consistent high-quality delivery to clients as well as within the firm. Furthermore, we are further developing our performance-oriented culture to help us to attract, develop and retain top industry talent.

Re-focusing the business portfolio

We will further foster collaboration between our wealth management, asset management and investment banking businesses, reflecting our commitment to serve our clients comprehensively across all segments. We believe this will improve our operating and financial results and will generate more shareholder value. From a geographic perspective, we want to leverage our strong existing global footprint. We are continuously investing in our Asia Pacific businesses as well as other growth markets such as the Middle East and Latin America.

6 Refer to the “UBS shares in 2010” section of this report.

The 2010 results and the balance sheet in this report differ from those presented in our fourth quarter 2010 report issued on 8 February 2011. The net impact of adjustments made subsequent to the publication of the unaudited fourth quarter 2010 financial report on net profit attributable to UBS shareholders was a gain of CHF 373 million, which increased basic and diluted earnings per share by CHF 0.10.

Refer to “Note 33 Events after the reporting period” in the “Financial information” section of this report for more information.
UBS draws on its 150-year heritage to serve private, institutional and corporate clients worldwide, as well as retail clients in Switzerland. We combine our wealth management, investment banking and asset management businesses with our Swiss operations to deliver superior financial solutions. Headquartered in Zurich and Basel, Switzerland, UBS has offices in more than 50 countries, including all major financial centers, and employs approximately 65,000 people. Under Swiss company law, UBS is organized as an Aktiengesellschaft, a corporation that has issued shares of common stock to investors.

**UBS business model and aspiration**

UBS AG is the parent company of the UBS Group (Group). The operational structure of the Group comprises the Corporate Center and four business divisions: Wealth Management & Swiss Bank, Wealth Management Americas, Global Asset Management and the Investment Bank.

In aspiring to be a leading client-focused financial services firm, we are concentrating on:

- further strengthening our position as a leading bank for high net worth and ultra high net worth clients around the world;
- continuing our leadership across all client segments in Switzerland;
- attaining a top-tier position in the growth regions in which we choose to operate; and
- remaining a leading investment bank with a client-centric business model, focusing on flow trading and advice, leveraging our traditional strengths and maximizing our scope by working in close conjunction with our wealth management and asset management businesses.

**Wealth Management Americas**

Wealth Management Americas provides advice-based solutions through financial advisors who deliver a fully integrated set of products and services specifically designed to address the needs of ultra high net worth, high net worth and core affluent individuals and families. It includes the domestic United States business (Wealth Management US), the domestic Canadian business and international business booked in the United States.

**Global Asset Management**

Global Asset Management is a large-scale asset manager with businesses diversified across regions, capabilities and distribution channels. It offers investment capabilities and styles across all major traditional and alternative asset classes including equities, fixed income, currency, hedge fund, real estate and infrastructure that can also be combined into multi-asset strategies. The fund
services unit provides legal fund set-up and accounting and reporting for retail and institutional funds.

**Investment Bank**
The Investment Bank provides securities and other financial products and research in equities, fixed income, rates, foreign exchange and commodities. It also provides advisory services and access to the world’s capital markets for corporate and institutional clients, sovereign and governmental bodies, financial intermediaries, alternative asset managers and private investors.

**Corporate Center**
The Corporate Center provides and manages support and control functions for the Group in such areas as risk control, finance, legal and compliance, funding, capital and balance sheet management, management of non-trading risk, communication and branding, human resources, information technology, real estate, procurement, corporate development and service centres. Most costs and personnel of the Corporate Center are allocated to the business divisions.

➔ Refer to the “Accounting and reporting structure changes” and “UBS business divisions and Corporate Center” sections of this report for more information on our businesses

**UBS’s competitive profile**
Our business mix reflects decades of continuous development, organic growth and acquisitions. As a leader in the wealth management industry in terms of total invested assets, we offer a combination of wealth management, investment banking and asset management and services in local and regional markets. Specifically, we are a leading wealth manager in Switzerland, Europe, and the Asia Pacific region and are well positioned in main growth markets such as the Middle East and Latin America. In the US, we are a leading wealth management service provider and are the biggest foreign-owned wealth manager. Furthermore, we have the largest ultra high net worth business globally in terms of invested assets. Our Investment Bank maintains a strong presence among global corporate and institutional clients, and holds leading positions in equities, foreign exchange, money markets, mergers and acquisitions and financial advisory services. In the Asia Pacific region, we operate leading investment banking, wealth management and asset management businesses.

**UBS’s strategy**
At the end of 2009, we established strategic objectives to improve our financial performance and reposition the firm in order to generate sustainable profitability and increased shareholder value. These strategic objectives and the related medium-term financial targets were reiterated at our Investor Day in November 2010. Our strategy is built on two primary pillars: re-focusing our business portfolio to fully capitalize on our strengths, and transforming the way we operate, exploiting the full potential of our strengths based on our three strategic guidelines of reputation, integration and execution. We are delivering against this strategy and have made progress in improving our financial performance during 2010.

Re-focusing the business portfolio
We will further foster collaboration between our wealth management, asset management and investment banking businesses, reflecting our commitment to serve our clients comprehensively across all segments. We believe this will improve our operating and financial results and will generate more shareholder value.
Strategy, performance and responsibility
Strategy and structure

The Investment Bank’s strategy is centered on an aligned and integrated client-centric business model, built around flow trading and advice, and is supported by a disciplined risk control framework. The existing capabilities in equities and fixed income, currencies and commodities have been unified into one integrated securities platform to better serve our clients. We will continue to review the Investment Bank’s business mix to take into account changes in law affecting certain businesses, increased capital requirements and market developments.

In Wealth Management, we are focusing on capturing growth opportunities in Asia, the emerging markets and the ultra high net worth segment, while transforming our cross-border business and building on our onshore presence in key markets. Our Retail & Corporate business unit aims to further strengthen our leading position in Switzerland, working together with our other businesses.

The geographic and stylistic diversification of Global Asset Management is at the core of our efforts to deliver superior investment performance for clients and capture growth opportunities. Additionally, we are working to expand on our strong third-party institutional business.

In Wealth Management Americas, we have shifted from a scale-driven model to one based on advice, led by our financial advisors and focused on high net worth and ultra high net worth clients. We believe this shift in strategy will lead to sustainable profitability.

From a geographic perspective, we want to leverage our strong existing global footprint. We are continuously investing in our Asia Pacific businesses as well as other growth markets such as the Middle East and Latin America. For example, in April 2010, we announced that we would acquire the Brazilian brokerage firm, Link Investimentos (subject to regulatory approval), a key milestone in our efforts to re-build our presence in Brazil and expand our footprint in Latin America.

Transforming the way we operate
Our transformation is geared towards exploiting the full potential of our strengths based on our three strategic guidelines of reputation, integration and execution.

Our reputation is our most valuable asset. It is ultimately defined by the actions and decisions we take every day. In order to restore and safeguard our reputation, we have introduced more disciplined and effective governance processes. The resolution of the US-cross-border issue in November 2010 was one important

UBS Switzerland

We are committed to our Swiss home market. Switzerland is the only country in which retail, corporate and institutional banking, wealth and asset management as well as investment banking are present. We strive to be the leading bank with regard to client satisfaction, employee engagement and sustainable profitability. Within the Swiss market, we maintain a leading position in all of our businesses.

Through our network of over 300 branches including around 4,700 client-facing staff, we reach approximately 80% of Swiss wealth. We serve every third household, every third wealthy individual and almost half of all Swiss companies.

Our strategy leverages our strengths and leading position in Switzerland and our integrated bank model allows us to offer a very broad range of products and services to our clients. For example, we can offer our private clients banking products and services needed throughout their lives, ensuring the stability and continuity of the relationship. The same holds true for our corporate and institutional clients. We also offer our clients in Switzerland access to our global asset gathering and investment banking expertise.

UBS Switzerland operates with an integrated management team consisting of the heads of all Swiss business segments and support functions.
step in this process. Also, we launched a new corporate identity program in 2010, including the world-wide brand campaign “We will not rest”, and a corresponding sponsorship strategy to raise our brand awareness.

Integration is a key factor in serving our clients and driving efficiencies across our businesses and is essential to our ability to achieve our financial targets. Integration is being achieved through a series of measures, including several dedicated client-related initiatives around the globe, and related improvements in client coverage and management processes. For example, we have established our Investment Products and Services (IPS) unit, bringing together experts from Wealth Management & Swiss Bank, Global Asset Management and the Investment Bank under one roof. IPS efficiently delivers high quality investment content and channels market and product ideas to our client advisors and clients in a prompt and efficient way, raising the quality of service for our Wealth Management clients.

We are committed to execution at the highest standards, ensuring consistent high-quality delivery to clients as well as within the firm. Furthermore, we are further developing our performance-oriented culture to help us to attract, develop and retain top industry talent. As part of this effort, we have introduced new performance review tools and processes that allow us to identify problem areas and to initiate corrective measures.
Board of Directors

1 Kaspar Villiger Chairman of the Board of Directors, Chairperson of the Corporate Responsibility Committee and Governance and Nominating Committee
2 Michel Demaré Independent Vice Chairman, member of the Audit Committee and Governance and Nominating Committee
3 Axel P. Lehmann Member of the Risk Committee
4 Rainer-Marc Frey Member of the Audit Committee and Risk Committee
5 Bruno Gehrig Member of the Governance and Nominating Committee and Human Resources and Compensation Committee
6 Ann F. Godbehere Member of the Audit Committee and Corporate Responsibility Committee
7 William G. Parrett Chairperson of the Audit Committee
8 Helmut Panke Ad-interim Chairperson of the Human Resources and Compensation Committee and member of the Risk Committee
9 Wolfgang Mayrhuber Member of the Corporate Responsibility Committee and Human Resources and Compensation Committee
10 David Sidwell Senior Independent Director, Chairperson of the Risk Committee
The Board of Directors (BoD) is our most senior body. Under the leadership of the Chairman, it determines the strategy of the Group based upon the recommendations of the Group Chief Executive Officer (Group CEO). It exercises ultimate supervision of management and is responsible for the appointment and dismissal of all Group Executive Board (GEB) members, the Company Secretary and the head of Group Internal Audit as well as supervising and setting appropriate risk management and control principles for the firm. With the exception of its current Chairman, Kaspar Villiger, all members of the BoD are independent.

Group Executive Board

1 Oswald J. Grübel  Group Chief Executive Officer
2 John Cryan  Group Chief Financial Officer and ad-interim Chairman and CEO of UBS Group Europe, Middle East & Africa
3 Markus U. Diethelm  Group General Counsel
4 John A. Fraser  Chairman and CEO of Global Asset Management
5 Maureen Miskovic  Group Chief Risk Officer
6 Chi-Won Yoon  co-Chairman and co-CEO of UBS Group Asia Pacific
7 Ulrich Körner  Group Chief Operating Officer and CEO of Corporate Center
8 Robert J. McCann  CEO of Wealth Management Americas
9 Luca Gähwiler  CEO of UBS Switzerland and co-CEO of Wealth Management & Swiss Bank
10 Carsten Kengeter  Chairman and CEO of the Investment Bank
11 Alexander Wilmot-Sitwell  co-Chairman and co-CEO of UBS Group Asia Pacific
12 Jürg Zeltner  CEO of UBS Wealth Management and co-CEO of Wealth Management & Swiss Bank
13 Philip J. Lofts  CEO of UBS Group Americas
Management of the firm is delegated by the BoD to the GEB. Under the leadership of the Group CEO, the GEB has executive management responsibility for the Group and its businesses. It assumes overall responsibility for the development of the Group and business division strategies and the implementation of approved strategies.

→ Refer to the “Corporate governance” section of this report for more information about the GEB.
The making of UBS

When, in 1998, the Union Bank of Switzerland and the Swiss Bank Corporation (SBC) merged to form UBS, they could look back on a long and illustrious history. By 1962, the Union Bank of Switzerland had already celebrated its 100th anniversary, as Bank in Winterthur, its first forebear, was founded in 1862. SBC passed its centenary in 1972, tracing its origins back to the Basler Bankverein founded in 1872. The historical roots of PaineWebber, acquired by UBS in 2000, go back to 1879, while S. G. Warburg, one of the major pillars upon which today’s Investment Bank was built, commenced operations in 1946, with its roots going back to 1934.

In the early 1990s, SBC and Union Bank of Switzerland were both commercial banks operating mainly out of Switzerland. The two banks shared a similar vision: to become a world leader in wealth management and a global bulge-bracket investment bank with a strong position in global asset management, while remaining an important commercial and retail bank in Switzerland.

Union Bank of Switzerland, the largest and best-capitalized Swiss bank of its time, opted to pursue a strategy of organic growth, or expansion by internal means. In contrast, SBC, then the third-largest Swiss bank, decided to take another route by starting a joint venture with O’Connor, a leading US derivatives firm that was fully acquired by SBC in 1992. O’Connor was noted for its young, dynamic and innovative culture, meritocracy and team-oriented approach. It brought state-of-the-art risk management and derivatives technology to SBC. In 1994, SBC acquired Brinson Partners, one of the leading US-based institutional asset management firms. Both the O’Connor and Brinson transactions represented fundamental steps in the development of the firm.

The next major move was in 1995, when SBC acquired S.G. Warburg, the British merchant bank. The deal helped SBC fill a strategic gap in corporate finance, brokerage and research and, most importantly, brought with it an institutional client franchise, which is still crucial to today’s equities business.

The 1998 combination of SBC and Union Bank of Switzerland into the firm we know today created a leading global wealth manager and improved the new firm’s prospects of becoming a global bulge-bracket investment bank and a leading global institutional asset manager.

Still, in order to become a truly global player in investment banking and wealth management, UBS needed to establish a significant presence in the United States. UBS advanced toward this objective when it acquired PaineWebber in 2000.

Since the acquisition of PaineWebber, UBS’s main priority has been to develop and grow organically, but smaller acquisitions have helped to accelerate and complement the firm’s growth. Today, UBS has significant scale in its areas of focus, with strong positions in large, mature markets as well as a growing presence in emerging markets.

Current market climate and industry drivers

The quest for greater systemic stability continues and its resilience has been tested once again by the euro crisis.

Emergence from the financial crisis amid continued uncertainties

Global growth accelerated in the first half of 2010, as companies restocked their inventories and improved consumer confidence kick-started spending. Monetary policies remained expansionary in nature given the continuing fragility of the economic recovery. Emerging economies exited the crisis relatively unscathed and with improved economic, financial and fiscal positions in comparison with developed economies. Re-leveraging started across emerging markets at a time when de-leveraging was the norm in most developed markets, and China overtook Japan as the biggest Asian economy.

Following turbulence in some emerging market bond markets earlier in the year, renewed macro concerns in the second half of 2010 largely revolved around European sovereign credit risks. At their November meeting in Seoul, G20 leaders failed to reconcile their differences with respect to exchange rate policy and the fiscal route map going forward, limiting their agreement to “indicative guidelines” on how to rein in current account imbalances.

Although re-regulation aimed at increasing the stability of the global financial system remained a major topic of discussion throughout the year, the G20 moved more slowly and cautiously than expected, mainly due to the differing views among members. The main achievement was the agreement on Basel III rules and the endorsement of the Financial Stability Board’s route map for the regulation of systemically important financial institutions.

Macro uncertainties continued to overshadow the guardedly optimistic banking sector fundamentals that appeared to be recovering faster than anticipated in the first half of 2010. Market conditions in the second half of 2010 deteriorated, particularly with respect to client activity levels and fixed income businesses. As the global economy readjusted to tempered growth, financial markets continued their rollercoaster ride. During 2010, the hoarding of cash, which resulted in record highs at the end of the crisis, had somewhat reversed.

Euro crisis

Europe’s sovereign debt crisis resulted in a major dip in confidence in the euro. The situation had its origins as much in the establishment and subsequent development of the common currency itself as in the effects of the financial market crisis. When the global recession struck in 2008, much of the debt accumulated mostly (but not exclusively) in the private sectors of some European Monetary Union (EMU) countries became unsustainable. The governments faced falling tax revenues, rising social outlays and costs for supporting their economies and their failing financial institutions. Public debt-to-gross domestic product (GDP) ratios in the EMU rose by around 20 percentage points on average. The weaker and most severely affected countries saw their annual public deficits swell to double-digit levels as a percentage of GDP. Holders of government bonds grew increasingly nervous about their investments, triggering today’s sovereign debt crisis in Europe.

The response to the Greek crisis included a EUR 110 billion rescue loan package to prevent a debt default, fiscal austerity measures to regain investors’ confidence and structural reforms to improve competitiveness. Defaulting and restructuring debt was not seriously considered for fear of spreading Greece’s problems to other high-debt/high-deficit countries and the western European banking sector.

The crisis flared up again in November – in Ireland. In contrast to Greece, Ireland’s fiscal profile had been among the soundest in the Eurozone. But low interest rates sparked a veritable credit binge and one of the world’s biggest housing bubbles, financed in large part by Irish banks. Since this bubble burst in 2008, the Irish banking system has been in serious disarray. Holders of Irish debt became increasingly nervous about the situation, and the country agreed to a loan program totaling EUR 85 billion.

The immediate market reaction to the Irish rescue package was anything but reassuring. In fact, the markets’ concern spread not only to the more obvious candidates like Portugal and Spain, but also to Italy, Belgium and even France. Only at the start of 2011 did a closing of ranks among the EU political leaders allow the containment of the immediate euro crisis, although the underlying fundamental issues remain.

Macroeconomic perspectives

The global recovery, while weak, appears to be increasingly self-sustaining. We believe that the global economy has the potential
to grow at between 3% and 4% in the medium term, a moderate rate of growth compared with previous recovery years. However, this global figure masks distinct regional discrepancies. The US is likely to show slower growth than during the period 1982–2007. Among the factors responsible for this are the de-leveraging of the private sector, re-regulation of financial intermediaries, the surge of public debt and the subsequent need to repair the public sector balance sheet. A subdued recovery remains the most likely US scenario as the stimulus-induced boom has come to a definite end. Generally, spare capacity in the western world will only be slowly re-absorbed, keeping inflation rates in most countries subdued (with the notable exception of the UK), while requiring further monetary easing, including via asset purchases (i.e. quantitative easing).

In Europe, we are seeing decoupling between regions as well as fragmentation within them. Germany and other northern European countries have benefited most from the global recovery and the euro’s depreciation, while the south is lagging behind and is under austerity pressure. This major divergence will likely continue to challenge the euro.

In Asia, some developments seem to flag potential risks, such as incipient asset bubbles in specific market segments and an acceleration of inflation in some countries. Most Asian countries have started to tighten their monetary and credit policies. Other large emerging markets (e.g. Brazil) can rely on robust domestic demand in order to maintain stable growth, though some risk of overheating exists as a result.

Industry drivers

A number of drivers have a significant impact on banks’ earnings as well as the structure of the financial services industry. The most relevant factor over the coming years will be the new business environment arising out of regulatory reform. This is likely to have far reaching and transformational consequences for markets, firm structures and business models.

➔ Refer to the “Regulatory developments” section for more information

Changing business models

Changes in regulation are expected to have a profound effect on banks’ business models. In view of the pressure that the new capital requirements and other regulatory principles, as stipulated by the Basel Committee and other bodies, will put on asset inventory-based future returns, the industry is currently reassessing its business portfolios and models. This is particularly true in the case of fixed income. However, structural changes are unlikely to happen in the short term.

Increasing role of emerging market banks

Emerging market banks came out of the global financial crisis in much better shape than their peers in developed markets, given their limited exposure to the US sub-prime market. As such, their capital position, on average, is already well above the Basel minimal requirement for 2019. Global emerging market banks are also strongly funded with deposits, which, together with a mostly supportive macro outlook, make them well positioned to capture future growth. In 2010, a number of emerging market countries enacted additional regulations for local banks. These include higher reserve requirements (China, India, Indonesia, and Turkey), more stringent provisioning (India, Indonesia and Mexico), compulsory lending (Korea), banking taxes (Hungary) and mortgage restrictions (China, Hong Kong, India, Malaysia, Poland and Thailand).

Demographics

The demographic dividend brought by a fall in child dependency and a rise in the share of the working population has been exhausted in western countries, and will soon be exhausted in a few developing countries (e.g. China). For most of the developing world this point lies 20–30 years ahead. Countries that have lost the demographic dividend will confront fiscal and social stresses from increases in the old age dependency ratio. In Japan, today there are 3.4 people working for every person over 65. By 2050, it is estimated the ratio will be 1.3. In Western Europe the ratio would fall from nearly four to two. Many pension funds – particularly pay-as-you-go public pensions – are underfunded, leaving many with insufficient retirement income. As baby-boomers retire, they will roll over trillions of assets from defined contribution plans and individual retirement accounts to other accounts. The need for stable income will increase the demand for fixed income investments and target date funds.
Regulatory developments

Banking sector re-regulation remained high on the agenda throughout 2010. The pace of regulatory reform often varies among countries, raising the prospect of an uneven playing field among banks. Regulatory reforms will have a significant impact on capital levels, future revenue and earnings, and ultimately investment returns for the banking sector as a whole. In particular, the impact will be felt in certain business areas, such as fixed income.

Global capital and liquidity standard – Basel III

The enhanced Basel II framework (increased weighting of market risks) and Basel III capital requirements mandate that banking businesses will have to be underpinned by a higher quantity and quality of capital going forward. The definition of core tier 1 capital (common equity) will be more restrictive. Risk-weighted assets (RWA) will rise significantly, notably at banks with large trading portfolios, due to the introduction of additional charges as well as increased calibration percentages. It will take some time to implement fully the Basel reforms and global standards, and, as a result, the focus is on local regulations and their comparison. It is apparent that the pace of regulatory change varies considerably from country to country, and it is likely that there will be different rules in different jurisdictions.

On 26 July 2010, the Group of Governors and Heads of Supervision, the oversight body of the Basel Committee on Banking Supervision (BCBS), reached a broad agreement on the overall design of the capital and liquidity reform package proposed by the Basel Committee. On 12 September 2010, proposed strengthened capital requirements as well as the introduction of a global liquidity standard were announced.

On 16 December, the BCBS followed up with the publication of four comprehensive documents. The new proposed rules seek to strengthen the banking sector’s resilience under financial and economic stress, improve risk management and governance and enhance transparency. Also, guidance on the countercyclical capital buffer was provided for national authorities (up to 2.5% in the form of common equity), which aims to protect the banking sector from periods of excess aggregate credit growth. On 13 January 2011, the BCBS followed up with additional criteria for tier 1 and tier 2 capital to ensure that all classes of capital absorb losses at the point of non-viability.

The minimum common equity tier 1 ratio will be 4.5%, the minimum tier 1 capital ratio 6% and the minimum total capital ratio 8%. In addition, banks will be required to hold a capital conservation buffer of 2.5% and a countercyclical buffer of up to 2.5% in the form of common equity to withstand future periods of stress. Therefore the total capital requirement including buffers amounts 10.5–13%. These requirements will be phased-in from 2013 to the end of 2018. The risk-based capital requirements are supplemented by a tier 1 leverage ratio of 3% that will be tested from 2013 to 2016, with a view to perform a final calibration and implementation as of 1 January 2018.

Regarding liquidity, the BCBS proposes two metrics: the liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR). Both the LCR and the NSFR will be subject to an observation period and will include a review clause to address any unintended consequences. Observation periods for the LCR and NSFR will start in 2011 and 2012, with minimum standards to be introduced in 2015 and 2018, respectively. The two ratios are conceptually in line with our internal frameworks. The LCR is broadly consistent with the metric in the liquidity regime as introduced by the Swiss Financial Market Supervisory Authority (FINMA) and the Swiss National Bank (SNB) as of mid 2010.

Basel II market risk framework

Further to the publication of the enhanced Basel II market risk framework in July 2009, the BCBS has issued certain adjustments to the revision in June 2010. For a transition period of two years, the capital charges for non-correlation trading securitization positions may be based on the larger of the capital charges for net long and net short positions instead of the sum of net long and net short positions. Also, for correlation trading securitization positions, banks applying an internally developed model are subject to a floor of at least 8% of the capital charge for specific risk according to the standardized measurement method. Finally, the BCBS agreed to a coordinated start-date of not later than 31 December 2011.

➔ Refer to the “Treasury management” section of our 2009 Annual Report for the 2009 developments of the Basel II market risk framework

Systemically important financial institutions

Regulatory attention is clearly focused on the question of systemically important financial institutions. However, at present, an i-
ternationally agreed framework does not exist. The Financial Stability Board, in cooperation with the BCBS and national authorities, is expected to provide more detail over the course of 2011 according to the roadmap submitted to the G20 leaders in November 2010. Examples of measures include more demanding capital and liquidity rules and resolution frameworks to ensure that all financial institutions can be dissolved without destabilizing the system and without exposing taxpayers to the risk of loss. They also include a cross-border coordination framework and more intense supervisory oversight.

Swiss Commission of Experts on “Too big to fail” and public consultation

Of special relevance for UBS is the “too big to fail” discussion in Switzerland. On 4 October 2010, the Commission of Experts appointed by the Swiss Federal Council presented its final report, proposing measures to be applied to systemically relevant banks, with recommendations for increased capital requirements (including a leverage ratio) and organizational measures aimed at safeguarding the continuation of important Swiss banking services at the point of a bank’s non-viability. These measures are supplemented by strict liquidity requirements and a limitation of interdependencies and concentration risks in the financial sector. The proposals include:

1. Capital: Common equity of at least 10% of RWA and additional capital equivalent instruments (contingent convertibles [CoCos]) of 9% of RWA. The CoCos would automatically convert into common equity in the event that the capital ratios of the issuing bank fall below certain pre-defined thresholds (trigger levels). Of the 9% capital equivalent instruments, the Commission of Experts recommended that 3% consist of CoCos with a trigger at a 7% common equity capital ratio. Alternatively, this 3% may also be held in the form of common equity. The remaining 6% would be issued as CoCos with a lower trigger, set at a 5% common equity capital ratio. This progressive component would be variable, based on the bank’s degree of systemic importance, and depend on market share in Swiss systemic functions and total balance sheet size of the bank. These proposed capital requirements exceed the proposed Basel III minimum standards. The calibration of the three components was based on the assumption that RWA would increase to approximately CHF 400 billion under Basel III. The 6% progressive component, calibrated as at the end of 2009, is based on a balance sheet total of approximately CHF 1,500 billion and a market share of around 20%. Furthermore, the Commission recommended a leverage ratio (minimum capital level as a proportion of the balance sheet) as an additional capital rule. The timeframe for the implementation of the Swiss capital requirements is the same as it is for the Basel III standards.

2. Liquidity: Proposals concerning liquidity requirements largely correspond to the FINMA principles that were effective as of 30 June 2010. It has been proposed that the agreed-upon FINMA principles should be given legal form. The FINMA liquidity regulations require banks to hold a balance of highly liquid assets sufficient to offset the projected outflows under the stress scenario for a period of 30 days. Similar to the FINMA liquidity regime, our established internal liquidity stress tests consider a severe stress scenario. We believe that our internal model enables us to sustain our business in stress conditions for a period substantially beyond the minimum regulatory horizon.

3. Risk diversification: The measures presented by the Commission to improve risk diversification are similar to the adjustments envisaged in other jurisdictions, notably the European Union. One objective of these measures is to reduce the degree of interconnectedness within the banking sector, and thus limit the dependence of other banks on systemically important banks.

4. Organization: The Commission stressed that it is the responsibility of a systemically important bank to organize itself in such a way that maintenance of the Swiss systemically important functions would be guaranteed in the event of a crisis. No specific structural measures were recommended by the Commission for systemically important banks.

On 22 December 2010, the Swiss Federal Council launched a consultation on the “too big to fail” legislative proposals. The draft contains the measures recommended by the Commission of Experts which form the heart of the proposals. There were two additional elements compared with the Commission’s final report: (i) proposed legal changes to grant tax relief for the Swiss capital market, and (ii) a paragraph that empowers the Federal Council to rule on variable compensation for bank employees in case of future government support for a bank. The consultation is scheduled to end on 23 March 2011 and, after consolidation, the papers will enter the parliamentary process with a view to conclude the debate in 2011. The Swiss administration took strides to further clarify the measures stipulated by the Commission, while the abovementioned four main pillars remained in place.

The revised legislation would require each systemically relevant institution such as UBS to develop a plan to ensure the continuation of systemically relevant functions within Switzerland in the event that the institution approaches insolvency. It would empower FINMA to impose far-reaching structural changes, including among other things the separation of lines of business into separate legal entities and restrictions on intra-group funding and guarantees, should any such institution be deemed to have failed to develop an adequate plan.
**Regulatory developments in other jurisdictions**

Other notable regulatory initiatives include the Dodd-Frank Wall Street Reform and Consumer Protection Act in the US, which impacts the financial services industry by addressing, among other issues, systemic risk oversight, bank capital standards, the liquidation of failing systemically significant financial institutions, over-the-counter derivatives, the ability of deposit-taking banks to engage in proprietary trading activities and invest in hedge funds and private equity (the so-called Volcker rule), consumer and investor protection, securitization, investment advisors, shareholder “say on pay,” the role of credit-rating agencies, and more. The details of these regulations will depend on the final regulations ultimately adopted by various agencies and oversight boards in 2011.

The European Commission ran a consultation on technical details of a possible EU framework for bank recovery and resolution until 3 March 2011. The Commission intends to proceed gradually towards a comprehensive EU framework for troubled and failing banks in the following phases: legislative proposal for a harmonized EU regime for crisis prevention and bank recovery and resolution; further harmonization of bank insolvency regimes; and creation of an integrated resolution regime. The consultation paper runs through the lifecycle of a financial institution, detailing conditions for prevention, early intervention and resolution.

The landscape for banking in the UK will be shaped by the findings of the Independent Commission on Banking (ICB), which was tasked with finding ways to promote financial stability and competition, and is expected to publish an interim report in spring before submitting its final report in September 2011. The UK re-emphasized its “living will” instrument and, after having assessed documents established by six pilot banks, rolled out a comprehensive list of required items in phase two. The regulations include a bridge bank tool for deposit-taking banks and a special administration regime that focuses on the recovery or wind-down of the whole group in the case of investment banks. The UK government’s proposed bank levy is intended to encourage banks to move to less risky forms of funding. The levy will not become law until later in 2011 but it is proposed to take effect from 1 January 2011. Having applied the draft legislation to UBS’s 31 December 2010 balance sheet position, we estimate that the levy would result in a charge of approximately CHF 75 million to 100 million per annum.
Risk factors

Certain risks, including those described below, may impact our ability to execute our strategy and directly affect our business activities, financial condition, results of operations and prospects. Because the business of a broad-based international financial services firm such as UBS is inherently exposed to risks that only become apparent with the benefit of hindsight, risks of which we are not presently aware could also materially affect our business activities, financial condition, results of operations and prospects. The sequence in which the risk factors are presented below is not indicative of their likelihood of occurrence or the potential magnitude of their financial consequences.

Regulatory changes may adversely affect our business and ability to execute our strategic plans

In the wake of the recent financial crisis, regulators and legislators have proposed and adopted, or continue to actively consider, a wide range of measures designed to address the perceived causes of the crisis and to limit the systemic risks posed by major financial institutions. These measures include:
- significantly higher regulatory capital requirements
- changes in the definition and calculation of regulatory capital, including in the capital treatment of certain capital instruments issued by UBS and other banks
- changes in the calculation of risk-weighted assets
- new or significantly enhanced liquidity requirements
- requirements to maintain liquidity and capital in multiple jurisdictions where activities are conducted
- limitations on principal trading activities
- limitations on risk concentrations and maximum levels of risk
- taxes and government levies that would effectively limit balance sheet growth
- a variety of measures constraining, taxing or imposing additional requirements relating to compensation
- requirements to adopt structural and other changes designed to reduce systemic risk and to make major financial institutions easier to wind down or disassemble
- outright size limitations

A number of measures have been adopted (or in the case of Basel III, the framework established) and will be implemented in the next several years, or in some cases are subject to legislative action or to further rulemaking by regulatory authorities before final implementation. As a result, there is a high level of uncertainty regarding a number of the measures described above. The timing and implementation of changes could have a material and adverse effect on our business.

Notwithstanding attempts by regulators to coordinate their efforts, the proposals differ by jurisdiction and therefore enhanced regulation may be imposed in a manner that makes it more difficult to manage a global institution. The absence of a coordinated approach is also likely to disadvantage certain banks, such as UBS, as they attempt to compete with less strictly regulated peers based in other jurisdictions.

Swiss authorities have expressed concern about the systemic risks posed by the two largest Swiss banks, particularly in relation to the size of the Swiss economy and governmental resources. Swiss regulatory change efforts are generally proceeding more quickly than those in other major jurisdictions, and the Swiss Financial Market Supervisory Authority (FINMA), the Swiss National Bank (SNB) and the Swiss Federal Council have proposed requirements that would be more onerous and restrictive for major Swiss banks, such as UBS, than those adopted, proposed or publicly espoused by regulatory authorities in other major global banking centers. Following the July 2010 announcement of the broad agreement reached by the Basel Committee on Banking Supervision on total risk-based capital requirements amounting to 10.5%, the Commission of Experts appointed by the Swiss Federal Council issued a report in October 2010 recommending total risk-based capital of 19% for the two big Swiss banks. The measures recommended by the Commission of Experts, which also included requirements designed to reduce interconnectedness in the banking sector and organizational requirements, have now been incorporated into legislative proposals that are scheduled to be considered in 2011 by the Swiss Parliament. The organizational measures included in the draft legislation would require each systemically relevant institution to develop a plan to ensure the continuation of systemically relevant functions within Switzerland, in the event that the institution approaches insolvency. It would empower FINMA to impose more far-reaching structural changes, such as the separation of lines of business into dedicated legal entities and restrictions on intra-group funding and guarantees, should any institution be deemed to have failed to develop an adequate plan. Senior Swiss regulatory officials have made public statements suggesting that broader structural changes of this kind should be adopted or at least seriously considered by the two big Swiss banks in any event.

This may lead to more burdensome regulations applicable to major banks headquartered in Switzerland in comparison with those based elsewhere. The potential regulatory and legislative developments in Switzerland and in other jurisdictions in which we have operations may have a material adverse effect on our ability to execute our strategic plans, on the profitability or viability of certain business lines globally or in particular locations, and on our ability to compete with other financial institutions. They could also have an impact on our legal structure or our business model.
Our reputation is critical to the success of our business

Damage to our reputation can have fundamental negative effects on our business and prospects. As the events of the past few years have demonstrated, our reputation is critical to the success of our strategic plans. Reputational damage is difficult to reverse. The process is slow and success can be difficult to measure. This was demonstrated in recent years as our very large losses during the financial crisis, the US cross-border matter and other matters seriously damaged our reputation. This was an important factor in our loss of clients and client assets across our asset-gathering businesses, and to a lesser extent in our loss of and difficulty in attracting staff. These developments had short-term and also more lasting adverse effects on our financial performance. We recognized that restoring our reputation would be essential to maintaining our relationships with clients, investors, regulators and the general public, as well as with our employees. Although there is evidence that the steps we have taken in the past couple of years to restore our reputation have been effective, our reputation has not been fully restored, and we remain vulnerable to the risk of further reputational damage. Any further reputational damage could have a material adverse effect on our operational results and financial condition and on our ability to achieve our strategic goals and financial targets.

Our capital strength is important in supporting our client franchise; changes in capital requirements are likely to constrain certain business activities in our Investment Bank

Our capital position, as measured by the BIS tier 1 and total capital ratios, is determined by (i) risk-weighted assets (RWA) (balance sheet, off-balance sheet and other market and operational risk positions, measured and risk-weighted according to regulatory criteria) and (ii) eligible capital. Both RWA and eligible capital are subject to change. Eligible capital would be reduced if we experience net losses, as determined for the purpose of the regulatory capital calculation. Eligible capital can also be reduced for a number of other reasons, including certain reductions in the ratings of securitization exposures, adverse currency movements directly affecting the value of equity and prudential adjustments that may be required due to the valuation uncertainty associated with certain types of positions. RWA, on the other hand, are driven by our business activities and by changes in the risk profile of our exposures. For instance, substantial market volatility, a widening of credit spreads (the major driver of our value-at-risk), a change in regulatory treatment of certain positions, adverse currency movements, increased counterparty risk or a deterioration in the economic environment could result in a rise in RWA. Any such reduction in eligible capital or increase in RWA could potentially reduce our capital ratios, and such reductions could be material.

The required levels and calculation of our regulatory capital and the calculation of our RWA are also subject to changes in regulatory requirements or the interpretation thereof.

We are subject to regulatory capital requirements imposed by FINMA, under which we have higher RWA than would be the case under BIS guidelines. Forthcoming changes in the calculation of RWA under Basel III and FINMA requirements will significantly increase the level of our RWA and therefore have an adverse effect on our capital ratios. We have identified steps that we can take to mitigate the effects of the changes in the RWA calculation, but there is a risk that we will not be successful in doing so, either because we are unable to carry out fully the actions we have planned or because other business or regulatory developments counteract the benefit of these mitigating steps. We have also announced that we intend to build our capital base by retaining earnings and by not paying dividends either in 2010 or for some time to come, but there is a risk that we will not have sufficient earnings to increase the level of our capital as quickly as we have planned or as may be necessary to satisfy new capital requirements.

In addition to the risk-based capital requirements, FINMA has introduced a minimum leverage ratio, which must be achieved by 1 January 2013 at the latest. The leverage ratio operates separately from the risk-based capital requirements, and accordingly under certain circumstances could constrain our business activities even if we are able to satisfy the risk-based capital requirements.

Changes in the Swiss requirements for risk-based capital or leverage ratios, whether pertaining to the minimum levels required for large Swiss banks or to the calculation thereof (including changes made to implement the recent recommendations of the Swiss Commission of Experts), could have a material adverse effect on our business and ability to execute our strategic plans or pay dividends in the future. This is particularly the case if our plans to take mitigating actions to reduce risk-weighted assets and to satisfy future capital requirements through retained earnings are not successful. Moreover, changes in the calculation and level of capital requirements, coupled in some cases with other regulatory changes, are likely to render uneconomic certain capital-intensive businesses conducted in our Investment Bank, or to make their effective returns so low that they might no longer be viable. If some business activities of the Investment Bank are significantly reduced or discontinued, this could adversely affect our competitive position, particularly if competitors are subject to different requirements under which those activities would remain sustainable.

We hold risk positions that may be adversely affected by conditions in the financial markets

UBS, like other financial market participants, was severely affected by the financial crisis that began in 2007. The deterioration of financial markets since the beginning of the crisis was extremely severe by historical standards, and we recorded substantial losses on fixed income trading positions, particularly in 2008 and to a lesser extent in 2009. We have drastically reduced our risk exposures from 2008 through 2010, in part through transfers in 2008 and 2009 to a fund controlled by the Swiss National Bank. We do, however, continue to hold legacy risk positions that are exposed to the general systemic and counterparty risks that were exacerbated by the financial crisis.
The continued illiquidity of most of these legacy risk positions makes it increasingly difficult to reduce our legacy risk exposures.

During the financial crisis, we incurred large losses (realized and mark to market) on our holdings of securities related to the US residential mortgage market. Although our exposure to that market was reduced dramatically from 2008 through 2010, we remain exposed to a smaller degree to such losses, most notably through monoline-insured positions.

The financial crisis also caused market dislocations that affected, and to a degree still affect, other asset classes. In 2008 and 2009, we recorded mark-downs on other assets carried at fair value, including auction rate securities (ARS), leveraged finance commitments, commercial mortgages in the US and non-US mortgage-backed and asset-backed securities (ABS). We have a very large inventory of ARS which is subject to changes in market values. The portion of our ARS inventory that has been reclassified as loans and receivables is subject to possible impairment due to changes in market interest rates and other factors. We hold positions related to real estate in countries other than the US, including a very substantial Swiss mortgage portfolio, and we could suffer losses on these positions. In addition, we are exposed to risk in our prime brokerage, reverse repo and lombard lending activities, as the value or liquidity of the assets against which we provide financing may decline rapidly.

Performing in the financial services industry depends on the economic climate

The financial services industry prospers in conditions of economic growth, stable geopolitical conditions, transparent, liquid and buoyant capital markets and positive investor sentiment. An economic downturn, inflation or a severe financial crisis (as seen in the last few years) can negatively affect our revenues and ultimately our capital base.

A market downturn can be precipitated by a number of factors, including geopolitical events, changes in monetary or fiscal policy, trade imbalances, natural disasters, pandemics, civil unrest, war or terrorism. Because financial markets are global and highly interconnected, even local and regional events can have widespread impacts well beyond the countries in which they occur. A crisis could develop, regionally or globally, as a result of disruptions in emerging markets which are susceptible to macroeconomic and political developments, or as a result of the failure of a major market participant. We have material exposures to certain emerging market economies, both as a wealth manager and as an investment bank.

As our presence and business in emerging markets increases, and to a degree still affect, other asset classes. In 2008 and 2009, we recorded mark-downs on other assets carried at fair value, including auction rate securities (ARS), leveraged finance commitments, commercial mortgages in the US and non-US mortgage-backed and asset-backed securities (ABS). We have a very large inventory of ARS which is subject to changes in market values. The portion of our ARS inventory that has been reclassified as loans and receivables is subject to possible impairment due to changes in market interest rates and other factors. We hold positions related to real estate in countries other than the US, including a very substantial Swiss mortgage portfolio, and we could suffer losses on these positions. In addition, we are exposed to risk in our prime brokerage, reverse repo and lombard lending activities, as the value or liquidity of the assets against which we provide financing may decline rapidly.

Performance in the financial services industry depends on the economic climate

The financial services industry prospers in conditions of economic growth, stable geopolitical conditions, transparent, liquid and buoyant capital markets and positive investor sentiment. An economic downturn, inflation or a severe financial crisis (as seen in the last few years) can negatively affect our revenues and ultimately our capital base.

A market downturn can be precipitated by a number of factors, including geopolitical events, changes in monetary or fiscal policy, trade imbalances, natural disasters, pandemics, civil unrest, war or terrorism. Because financial markets are global and highly interconnected, even local and regional events can have widespread impacts well beyond the countries in which they occur. A crisis could develop, regionally or globally, as a result of disruptions in emerging markets which are susceptible to macroeconomic and political developments, or as a result of the failure of a major market participant. We have material exposures to certain emerging market economies, both as a wealth manager and as an investment bank.

As our presence and business in emerging markets increases, and as our strategic plans depend more heavily upon our ability to generate growth and revenue in the emerging markets, we become more exposed to these risks. The bond market dislocations affecting the sovereign debt of certain European countries, particularly in 2010, demonstrate that such developments even in more developed markets can have similarly unpredictable and destabilizing effects. Adverse developments of these kinds have affected our businesses in a number of ways, and may continue to have further adverse effects on our businesses as follows:

- a general reduction in business activity and market volumes would affect fees, commissions and margins from market-making and client-driven transactions and activities;
- a market downturn is likely to reduce the volume and valuation of assets we manage on behalf of clients, reducing our asset- and performance-based fees;
- reduced market liquidity limits trading and arbitrage opportunities and impedes our ability to manage risks, impacting both trading income and performance-based fees;
- assets we own and account for as investments or trading positions could fall in value;
- impairments and defaults on credit exposures and on trading and investment positions could increase, and losses may be exacerbated by falling collateral values; and
- if individual countries impose restrictions on cross-border payments or other exchange or capital controls, we could suffer losses from enforced default by counterparties, be unable to access our own assets, or be impeded in – or prevented from – managing our risks.

Because UBS has very substantial exposures to other major financial institutions, the failure of any such institution could have a material effect on UBS.

The developments mentioned above can materially affect the performance of our business units and of UBS as a whole. There is also a related risk that the carrying value of goodwill of a business unit might suffer impairments and deferred tax assets levels may need to be adjusted.

Our global presence subjects us to risk from currency fluctuations

We prepare our consolidated financial statements in Swiss francs. However, a substantial portion of our assets, liabilities, invested assets, revenues and expenses are denominated in other currencies, particularly the US dollar, the euro and the British pound. Accordingly, changes in foreign exchange rates, particularly between the Swiss franc and the US dollar (US dollar revenue represents the major part of our non-Swiss franc revenue) have an effect on our reported income and invested asset levels. During 2010, a strengthening of the Swiss franc, especially against the US dollar and euro, had an adverse effect on our revenues and invested assets. Since exchange rates are subject to constant change, sometimes from completely unpredictable reasons, our results are subject to risks associated with changes in the relative values of currencies.

We are dependent upon our risk management and control processes to avoid or limit potential losses in our trading and counterparty credit businesses

Controlled risk-taking is a major part of the business of a financial services firm. Credit is an integral part of many of our retail, wealth management and Investment Bank activities. This includes
lending, underwriting and derivatives businesses and positions. Changes in interest rates, credit spreads, equity prices, foreign exchange levels and other market fluctuations can adversely affect our earnings. Some losses from risk-taking activities are inevitable, but to be successful over time, we must balance the risks we take against the returns we generate. We must therefore diligently identify, assess, manage and control our risks, not only in normal market conditions but also as they might develop under more extreme (stressed) conditions, when concentrations of exposures can lead to severe losses.

As seen during the recent market crisis, we are not always able to prevent serious losses arising from extreme or sudden market events that are not anticipated by our risk measures and systems. Value-at-risk, a statistical measure for market risk, is derived from historical market data, and thus by definition could not have predicted the losses seen in the stressed conditions during the financial crisis. Moreover, stress loss and concentration controls and the dimensions in which we aggregate risk to identify potentially highly correlated exposures proved to be inadequate. Notwithstanding the steps we have taken to strengthen our risk management and control framework, we could suffer further losses in the future if, for example:

- we do not fully identify the risks in our portfolio, in particular risk concentrations and correlated risks;
- our assessment of the risks identified or our response to negative trends proves to be inadequate or incorrect;
- markets move in ways that we do not expect – in terms of their speed, direction, severity or correlation – and our ability to manage risks in the resultant environment is therefore affected;
- third parties to whom we have credit exposure or whose securities we hold for our own account are severely affected by events not anticipated by our models, and we accordingly suffer defaults and impairments beyond the level implied by our risk assessment; or
- collateral or other security provided by our counterparties proves inadequate to cover their obligations at the time of their default.

We also manage risk on behalf of our clients in our asset and wealth management businesses. Our performance in these activities could be harmed by the same factors. If clients suffer losses or the performance of their assets held with us is not in line with relevant benchmarks against which clients assess investment performance, we may suffer reduced fee income and a decline in assets under management or withdrawal of mandates.

If we decide to support a fund or another investment that we sponsor in our asset or wealth management business (such as the property fund to which Wealth Management & Swiss Bank has exposure), we might, depending on the facts and circumstances, incur charges that could increase to material levels.

Investment positions, such as equity holdings made as a part of strategic initiatives and seed investments made at the inception of funds that we manage, may also be affected by market risk factors. These investments are often not liquid and are generally intended or required to be held beyond a normal trading horizon. They are subject to a distinct control framework. Depreciations in the fair value of these positions would have a negative impact on our earnings.

**Valuations of certain assets rely on models. For some of the inputs to these models there is no observable source**

Where possible, we mark our trading book assets at their quoted market price in an active market. Such price information may not be available for certain instruments and we therefore apply valuation techniques to measure such instruments. Valuation techniques use “market observable inputs” where available, derived from similar assets in similar and active markets, from recent transaction prices for comparable items or from other observable market data. In the case of positions for which some or all of the reference data are not observable or have limited observability, we use valuation models with non-market observable inputs. There is no single market standard for valuation models of this type. Such models have inherent limitations; different assumptions and inputs would generate different results, and these differences could have a significant impact on our financial results. We regularly review and update our valuation models to incorporate all factors that market participants would consider in setting a price, including factoring in current market conditions. Judgment is an important component of this process. Changes in model inputs or in the models themselves, or failure to make the changes necessary to reflect evolving market conditions, could have a material adverse effect on our financial results.

**We are exposed to possible further reduction in client assets in our wealth management and asset management businesses**

In 2008 and 2009, we experienced substantial net outflows of client assets in our wealth management and asset management businesses. Our wealth management businesses continued to experience net outflows in the first half of 2010, albeit at significantly reduced levels. The net outflows resulted from a number of different factors, including our substantial losses, the damage to our reputation, the loss of client advisors, difficulty in recruiting qualified client advisors and developments concerning our cross-border private banking business. Some of these factors have been successfully addressed, but others, such as the long-term changes affecting the cross-border private banking business model, will continue to affect client flows for an extended period of time. If we again experience material net outflows of client assets, the results of our wealth management and asset management businesses are likely to be adversely affected.

**Liquidity and funding management are critical to our ongoing performance**

Reducions in our credit ratings can increase our funding costs, in particular with regard to funding from wholesale unsecured
sources, and can affect the availability of certain kinds of funding. In addition, as we experienced in 2008 and 2009, ratings downgrades can require us to post additional collateral or make additional cash payments under master trading agreements relating to our derivatives businesses. Our credit ratings also contribute, together with our capital strength and reputation, to maintaining client and counterparty confidence.

A substantial part of our liquidity and funding requirements is met using short-term unsecured funding sources, including wholesale and retail deposits and the regular issuance of money market securities. The volume of these funding sources has generally been stable, but could change in the future due, among other things, to general market disruptions. Any such change could occur quickly.

Due to recent changes in Swiss regulatory requirements, and due to liquidity requirements imposed by certain jurisdictions in which we operate, we have been required to maintain substantially higher levels of liquidity overall than had been our usual practice in the past. Like increased capital requirements, higher liquidity requirements make certain lines of business, particularly in the Investment Bank, less attractive and may reduce our overall ability to generate profits.

Operational risks may affect our business

All of our businesses are dependent on our ability to process a large number of complex transactions across multiple and diverse markets in different currencies, and to comply with the requirements of the many different legal and regulatory regimes to which we are subject. Our operational risk management and control systems and processes are designed to help ensure that the risks associated with our activities, including those arising from process error, failed execution, unauthorized trading, fraud, system failures and failure of security and physical protection, are appropriately controlled. If our internal controls fail or prove ineffective in identifying and remedying such risks, we could suffer operational failures that might result in material losses.

Legal claims and regulatory risks and restrictions arise in the conduct of our business

Due to the nature of our business, we are subject to regulatory oversight and liability risk. We are involved in a variety of claims, disputes, legal proceedings and government investigations in jurisdictions where we are active. These types of proceedings expose us to substantial monetary damages and legal defense costs, injunctive relief and criminal and civil penalties, in addition to potential regulatory restrictions on our businesses. The outcome of these matters cannot be predicted and they could adversely affect our future business. We continue to be subject to government inquiries and investigations, and are involved in a number of litigations and disputes, many of which arose out of the financial crisis. These matters concern, among other things, our valuations, accounting classifications, disclosures, writedowns and contractual obligations. We are also subject to potentially material exposure in connection with claims relating to US RMBS and mortgage loan sales, the Madoff investment fraud, Lehman principal protection notes and other matters.

We have been in active dialogue with our regulators concerning the remedial actions that we are taking to address deficiencies in our risk management and control, funding and certain other processes and systems. We continue to be subject to increased scrutiny by FINMA and our other major regulators, and accordingly are subject to regulatory measures that might affect the implementation of our strategic plans.

We might be unable to identify or capture revenue or competitive opportunities, or retain and attract qualified employees

The financial services industry is characterized by intense competition, continuous innovation, detailed (and sometimes fragmented) regulation and ongoing consolidation. We face competition at the level of local markets and individual business lines, and from global financial institutions that are comparable to UBS in their size and breadth. Barriers to entry in individual markets are being eroded by new technology. We expect these trends to continue and competition to increase in the future.

Our competitive strength and market position could be eroded if we are unable to identify market trends and developments, do not respond to them by devising and implementing adequate business strategies or are unable to attract or retain the qualified people needed to carry them out. The changes recently introduced in our balance sheet management, funding framework and risk management and control, as well as possible new or enhanced regulatory requirements, may constrain the revenue contribution of certain lines of business. For example, parts of the Investment Bank’s fixed income, currencies and commodities business may be affected as they require substantial funding and are capital-intensive.

The amount and structure of our employee compensation are affected not only by our business results but also by competitive factors and regulatory guidance. Constraints on the amount of employee compensation, higher levels of deferral and claw-backs and performance conditions may adversely affect our ability to retain and attract key employees, and may in turn negatively affect our business performance. For the performance years 2009 and 2010, the portion of variable compensation granted in the form of deferred shares was much higher than in the past, and the percentage of compensation deferred was higher than that of many of our competitors. We continue to be subject to the risk that key employees will be attracted by competitors and decide to

➔ Refer to “Note 21 Provisions and contingent liabilities” in the “Financial information” section of this report for more information on legal proceedings and regulatory matters
leave UBS, or that we may be less successful than our competitors in attracting qualified employees. Although changes in regulatory requirements and pressure from regulators and other stakeholders affect not only UBS but also the other major international banks, the constraints and pressures differ by jurisdiction, and this may give some of our peers a competitive advantage.

**We are exposed to risks arising from the different regulatory, legal and tax regimes applicable to our global businesses**

We operate in more than 50 countries, earn income and hold assets and liabilities in many different currencies and are subject to many different legal, tax and regulatory regimes. Our ability to execute our global strategy depends on obtaining and maintaining local regulatory approvals. This includes the approval of acquisitions or other transactions and the ability to obtain and maintain the necessary licenses to operate in local markets. Changes in local tax laws or regulations and their enforcement may affect the ability or the willingness of our clients to do business with the bank, or the viability of our strategies and business model.

**The effects of taxes on our financial results are significantly influenced by changes in our deferred tax assets and final determinations on audits by tax authorities**

The deferred tax assets we have recognized on our balance sheet as of 31 December 2010 in respect of prior years’ tax losses are based on profitability assumptions over a five-year horizon. If the business plan earnings and assumptions in future periods substantially deviate from the current outlook, the amount of deferred tax assets may need to be adjusted in the future. This could include write-offs of deferred tax assets through the income statement if actual results come in substantially below the business plan forecasts and/or if future business plan forecasts are substantially revised downwards.

In the coming years, our effective tax rate will be highly sensitive both to our performance and to the development of new business plan forecasts. Currently unrecognized deferred tax assets in the UK and especially the US could be recognized if our actual and forecasted performance in those countries is strong enough to justify further recognition of deferred tax assets under the governing accounting standard. Our results in recent periods have demonstrated that changes in the recognition of deferred tax assets can have a very significant effect on our reported results. If, for example, the Group’s performance in the UK and especially in the US is strong, we could be expected to write up additional US and/or UK deferred tax assets in the coming years. The effect of doing so would reduce the Group’s effective tax rate, possibly to zero or below. Conversely, if our performance in those countries does not justify additional deferred tax recognition, but nevertheless supports our maintaining current deferred tax levels, we expect the Group’s effective tax rate to be in the range of 20% or slightly higher.

Additionally, the final effect of income taxes we accrue in the accounts is often only determined after the completion of tax audits (which generally takes a number of years) or the expiry of statutes of limitations. In addition, changes to, and judicial interpretation of, tax laws or policies and practices of tax authorities could cause the amount of taxes ultimately paid by UBS to materially differ from the amount accrued.
Financial performance

Our performance is reported in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. This section provides a discussion and analysis of our results for 2010, commenting on the underlying operational performance of the business, with a focus on continuing operations.

Key factors affecting our financial position and results of operations in 2010

- In 2010, we generated a net profit attributable to UBS shareholders of CHF 7.5 billion, a significant improvement over the net loss of CHF 2.7 billion in 2009. This increase was primarily due to a significant improvement in fixed income, currencies and commodities revenues from a loss in 2009. In addition, a reduction in credit loss expense, as well as significantly lower own credit losses on financial liabilities designated at fair value supported the result. Operating expenses were slightly lower than in 2009, when we recorded higher restructuring costs and a goodwill impairment charge related to the sale of UBS Pactual. Further, we reduced fixed costs excluding bonus and significant non-recurring items to CHF 19.9 billion in 2010, in line with our communicated target of below CHF 20 billion, despite increased costs for litigation provisions compared with 2009. Diluted earnings per share were CHF 1.96 in 2010, compared with negative CHF 0.75 in 2009.

- We recognized a net income tax benefit of CHF 381 million for 2010. This mainly reflects the recognition of additional deferred tax assets in respect of losses and temporary differences in a number of foreign locations, taking into account updated forecast taxable profit assumptions over the five-year horizon used for recognition purposes. This was partly offset by a Swiss net deferred tax expense as Swiss tax losses for which deferred tax assets have previously been recognized were used against profits for the year, which was itself partly offset by an upward revaluation of Swiss deferred tax assets taking into account revised forecast profit assumptions. In 2009, the net income tax benefit was CHF 443 million.

- During 2010, we incurred net restructuring charges of CHF 113 million compared with CHF 791 million in 2009.

- Other comprehensive income attributable to UBS shareholders was negative CHF 1,659 million in 2010 due to: (1) losses in the currency translation account of CHF 909 million (net of tax) mainly related to the Swiss franc carrying value of investments in US, Eurozone and British subsidiaries; (2) fair value losses on financial investments available-for-sale of CHF 607 million (net of tax) predominantly relating to our fixed-interest bearing long-term bond portfolio, which consists of US and UK government bonds; and (3) changes in the replacement values of interest rate swaps designated as hedging instruments of negative CHF 143 million (net of tax).

- At the end of 2010, our invested asset base was CHF 2,152 billion, down from CHF 2,233 billion at year-end 2009. This decline was mainly due to unfavorable currency effects, as both the US dollar and the euro fell sharply in value against the Swiss franc. In local currencies, the overall market performance was positive. During 2010, net new money stabilized, and over the last two quarters we achieved net inflows for the overall Group. Wealth Management & Swiss Bank recorded net new money inflows of CHF 10.0 billion in full-year 2010, compared with net outflows of CHF 89.8 billion in 2009; Wealth Management Americas’ net new money inflows declined to CHF 6.1 billion in 2010 from CHF 11.6 billion in 2009; Global Asset Management full year net new money flows turned positive to CHF 1.8 billion, compared with net outflows of CHF 45.8 billion in 2009.

- We ended 2010 with an industry-leading Basel II tier 1 capital ratio of 17.8%, up from 15.4% at the end of 2009. Our BIS tier 1 capital increased by CHF 3.5 billion during 2010 to CHF
35.3 billion, due to the CHF 7.5 billion net profit attributable to UBS shareholders and the reversals of own credit losses of CHF 0.5 billion. These effects were partially offset by a redemption of hybrid tier 1 capital of CHF 1.5 billion, increased tier 1 deductions of CHF 1.0 billion, negative effects relating to share-based compensation net of tax of CHF 0.9 billion, as well as currency effects of CHF 0.6 billion and other effects of CHF 0.5 billion. Risk-weighted assets decreased by CHF 7.7 billion during 2010 to CHF 198.9 billion as of 31 December 2010.

- Our total balance sheet assets stood at CHF 1,317 billion on 31 December 2010, down CHF 23 billion compared with year-end 2009. Our funded asset volume, which excludes positive replacement values, remained relatively unchanged, declining by CHF 3 billion in 2010.

➔ Refer to the “Risk and treasury management” section of this report for more information

- On 5 March 2010, the mandatory convertible notes with a notional value of CHF 13 billion issued in March 2008 to the Government of Singapore Investment Corporation Pte. Ltd. and an investor from the Middle East were converted into UBS shares. The notes were converted at a price of CHF 47.68 per share. As a result, UBS issued 272,651,005 new shares with a nominal value of CHF 0.10 each from existing conditional capital.

➔ Refer to “Note 26 Capital increase and mandatory convertible notes” in the “Financial information” section of this report for more information

Seasonal characteristics

Our main businesses do not generally show significant seasonal patterns, although the Investment Bank’s revenues have been affected in some years by the seasonal characteristics of general financial market activity and deal flows in investment banking. Other business divisions are only slightly impacted by seasonal components, such as asset withdrawals that tend to occur in the fourth quarter and by lower client activity levels related to the summer and end-of-year holiday seasons.

Performance measures

Key performance indicators

Our key performance indicators (KPI) framework focuses on key drivers of total shareholder return (TSR), which measures the total return of a UBS share, i.e. both the dividend yield and the capital appreciation of the share price. The KPI framework is reviewed by our senior management on a regular basis to ensure that it is always aligned to the changing business conditions.

The Group and business divisions are managed based on this KPI framework, which emphasizes risk awareness, effective risk and capital management, sustainable profitability, and client focus. Both Group and business division KPI are taken into account in determining variable compensation of executives and personnel.

➔ Refer to the “Compensation” section of this report for more information on total shareholder return

The Group and business division KPI are explained in the “Group/business division key performance indicators” table. Retail & Corporate no longer reports “Net new money” as a key performance indicator. As net new money does not assist the assessment of the performance of this business, our senior management does not consider it to be a meaningful KPI.

Client/invested assets reporting

We report two distinct metrics for client funds:

- The measure “client assets” encompasses all client assets managed by or deposited with us, including custody-only assets and assets held for purely transactional purposes.

- The measure “invested assets” is a more restrictive term and includes all client assets managed by or deposited with us for investment purposes.

Of the two, invested assets is our central measure and includes, for example, discretionary and advisory wealth management portfolios, managed institutional assets, managed fund assets and wealth management securities or brokerage accounts. It excludes all assets held for purely transactional and custody-only purposes, as we only administer the assets and do not offer advice on how these assets should be invested. Non-bankable assets (for example, art collections) and deposits from third-party banks for funding or trading purposes are excluded from both measures.

Net new money in a reported period is the amount of invested assets that are entrusted to us by new or existing clients less those withdrawn by existing clients or clients who terminated their relationship with us. Negative net new money means that there are more outflows than inflows. Interest and dividend income from invested assets is not counted as net new money inflow. However, in Wealth Management Americas we show net new money including interest and dividend income only from the Wealth Management US business for purposes of comparison with US peers. Market and currency movements, as well as fees, commissions and interest on loans charged, are excluded from net new money as are the effects of any acquisition or divestment of a UBS subsidiary or business. Reclassifications between invested assets and client assets as a result of a change in the service level delivered are treated as net new money inflows or outflows. The Investment Bank does not track invested assets and net new money. However, when a client is transferred from the Investment Bank to another business division, this produces net new money even though client assets were already with UBS.

When products are managed in one business division and sold by another, they are counted in both the investment management unit and the distribution unit. This results in double counting within our total invested assets, as both units provide an indepen-
dent service to their respective client, add value and generate revenues. Most double counting arises when mutual funds are managed by Global Asset Management and sold by Wealth Management & Swiss Bank and Wealth Management Americas. The business divisions involved count these funds as invested assets. This approach is in line with both finance industry practices and our open architecture strategy, and allows us to accurately reflect the performance of each individual business. Overall, CHF 225 billion of invested assets were double counted in 2010 (CHF 254 billion in 2009).

→ Refer to "Note 35 Invested assets and net new money" in the "Financial information" section of this report for more information.

1 Retail & Corporate no longer reports “Net new money” as a KPI.
Accounting and reporting structure changes

Wealth Management & Swiss Bank reorganization

From 2010 onwards, the internal reporting of Wealth Management & Swiss Bank to the Group Executive Board was revised in order to better reflect the management structure and responsibilities. Segregated financial information is now reported for:

- “Wealth Management”, encompassing all wealth management business conducted out of Switzerland and in our Asian and European booking centers;
- “Retail & Corporate”, including services provided to Swiss retail private clients, small and medium enterprises and corporate and institutional clients.

In line with this revised internal reporting structure and IFRS 8 Operating Segments, Wealth Management and Retail & Corporate are now presented in our external financial reports as separate business units and reportable segments. Prior periods presented have been restated to conform to the new presentation format.

Allocation of additional Corporate Center costs to reportable segments

From 2010 onwards, almost all costs incurred by the Corporate Center related to shared services and control functions are allocated to the reportable segments, which directly and indirectly receive the value of the services, either based on a full cost recovery or on a periodically agreed flat fee. The allocated costs are shown in the respective expense lines of the reportable segments in ”Note 2a Segment reporting” in the “Financial information” section, and in the “UBS business divisions and Corporate Center” section of this report.

Up to and including 2009, certain costs incurred by the Corporate Center were presented as Corporate Center expenses and not charged to the business divisions. This change in allocation policy has been applied prospectively and prior year numbers have not been restated.

The incremental charges to the business divisions made in 2010 mainly relate to control functions. If figures for each quarter of 2009 had been presented on the basis of the allocation methodology applied for 2010, the estimated impact on operating expenses and performance before tax would have been as shown in the table below.

The “Corporate Center” column of the table in ”Note 2a Segment reporting” has been renamed “Treasury activities and other corporate items”.

➔ Refer to “Note 1a) 33) Segment reporting” in the “Financial information” section of this report for more details

Cash collateral from derivative transactions and prime brokerage receivables and payables

From 2010 onwards, we have changed the presentation of cash collateral from derivative transactions and prime brokerage receivables and payables to improve transparency.

Cash collateral receivables and payables on derivatives are presented in the new balance sheet lines Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments by transferring the amounts out of Due from banks and Loans, and Due to banks and Due to customers, respectively. Prime brokerage receivables and prime brokerage payables have been transferred out of Due from banks and Loans to Other assets, and out of Due to banks and Due to customers to Other liabilities, respectively. These changes in presentation impacted neither our income statement nor total assets and liabilities. The respective tables, notes and other information in the “Financial information” section of this report were adjusted accordingly.

The table on the next page shows the reclassifications for 2009 and 2008.

Personnel expenses

In 2010, we reclassified certain elements of Other personnel expenses to Variable compensation – other in order to align the presentation with the new FINMA definition of variable compensation.

In addition, amounts previously reported under Salaries and variable compensation are presented for the first time on the following separate lines: Salaries, Variable compensation – discretionary bonus, Variable compensation – other and Wealth Management Americas: financial advisor compensation.

Furthermore, we reclassified the pension costs related to bonus to Pension and other post-employment benefit plans. Previously, those amounts were reported under Social security. Prior period amounts have been adjusted accordingly. The change in the presentation did not impact our personnel expenses. The related amounts are disclosed in the footnotes to “Note 6 Personnel expenses” in the “Financial information” section of this report.

**IFRS 9 Financial Instruments**

In November 2009, the International Accounting Standards Board (IASB) issued IFRS 9 Financial Instruments, which includes revised guidance on the classification and measurement of financial assets. In October 2010, the IASB updated IFRS 9 Financial Instruments to include guidance on financial liabilities and derecognition of financial instruments and amended IFRS 7 Financial Instruments: Recognition and Measurement to include transfers of financial assets. The publication of IFRS 9 Financial Instruments represents the completion of the first part of a multi-stage project to replace IAS 39 Financial Instruments: Recognition and Measurement.

The standard requires all financial assets to be classified on the basis of the entity’s business model for managing the financial assets, and the contractual cash flow characteristics of the financial asset. A financial asset is to be accounted for at amortized cost only if the following criteria are met: (i) the objective of the business model is to hold the financial asset for the collection of contractual cash flows; and (ii) the contractual cash flows under the instrument solely represent payments of principal and interest. If a financial asset meets the criteria to be measured at amortized cost, it can be designated at fair value through profit or loss under the fair value option, if doing so would significantly reduce or eliminate an accounting mismatch. Non-traded equity instruments may be accounted for at fair value through other comprehensive income (OCI). Such a designation is available on initial recognition on an instrument-by-instrument basis and is irrevocable. There is no subsequent recycling of realized gains or losses from OCI to profit or loss. All other financial assets are measured at fair value through profit or loss.

The accounting for and presentation of financial liabilities and for derecognition of financial instruments have been transferred from IAS 39 Financial Instruments: Recognition and Measurement to IFRS 9 Financial Instruments. The guidance is unchanged with one exception: the accounting for financial liabilities designated at fair value through profit or loss. The requirements stipulated in IAS 39 Financial Instruments: Recognition and Measurement regarding the classification and measurement of financial liabilities have been retained, including the related application and implementation guidance. The two existing measurement categories for financial liabilities remain unchanged. The criteria for designating a financial liability at fair value through profit or loss also remain unchanged. For financial liabilities designated at fair value through profit or loss, changes in fair value due to changes in an entity’s own credit risk are directly recognized in OCI instead of in profit or loss. There is no subsequent recycling of realized gains or losses from OCI to profit or loss. For financial liabilities that are required to be measured at fair value through profit or loss, i.e. all derivatives and trading portfolio liabilities, all fair value movements will continue to be recognized in profit or loss.

We are currently assessing the impact of the new standard on our financial statements. The effective date for mandatory adoption is 1 January 2013, with early adoption permitted. The IFRS 7 Financial Instruments: Disclosure amendments are applicable for annual accounting periods beginning on or after 1 July 2011. We did not adopt IFRS 9 Financial Instruments for the year ended 31 December 2010.

2010

**Results**

In 2010, we reported a Group net profit attributable to shareholders of CHF 7,534 million, a profit before tax from continuing operations of CHF 7,455 million and a profit before tax from discontinued operations of CHF 2 million. In 2009, we recorded a net loss attributable to shareholders of CHF 2,736 million.

**Operating income**

Total operating income was CHF 31,994 million in 2010, up from CHF 22,601 million in 2009. Net interest income was CHF 6,215 million compared with CHF 6,446 million in the prior year. Net trading income was positive CHF 7,471 million compared with negative CHF 324 million in 2009.

Net interest income includes income from interest margin-based activities (loans and deposits) as well as income earned as a result of trading activities (for example, coupon and dividend income). The dividend income component of interest income is volatile, depending on the composition of the trading portfolio. Net interest and trading income is analyzed below under the relevant business activities in order to provide a more comprehensive explanation of the movements.

**Net income from trading businesses**

Net income from trading businesses, including lending activities of the Investment Bank, was CHF 7,508 million for full-year 2010 compared with CHF 382 million in the prior year.

The Investment Bank’s fixed income, currencies and commodities’ (FICC) trading revenues improved due to an increase in credit trading revenues, which was partially offset by decreases in trading revenues in our macro and emerging markets businesses. A major part of the improvement was due to de-risking and reduction of the residual positions portfolio. Equities trading revenues, excluding own credit, decreased compared with the previous year, primarily in the derivatives and equity-linked business.

An own credit loss on financial liabilities designated at fair value of CHF 548 million was recorded in 2010, compared with a CHF 2,023 million loss in 2009. This was due to continuing but comparatively less tightening of our credit spreads in 2010. Debit valuation adjustments on derivatives in the Investment Bank’s FICC business were positive CHF 155 million compared with negative CHF 1,882 million in 2009. This resulted from the widening of overall credit spreads in the second quarter, partially offset by a tightening of the credit spreads in the third and fourth quarters.

**Credit loss expenses**

In 2010, we reported net credit loss expenses of CHF 66 million. This included CHF 172 million of impairment charges taken on reclassified and acquired securities, partially offset by recoveries on certain loan positions. The net credit loss expenses in 2009 amounted to CHF 1,832 million.

The net credit loss expenses of the Investment Bank were nil in 2010, compared with net credit loss expenses of CHF 1,698 million in 2009. Credit loss expenses of CHF 172 million in relation to reclassified and acquired securities were primarily related to impairments on our student loan auction rate securities inventory, offset by recoveries on certain loan positions.

**Net fee and commission income**

Net fee and commission income was CHF 17,160 million, compared with CHF 17,712 million in the previous year. Income declined slightly in all major fee categories except for portfolio management and advisory fees, as outlined below:

- **Underwriting fees** were CHF 1,912 million compared with CHF 2,386 million in the prior year, due to a decline in both equity and debt underwriting fees. The decrease in equity underwriting fees resulted from an overall market slowdown. Debt underwriting fees declined due to lower revenues in the Investment Bank’s debt capital market business.
- **Mergers and acquisitions and corporate finance fees** were CHF 857 million, a decrease from CHF 881 million in the prior year. This was due to reduced market activity as deal appetite remained subdued in the first half of 2010.
- **Net brokerage fees** fell 8% to CHF 3,837 million mainly due to low transaction volumes and margin compression in 2010.
- **Investment fund fees** were CHF 3,898 million, a 3% decrease compared with the prior year. Lower asset based commission

**Net income from treasury activities and other**

Net income from treasury activities and other was CHF 1,554 million compared with CHF 687 million in 2009. Income from treasury activities was nearly unchanged from last year. A CHF 745 million gain on the valuation of our option to acquire the SNB StabFund’s equity was recorded in 2010, compared with a CHF 117 million gain in the prior year. Additionally, 2009 included a net gain of CHF 297 million (including interest expenses) on the valuation of the mandatory convertible notes (MCN) issued in December 2008 and converted in August 2009.

**Net income from interest margin businesses**

Net income from interest margin businesses was CHF 4,624 million compared with CHF 5,053 million in the prior year. This decrease was primarily attributable to lower margins and negative currency effects.

1 In 2010, we corrected the amounts presented in previous periods on the lines Brokerage fees, Brokerage fees paid, Other and Net brokerage fees. Amounts previously disclosed have been decreased as follows: Brokerage fees by CHF 817 million and CHF 1,059 million for the years ended 31 December 2009 and 31 December 2008, respectively; Brokerage fees paid by CHF 517 million and CHF 599 million for the years ended 31 December 2009 and 31 December 2008, respectively; Other and Net brokerage fees by CHF 300 million and CHF 460 million for the years ended 31 December 2009 and 31 December 2008, respectively. The total of Net fee and commission income and consequently Net profit attributable to UBS shareholders are not affected by this correction.
fees on UBS funds were partly offset by higher fees on third-party funds and sales-based commission income.

- **Portfolio management and advisory fees** increased 2% to CHF 5,959 million, mainly due to higher portfolio management fees in our Wealth Management Americas business division. This was partly offset by lower portfolio management fees in Global Asset Management, primarily resulting from lower performance fees in its alternative and quantitative investments business, and by lower portfolio management and advisory fees in Wealth Management & Swiss Bank and the Investment Bank.

- **Other commission expense** fell 10% to CHF 964 million, mainly due to lower commissions paid for payment transactions, other services and management advisory.

**Other income**

Other income was CHF 1,214 million in 2010, compared with CHF 599 million in the previous year. Other income in 2010 included a CHF 180 million gain from the sale of investments in associates owning real estate in New York, a gain of CHF 158 million from the sale of a property in Zurich, CHF 324 million gains from the disposal of loans and receivables (including sales and issuer redemptions of auction rate securities), a CHF 69 million de-mutualization gain from our stake in the Chicago Board Options Exchange, and a negative CHF 45 million valuation adjustment on a property fund held by Wealth Management & Swiss Bank.

➔ Refer to “Note 5 Other income” in the “Financial information” section of this report for more information

**Operating expenses**

Total operating expenses were CHF 24,539 million in 2010, compared with CHF 25,162 million in 2009. Operating expenses in 2010 included CHF 113 million of net restructuring charges, while operating expenses in 2009 included goodwill impairment charges of CHF 1,123 million and restructuring charges of CHF 791 million.

**Personnel expenses**

Personnel expenses were CHF 16,920 million, up from CHF 16,543 million in the prior year. Personnel expenses recorded in 2010 included discretionary variable compensation expenses of CHF 4.1 billion, of which CHF 1.5 billion relates to variable compensation brought forward from prior years. The discretionary bonus pool granted to employees for the performance year 2010 was CHF 4.2 billion, 11% lower than in the previous year. Of this amount, CHF 2.6 billion is recognized in the income statement in 2010, and CHF 1.6 billion will be deferred to future periods. Other personnel expenses in 2010 included a charge of CHF 0.2 billion for the UK Bank Payroll Tax.

Other variable compensation was CHF 310 million in 2010 compared with CHF 830 million in 2009. The decrease was mainly due to restructuring-related severance costs recognized in 2009.

➔ Refer to the “Compensation” section of this report for more information

**General and administrative expenses**

General and administrative expenses were CHF 6,585 million in 2010 compared with CHF 6,248 million in 2009. Marketing and public relations expenses increased primarily due to the costs associated with sponsoring and branding campaigns related to the global re-launch of the UBS brand. Other general and administrative expenses increased due to higher litigation provisions, partially offset by lower restructuring provisions. Costs of outsourcing IT and other services as well as travel and entertainment were higher compared with the prior year. These increases were partly offset by reduced spending on occupancy, rent and maintenance of IT and other equipment, telecommunications and postage, administration and professional fees.

➔ Refer to “Note 7 General and administrative expenses” in the “Financial information” section of this report for more information

**Depreciation, amortization and impairment of goodwill**

Depreciation was CHF 918 million in 2010, compared with CHF 1,048 million in 2009. Amortization of intangible assets was CHF 117 million compared with CHF 200 million in the prior year. No goodwill impairment charges were recorded in 2010. A goodwill impairment charge of CHF 1,123 million relating to the sale of UBS Pactual was recorded in 2009.

**Income tax**

We recognized a net income tax benefit in our income statement of CHF 381 million for 2010. This included a deferred tax benefit of CHF 605 million and current tax expenses of CHF 224 million.

The deferred tax benefit reflects the recognition of additional deferred tax assets in respect of tax losses and temporary differences in a number of foreign locations including the US (tax benefit of CHF 1,161 million) and Japan (tax benefit of CHF 98 million), taking into account updated taxable profit forecast assumptions over the five-year time horizon used for recognition purposes. This was partly offset by a Swiss net deferred tax expense. Swiss tax losses, for which deferred tax assets have previously been recognized, were used against profits for the year (tax expenses of CHF 1,409 million). This was partly offset by an upward revaluation of Swiss deferred tax assets taking into account revised profit forecast assumptions (tax benefit of CHF 741 million).

The current tax expenses relate to tax expenses in respect of taxable profits of Group entities, partially offset by tax benefits arising from the agreement on prior year positions with tax authorities in various locations.

The tax benefit for the year in the income statement is CHF 320 million higher than that in our fourth quarter 2010 report issued on 8 February 2011.
Strategy, performance and responsibility

➔ Refer to “Note 33 Events after the reporting period” in the “Financial information” section of this report for more information

During 2009, we recognized a net income tax benefit in our income statement of CHF 443 million. This reflected a deferred tax benefit mainly relating to the recognition of additional deferred tax assets in respect of tax losses, partly offset by current tax expenses relating to taxable profits of Group entities.

Net profit attributable to non-controlling interests

Net profit attributable to non-controlling interests for 2010 was CHF 304 million, compared with CHF 610 million for 2009. This decrease was primarily the consequence of the attribution in 2009, rather than in 2010, of CHF 132 million of net profit to non-controlling interests in connection with certain dividends payable in 2010 on hybrid capital instruments classified as non-owner equity. This attribution was made out of 2009’s net profit following a determination that a triggering event had occurred that caused the 2010 dividend payments to become obligatory under the terms of these hybrid capital instruments. The triggering event was the cash payment made by UBS in 2009 to the Swiss Confederation in consideration of the Confederation’s waiver of its right to receive future coupon payments on the mandatory convertible notes due in 2011.

Had the 2010 dividend payments been applied to net profit in 2010 rather than in 2009, the net profit attributed to non-controlling interests would have been CHF 478 million in 2009 and CHF 436 million in 2010.

Comprehensive income attributable to UBS shareholders

Comprehensive income attributable to UBS shareholders includes all changes in equity (including net profit) attributed to UBS shareholders during a period, except those resulting from investments by and distributions to shareholders as well as equity settled share-based payments. Items included in comprehensive income, but not in net profit, are reported under other comprehensive income (OCI). Most of those items will be recognized in net profit when the underlying item is sold or realized.

Comprehensive income attributable to UBS shareholders in 2010 was CHF 5,875 million, including net profit attributable to UBS shareholders of CHF 7,534 million, partially offset by other comprehensive income attributable to UBS shareholders of negative CHF 1,659 million.

OCI attributable to UBS shareholders was negative in 2010 due to: (1) losses in the currency translation account of CHF 909 million (net of tax) related to the Swiss franc carrying value of investments in subsidiaries whose reporting currencies are other than Swiss francs; (2) fair value losses on financial investments available-for-sale of CHF 607 million (net of tax); and (3) changes in the replacement values of interest rate swaps designated as hedging instruments of negative CHF 143 million (net of tax). Foreign currency translation-related OCI losses attributable to UBS shareholders of CHF 1,501 million (net of tax) in 2010 largely resulted from the strengthening of the Swiss franc against the US dollar, British pound and euro. We have foreign operations conducted through entities with these functional currencies. These losses in foreign currency translation were partially offset by an out-of-period credit of CHF 592 million resulting from the correction of prior period misstatements. Fair value losses on financial investments available-for-sale predominantly relate to our fixed-interest bearing long-term bond portfolio, which consists of US and UK government bonds. During the fourth quarter, the fair value of this portfolio decreased, mostly due to rising market interest rates. On a net basis, the fair value movement of US dollar, euro and British pound fixed-receiver and fixed-payer interest rate swaps designated in cash flow hedges was slightly negative during the year.

➔ Refer to the “Statement of comprehensive income” section and “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information

Invested assets

Total invested assets were CHF 2,152 billion on 31 December 2010, a decrease of 4% from CHF 2,233 billion on 31 December 2009. Positive market developments were more than offset by negative currency effects and net new money outflows.

2009

Results

In 2009, we reported a Group net loss attributable to shareholders of CHF 2,736 million, a loss before tax of CHF 2,561 million from continuing operations and a loss before tax of CHF 7 million from discontinued operations. In 2008, we recorded a net loss attributable to shareholders of CHF 21,292 million.

Operating income

Total operating income was CHF 22,601 million in 2009, up from CHF 796 million in 2008. Net interest income at CHF 6,446 million was up 8% compared with CHF 5,992 million a year earlier. Net trading income was negative CHF 324 million compared with negative CHF 25,820 million in 2008.

In 2009, we reviewed our approach to calculating and booking of own credit on derivative liabilities and financial liabilities designated at fair value. As of the transition date of 1 January 2009, changes resulting from this review led to an increase in our 2009 net trading income of CHF 143 million, made up of a CHF 365 million credit to net income from trading businesses and a charge of CHF 222 million to net income from treasury activities and other.

Net income from trading businesses

Net income from trading businesses, including lending activities of the Investment Bank, was positive CHF 382 million for the full-year 2009, compared with negative CHF 27,203 million in 2008. The improvement was mainly due to lower losses on residual risk positions in the Investment Bank’s fixed income, currencies and commodities (FICC) business in 2009.

Trading revenues from the FICC business improved from 2008, due to lower losses on residual risk positions as mentioned above.

Equities trading revenues (excluding own credit) improved from 2008. Equity-linked revenues increased significantly as all regions benefitted from improvements in valuations and liquidity. Proprietary trading revenues improved with a strong performance recorded across all geographical regions.

In 2009, the Investment Bank recorded a loss on own credit from financial liabilities designated at fair value of CHF 2,023 million as our credit spread narrowed in 2009, compared with a gain of CHF 2,032 million in 2008. This was partially affected by the abovementioned change in the approach to calculating and booking of own credit.

Net income from interest margin businesses

Net income from interest margin businesses decreased 18% to CHF 5,053 million in 2009 from CHF 6,160 million in 2008. This decrease was primarily attributable to lower margins on loans and liabilities.

Net income from treasury activities and other

Net income from treasury activities and other was CHF 687 million in 2009 compared with CHF 1,214 million in 2008 due to a net gain of CHF 297 million (including interest expenses) on the valuation of the mandatory convertible notes (MCN) issued in December 2008 and converted in August 2009, and a gain of CHF 117 million on the revaluation of our option to acquire the SNB Stab-Fund’s equity. In comparison, 2008 included an accounting gain of CHF 3,860 million related to the MCN issued in March 2008, which was offset by the CHF 3.4 billion negative impact of the transaction with the Swiss National Bank and the abovementioned MCN issued in December 2008, resulting in a total gain of CHF 0.4 billion.

Credit loss expenses

In 2009, we experienced net credit loss expenses of CHF 1,832 million, of which CHF 425 million were due to impairment charges taken on reclassified securities in the Investment Bank. In comparison, we recorded net credit loss expenses of CHF 2,996 million in 2008.

The Investment Bank recorded net credit loss expenses of CHF 1,698 million in 2009, compared with net credit loss expenses of CHF 2,575 million in 2008. Excluding the credit loss expenses from reclassified securities of CHF 425 million, the net credit loss expenses amounted to CHF 1,273 million in 2009.

Wealth Management & Swiss Bank reported net credit loss expenses of CHF 133 million for 2009, compared with CHF 392 million in 2008. Releases of allowances against lombard loans in 2009 contributed to this positive development.

Net fee and commission income

Net fee and commission income was CHF 17,712 million in 2009, down 23% from CHF 22,929 million in 2008. Income declined in all major fee categories except for underwriting fees, as outlined below:

- **Underwriting fees** increased 22% to CHF 2,386 million, due to a 40% increase in equity underwriting fees, offset by a 3% decrease in debt underwriting fees.
- **Mergers and acquisitions and corporate finance fees** fell 47% to CHF 881 million due to reduced market activity as deal appetite remained subdued.
- **Net brokerage fees** fell 30% to CHF 4,169 million mainly due to a reduction in equity trading volumes.
- **Investment fund fees** fell 28% to CHF 4,000 million as a result of lower asset-based fees on both own and third-party funds.
Portfolio management and advisory fees fell 24% to CHF 5,863 million, mainly due to the decreased average asset base, especially in the wealth management businesses.

Other commission expense fell 30% to CHF 1,068 million, mainly due to lower commissions paid to distribution partners.

Other income
Other income was CHF 599 million in 2009 compared with CHF 692 million in 2008. Other income in 2009 included a loss of CHF 498 million related to the sale of UBS Pactual, foreign exchange gains of CHF 430 million on other divestments of subsidiaries, a gain of CHF 304 million on the buyback of subordinated debt and impairment charges of financial investments available-for-sale of CHF 349 million.

Refer to “Note 5 Other income” in the “Financial information” section of our Annual Report 2009 for more information

Operating expenses
Total operating expenses were down 12% to CHF 25,162 million in 2009 from CHF 28,555 million in 2008. Total restructuring charges of CHF 791 million were incurred in 2009, including CHF 491 million in personnel expenses, mainly for severance payments, CHF 256 million in general and administrative expenses, primarily for real-estate related costs, and CHF 45 million of depreciation and impairment losses on property and equipment.

Personnel expenses
Personnel expenses were CHF 16,543 million in 2009 compared with CHF 16,262 million in 2008. Headcount reductions were partially offset by salary increases. Discretionary variable compensation recognized in the income statement in 2009 was CHF 2.8 billion. Discretionary variable compensation of CHF 3.0 billion for 2009 and brought forward from prior years was partially recognized in the income statement in 2010 and the remaining part will be recognized in future periods, subject to the vesting conditions of the respective awards granted. It included a charge for performance (and retention) awards that were to be granted, or were expected to be granted, in 2010 in relation to the 2009 performance year but which, as of the balance sheet date, had in fact not been granted. The 2009 results did not include a provision for bank payroll tax in the UK.

Contractors’ expenses, at CHF 275 million, were down 35% from 2008. This was due to a substantial reduction of employed contractors and a favorable foreign exchange impact. Social security increased 22% to CHF 804 million in 2009, due to our equity compensation plan. Pension and other post-employment benefit plans increased CHF 16 million to CHF 988 million. Other personnel expenses decreased 21%, mainly due to headcount reduction and lower training, recruitment and travelling costs.

General and administrative expenses
General and administrative expenses declined 40% to CHF 6,248 million in 2009. All general and administrative expense categories decreased in 2009 primarily as a result of our cost reduction programs. Furthermore, 2008 included provisions for auction rate securities of CHF 1,464 million and provisions in relation to the US cross-border matter of CHF 917 million. The largest reductions in absolute terms were in travel and entertainment expenses, and in professional fees.

Refer to “Note 21 Provisions and litigation” in the “Financial information” section of our Annual Report 2009 for more information about provisions

Depreciation, amortization and impairment of goodwill
Depreciation of property and equipment declined 16% to CHF 1,048 million in 2009. Amortization of intangible assets was CHF 200 million compared with CHF 213 million in 2008.

A goodwill impairment charge of CHF 1,123 million was recorded in 2009, relating to the sale of UBS Pactual. In 2008 a goodwill impairment charge of CHF 341 million was recorded relating to the Investment Bank’s exit from the municipal securities business.

Income tax
We recognized a net income tax benefit in our income statement of CHF 443 million for the full-year 2009. This included a deferred tax benefit of CHF 960 million, which reflected the recognition of additional deferred tax assets in respect of tax losses and temporary differences in certain locations, including the US (CHF 373 million) and Japan (CHF 127 million), taking into account updated profit forecast assumptions over the five-year time horizon used for recognition purposes. In addition, it reflected the release of a deferred tax liability of CHF 243 million relating to UBS Pactual prior to its sale during 2009. This deferred tax benefit was partially offset by a tax charge of CHF 517 million, which mainly related to entities with taxable profits.

During 2008, we recognized a net income tax benefit in our income statement of CHF 6,837 million, which mainly reflected a CHF 6,126 million impact from the increase in deferred tax assets on tax losses.

Invested assets
Total invested assets were CHF 2,233 billion on 31 December 2009, an increase of 3% from CHF 2,174 billion on 31 December 2008. Positive market developments were nearly offset by net new money outflows, a reduction of invested assets related to divestments, and negative currency translation effects.

Strategy, performance and responsibility

Balance sheet development

31.12.10 vs. 31.12.09

Our total assets stood at CHF 1,317 billion on 31 December 2010, down CHF 23 billion (2%) from CHF 1,341 billion on 31 December 2009. The reduction occurred mainly in replacement values (RV), which decreased to a similar extent on both sides of the balance sheet, as market and currency movements drove down positive RV 5% to CHF 401 billion, and negative RV by 4% to CHF 394 billion. Our funded asset volume, which excludes positive RV, remained relatively unchanged, declining by CHF 3 billion in 2010. Nevertheless, our asset composition changed as cash collateral receivables on derivative instruments dropped by CHF 16 billion to CHF 38 billion, financial investments available-for-sale fell by CHF 7 billion to CHF 75 billion, and trading portfolio assets declined by CHF 3 billion to CHF 229 billion. These declines were partially offset by increases in collateral trading assets, which rose by CHF 25 billion to CHF 205 billion, while lending assets remained stable around CHF 315 billion.

Currency effects for 2010 included the strengthening of the Swiss franc against the euro, British pound, and the US dollar, and weakening of the Swiss franc against the Japanese yen. These effects deflated our balance sheet, excluding positive RV, by roughly CHF 70 billion.

To a large extent, the total asset reduction occurred in the Investment Bank, as the abovementioned change in positive replacement values and lower balances in current accounts arising from collateralized derivative over-the-counter (OTC) transactions (variation margins) contributed significantly to the business division’s CHF 25 billion decline to CHF 967 billion. Wealth Management’s balance sheet assets fell by CHF 16 billion to CHF 94 billion. Global Asset Management’s balance sheet assets decreased by

Balance sheet development – assets

Balance sheet development – liabilities and equity

1 Including cash collateral receivables on derivative instruments.

1 Total balance sheet excluding positive replacement values. 2 Including cash collateral receivables on derivative instruments.

1 Total balance sheet excluding negative replacement values. 2 Percentages based on total balance sheet size excluding negative replacement values. 3 Including cash collateral payables on derivative instruments. 4 Including financial liabilities designated at fair value.
CHF 4 billion to CHF 16 billion, and Wealth Management Americas’ balance sheet assets decreased by CHF 3 billion to CHF 50 billion. The balance sheet asset size of Retail & Corporate increased by CHF 15 billion to CHF 153 billion. Treasury activities and other corporate items rose by CHF 10 billion to CHF 37 billion. Balance sheet positions disclosed in this section represent year-end positions. Intra-quarter balance sheet positions may be different.

➔ Refer to the table “FINMA leverage ratio calculation” in the “Capital management” section of this report for our average month-end balance sheet size for the fourth quarter 2010 and 2009

**Lending and borrowing**

**Lending**
Cash and balances with central banks was CHF 27 billion on 31 December 2010, an increase of CHF 6 billion from the prior year-end, related to an increase in overnight deposits with central banks. Loans to customers decreased CHF 4 billion to CHF 263 billion due to currency effects, which lowered our loan portfolio by CHF 10 billion. On a currency adjusted basis, loans to customers increased CHF 6 billion, predominantly in our wealth management businesses, where they grew by CHF 12 billion. Volume growth occurred across all major products, including Lombard lending, fixed-term loans, and current accounts. This was partly offset by a reduction of student loan auction rate securities and our loan to the RMBS Opportunities Master Fund, LP (BlackRock).

➔ Refer to the “Risk and treasury management” section for more information

**Borrowing**
Overall, our unsecured borrowing declined by CHF 10 billion to CHF 605 billion. Financial liabilities designated at fair value stood at CHF 101 billion on 31 December 2010, a drop of CHF 12 billion from 31 December 2009, mainly due to currency effects, which reduced the outstanding balance of equity-linked and credit-linked notes. Customer deposits (due to customers) amounted to CHF 332 billion, a decrease of CHF 7 billion compared with 2009, however, grew by CHF 17 billion on a currency-adjusted basis, mainly related to an increase in our wholesale deposits. Our wealth management businesses cash deposits grew by CHF 3 billion on a currency-adjusted basis, with inflows/shifts into current accounts, savings and personal accounts, and pension fund investment accounts from fiduciary investments and fixed-term deposits. Interbank borrowing (due to banks) was CHF 41 billion on 31 December 2010, up CHF 10 billion from 31 December 2009, to an almost equal extent due to our short-term wholesale and our Retail & Corporate business. Money market paper issuance was CHF 56 billion at year-end 2010, an increase of CHF 4 billion from the prior year-end, while long-term debt declined by CHF 6 billion to CHF 74 billion, mainly related to currency effects, which contributed to a reduction of CHF 8 billion.

➔ Refer to the “Liquidity and funding management” section for more information on long-term debt issuance

**Repurchase / reverse repurchase agreements and securities borrowing / lending**
Cash collateral on securities borrowed and reverse repurchase agreements increased year-on-year by CHF 25 billion to CHF 205 billion on 31 December 2010. This increase was partly due to increased trading balances in the matched book and to higher short-coverings via reverse repurchase agreements and securities borrowing transactions. In a matched book, the dealer reverses collateral from one customer and repos it to another customer at a different rate generating additional profit from mismatching maturities. A significant amount of trading assets is funded via repurchase agreements. Therefore, in addition to the increase in the matched book, the increase in the Investment Bank’s trading assets also contributed to the rise in repurchase agreements. These increases are reflected on the liability side of the balance sheet, where repurchase agreements and securities lent against cash collateral grew by CHF 9 billion in 2010 and stood at CHF 81 billion on 31 December 2010.

**Trading portfolio**
Trading portfolio assets declined by CHF 3 billion to stand at CHF 229 billion on 31 December 2010. The majority of this decrease is related to currency effects and trading inventory held for regulatory requirements within our wealth management business. The Investment Bank’s trading portfolio grew by CHF 9 billion, primarily as a result of an increase in holdings of money market papers (mainly treasury bills) of CHF 11 billion and precious metals (mainly silver and palladium) of CHF 2 billion, partially offset by debt instruments, which declined by CHF 5 billion (mainly US government paper and corporate debt).

**Replacement values**
The positive and the negative replacement values (RV) of derivative instruments developed roughly in parallel, decreasing by CHF 21 billion (5%) and CHF 16 billion (4%), respectively, and ending 2010 at CHF 401 billion and CHF 394 billion, respectively. Decreases in positive RV occurred in credit derivative contracts, which declined by CHF 23 billion due to a tightening of credit
spreads. Interest rate contracts dropped by CHF 11 billion due to a steepening in interest rate yield curves, specifically those denominated in euro and British pound. These declines were partially offset by foreign exchange contracts, which grew by CHF 16 billion, related to the strengthening of the Swiss franc against major currencies.

**Financial investments available-for-sale**

Financial investments available-for-sale declined by CHF 7 billion to CHF 75 billion in 2010, reflecting currency effects. The majority of these instruments include highly liquid short-term securities issued by governments and government-controlled institutions in various currencies, mainly US dollars, euro and British pound. It also includes a portfolio of US and UK government bonds with a face amount of CHF 15 billion and a weighted average maturity of approximately eight years.

**Other assets / other liabilities**

Commencing in the fourth quarter of 2010, UBS has changed the presentation of prime brokerage receivables and payables and cash collateral from derivative transactions to improve transparency. Prime brokerage receivables and prime brokerage payables have been transferred out of *Due from banks* and *Loans to Other assets*, and out of *Due to banks* and *Due to customers to Other liabilities*, respectively. *Cash collateral receivables and payables on derivatives* are presented in the new balance sheet lines *Cash collateral receivables on derivative instruments* and *Cash collateral payables on derivative instruments* by transferring the amounts out of *Due from banks* and *Loans*, and *Due to banks* and *Due to customers*, respectively. In the aforementioned waterfall graphs, *Cash collateral receivable and payable on derivative instruments* are shown in *Other assets* and *Other liabilities*. Comparative periods have been adjusted accordingly.

→ Refer to the “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information

**Shareholders’ equity**

On 31 December 2010, equity attributable to UBS shareholders was CHF 46.8 billion, representing an increase of CHF 5.8 billion compared with 31 December 2009. The increase in 2010 reflects a net profit of CHF 7.5 billion, partially offset by negative effects recognized in equity (including currency translation effects) of CHF 1.7 billion.

→ Refer to the “Shares and capital instruments” section of this report for more information
**Off-balance sheet**

**Off-balance sheet arrangements**

Off-balance sheet arrangements include purchased and retained interests and derivatives, as well as other involvements in non-consolidated entities and structures originated by us or set up by third parties. Generally, these arrangements either meet the financial needs of clients or offer investment opportunities through entities that are not controlled by us.

In the normal course of business, we enter into arrangements that, under IFRS, lead to de-recognition of financial assets and liabilities for which we have transferred substantially all risks and rewards (financial assets), or for which the financial liabilities are extinguished.

In addition, we enter into arrangements where the financial assets (and liabilities) received are not recognized on the balance sheet because we have not assumed the related risks and rewards (financial assets) and/or because we did not become party to the contractual provisions of the financial instruments. We recognize these types of arrangements on the balance sheet only to the extent of their involvement, which, for example, may be in the form of derivatives, guarantees, financing commitments or servicing rights.

When we, through these arrangements, incur an obligation or become entitled to an asset, we recognize them on the balance sheet. It should be noted that in many instances the amount recognized on the balance sheet does not represent the full gain or loss potential inherent in such arrangements.

The following paragraphs discuss several distinct areas of off-balance sheet arrangements. Additional disclosure on certain areas of off-balance sheet arrangements can be found in other sections of this report, as indicated in the table below.

Risk positions
Our risk concentrations and other relevant risk positions are disclosed in detail in the audited parts of the "Risk management and control" section of this report. As of 31 December 2010 these positions included exposures to monoline insurers and student loan auction rate securities.

The importance and the potential impact of such risk positions (with respect to liquidity, capital resources or market and credit risk support), including off-balance sheet structures, are also described in the "Risk and treasury management" section of this report.

Liquidity facilities and similar obligations
On 31 December 2010 and 2009, we had no significant exposure through liquidity facilities and guarantees to structured investment vehicles, conduits and other similar types of special purpose entities (SPE). Losses resulting from such obligations were not significant in 2010 and 2009.

Non-consolidated securitization vehicles and collateralized debt obligations
Up to and including 2008, we sponsored the creation of SPE that facilitate the securitization of acquired residential and commercial mortgage loans, other financial assets and related securities. We also securitized clients’ debt obligations in transactions involving SPE which issued collateralized debt obligations (CDO), which typically refer to a security that is collateralized by a pool of bonds, loans, equity, derivatives or other assets. A securitization transaction of this kind generally involves the transfer of assets into a trust or corporation in return for the receipt of beneficial interests in the form of securities. Financial assets held by such trusts and corporations are no longer reported in our consolidated financial statements once their risks and rewards are transferred to a third-party.

1 The total pool assets held by non-consolidated investment vehicles where UBS is involved are reflected under "Total SPE assets". The involvement of UBS in these vehicles is disclosed under the column "Involvements in non-consolidated SPE held by UBS". UBS involvement may be in the form of purchased and retained interests or derivatives. "Total SPE assets" include information which UBS could gather after making exhaustive efforts but excludes data which UBS was unable to obtain (in sufficient quality), especially for structures originated by third parties.

2 Includes loans and receivables measured at amortized cost in the amount of CHF 0.8 billion originated by UBS and CHF 7.8 billion for structures not originated by UBS and trading assets measured at fair value in the amount of CHF 6.0 billion for structures not originated by UBS.
We did not sponsor the creation of any abovementioned SPE, and did not issue or sponsor the issue of new CDO in transactions involving SPE in 2009 and 2010. Certain retained interests relating to 2008 and earlier issuances (mainly instruments linked to the mortgage market) could not be sold and continued to be retained in 2010. However, the volume and size of retained interests were further reduced as of 31 December 2010, compared with the prior year.

Our involvements in non-consolidated securitization vehicles and CDO disclosed in this section are typically managed on a portfolio basis alongside hedges and other offsetting financial instruments. The “Non-consolidated securitization vehicles and collateralized debt obligations – non-agency transactions” table does not include these offsetting factors, and does not represent a measure of risk.

Our involvement in vehicles whose residential and commercial mortgage securities are backed by an agency of the US government – for example the Government National Mortgage Association, the Federal National Mortgage Association, or the Federal Home Loan Mortgage Corporation – is not included in the abovementioned table, due to the comprehensive involvement of the US government in these organizations and their significantly lower risk profile.

The numbers in the table are different from the numbers disclosed on securitizations in the “Basel II Pillar 3” section of this report, predominantly due to different scopes (for example Pillar 3 disclosures are on banking book positions only, and the consolidation status is different for several vehicles), and to some extent, due to a different measurement basis.

Consolidation of securitization vehicles and collateralized debt obligations
We continually evaluate whether triggering events require reconsideration of the consolidation conclusions made at the inception of our involvement with securitization vehicles and CDO.

As of 31 December 2010 there were no holdings which required reconsideration of the consolidation assessment.

➔ Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for further information on consolidation of securitization vehicles and CDO.

Risks resulting from non-consolidated securitization vehicles and collateralized debt obligations
The “Risk management and control” section of this report provides detailed disclosure of our risk concentrations, as well as risks associated with our involvement in consolidated and non-consolidated mortgage securitization vehicles and CDO.

Support to non-consolidated investment funds
In the ordinary course of business, we issue investment certificates to third parties that are linked to the performance of non-consolidated investment funds. Such investment funds are originated either by us or by third parties. For hedging purposes, we generally invest in the funds to which our obligations from the certificates are linked. Risks resulting from these contracts are considered minimal, as the full performance of the funds is passed on to third parties.

In 2009 and 2008, as a result of the financial markets crisis which caused declining asset values, market illiquidity and de-leveraging by investors, we supported several non-consolidated investment funds that we manage in our wealth and asset management businesses. We provided this support primarily to facilitate redemption requests of fund investments by clients. Material support was provided in the form of collateralized financing, direct acquisition of fund units and purchases of assets from the funds. The support we provided to these investment funds was made where there were regulatory or other legal requirements or other exceptional considerations.

Acquired fund units and fund assets are generally accounted for as financial investments available-for-sale, and are included in the respective risk disclosures in the “Risk management and control” section of this report.

As a result of the recovery in financial markets, direct acquisitions of fund units were immaterial in 2010. Purchases of assets from the funds that we manage and guarantees granted to third parties in the context of such non-consolidated funds were also immaterial. Collateralized financing provided to such funds was CHF 0.8 billion as of 31 December 2010. Losses incurred on fund units accounted as financial investments available-for-sale amounted to CHF 73 million in 2010.

In addition, in the ordinary course of business, our wealth and asset management businesses provide short-term funding facilities to investment funds that we manage. This bridges time lags in fund unit redemptions and subscriptions. These bridge financings did not incur in 2010 and are not expected to incur material losses in the future.

It is possible that we may decide in future to provide financial support to one or more of our investment funds. Such a decision would be taken on a case-by-case basis and would be based on legal or regulatory requirements or extraordinary circumstances prevailing at the time. The risks incurred by providing such support will depend on the type of support and the riskiness of the assets held by the fund(s) in question. If we were to provide extensive financial support to some of our investment funds, losses incurred as a result of such support could become material.

Guarantees and similar obligations
In the normal course of business we issue: various forms of guarantees to third parties; commitments to extend credit; standby and other letters of credit to support our clients; commitments to enter into forward starting transactions; note issuance facilities; and revolving underwriting facilities. With the exception of related premiums, generally these guarantees and similar obligations are kept as off-balance sheet items unless a provision to cover probable losses is required.

On 31 December 2010, the exposure to credit risk (gross values less sub-participations) for credit guarantees and similar instruments was CHF 15.4 billion compared with CHF 16.0 billion one year earlier. Fee income from issuing guarantees is not material to total revenues.
Guarantees represent irrevocable assurances, subject to the satisfaction of certain conditions, that we will make payment in the event that clients fail to fulfill their obligations to third parties. We also enter into commitments to extend credit in the form of credit lines that are available to secure the liquidity needs of clients. The majority of these unutilized credit lines range in maturity from one month to five years. If customers fail to meet their obligations, our maximum amount at risk is the contractual amount of these instruments. The risk is similar to the risk involved in extending loan facilities and is subject to the same risk management and control framework. For the year ended 31 December 2010, we recognized net credit losses of CHF 43 million (CHF 4 million for the year ended 31 December 2009) related to obligations incurred for contingencies and commitments. Provisions recognized for guarantees, documentary credits and similar instruments were CHF 130 million as of 31 December 2010 and CHF 90 million as of 31 December 2009.

We enter into partial sub-participations to mitigate the risks from commitments and contingencies. A sub-participation is an agreement by another party to take a share of the loss in the event that the obligation is not fulfilled by the obligor and, where applicable, to fund a part of the credit facility. We retain the contractual relationship with the obligor, and the sub-participant has only an indirect relationship. We will only enter into sub-participation agreements with banks to which we ascribe a credit rating equal to or better than that of the obligor.

Furthermore, we provide representations, warranties and indemnifications to third parties in connection with numerous transactions, such as asset securitizations.

Clearinghouse and future exchange memberships
We are a member of numerous securities and futures exchanges and clearings. In connection with some of those memberships, we may be required to pay a share of the financial obligations of another member who defaults, or otherwise be exposed to additional financial obligations as a result. While the membership rules vary, obligations generally would arise only if the exchange or clearinghouse had exhausted its resources. We consider the probability of a material loss due to such obligations to be remote.

Swiss deposit insurance
Swiss banking law and the deposit insurance system require Swiss banks and securities dealers to jointly guarantee an amount of up to CHF 6 billion for privileged client deposits in the event that a Swiss bank or securities dealer becomes insolvent. For the period from 1 July 2010 to 30 June 2011, FINMA estimates our share in the deposit insurance system to be CHF 1.0 billion. The deposit insurance is a guarantee and exposes us to additional risk which is not reflected in the “Maximum exposure to credit risk” table in “Note 29c Measurement categories of financial assets and financial liabilities” in the “Financial information” section of this report. As of 31 December 2010, we consider the probability of a material loss from our obligation to be remote.

Private equity funding commitments, equity and debt underwriting commitments
We enter into commitments to fund external private equity funds and investments, which typically expire within one to five years. The commitments generally require us to fund external

Financial liabilities not recognized on balance sheet

¹ From 2010 onwards, collateralized forward starting transactions (cash to be paid in the future by either UBS or the counterparty) are presented in this table; the comparative period has been adjusted accordingly.
private equity funds and investments at market value at the time the commitments are drawn. The amount committed to fund these investments on 31 December 2010 and 31 December 2009 was CHF 0.1 billion and CHF 0.3 billion, respectively. Equity underwriting commitments in the Investment Bank on 31 December 2010 and 31 December 2009 amounted to CHF 0.2 billion and CHF 1.7 billion, respectively. Debt underwriting commitments entered into by Wealth Management Americas were not material.

**Contractual obligations**

The table below includes contractual obligations as of 31 December 2010.

All contracts included in this table, with the exception of purchase obligations (those where we are committed to purchasing determined volumes of goods and services), are either recognized as liabilities on our balance sheet or, in the case of operating leases, disclosed in “Note 25 Operating lease commitments” in the “Financial information” section of this report.

The following liabilities are recognized on the balance sheet and excluded from the table: provisions (as disclosed in “Note 21 Provisions and contingent liabilities” in the “Financial information” section of this report), current and deferred tax liabilities (refer to “Note 22 Income taxes” in the “Financial information” section of this report for more information), liabilities to employees for equity participation plans, settlement and clearing accounts and amounts due to banks and customers.

Within purchase obligations, the obligation to employees under the mandatory notice period is excluded (this is the period in which we must pay to employees leaving the firm contractually-agreed salaries).

Cash flows

2010

As of 31 December 2010, the level of cash and cash equivalents declined to CHF 140.8 billion, down CHF 24.2 billion from CHF 165.0 billion at the end of 2009.

Operating activities

Operating activities generated a cash inflow of CHF 12.0 billion in 2010 compared with a cash inflow of CHF 54.5 billion in 2009. Operating cash inflows (before changes in operating assets and liabilities and income taxes paid, net of refunds) totaled CHF 8.8 billion in 2010, a decrease of CHF 1.0 billion from 2009. Net profit improved CHF 10.0 billion compared with 2009.

Cash inflow of CHF 2.4 billion was generated by the net decrease in operating assets; a cash inflow of CHF 1.2 billion was reflected in the operating liabilities. Net payments to tax authorities related to income taxes were CHF 0.5 billion in 2010, almost unchanged from the previous year.

Investing activities

Net cash flow used in investing activities was CHF 25.7 billion compared with cash flow used in investing activities of CHF 20.6 billion in 2009.

The net cash outflow for the purchase and disposal of property and equipment was CHF 0.3 billion. The net investment in financial investments available-for-sale was CHF 25.6 billion. Disposals of subsidiaries and associates in 2010 generated a cash inflow of CHF 0.3 billion.

➔ Refer to “Note 36 Business combinations” and “Note 38 Reorganizations and disposals” in the “Financial information” section of this report for more information about our investing activities.

Financing activities

In 2010, financing activities generated net cash inflows of CHF 1.8 billion. This reflected the cash outflow for redemptions and dividends paid for preferred securities reflected in non-controlling interests of CHF 2.1 billion, the issuance of CHF 78.4 billion of long-term debt and the long-term debt repayments, which totaled CHF 77.5 billion. The money market papers issued generated a net cash inflow of CHF 4.5 billion. In 2009, UBS had a net cash outflow of CHF 54.2 billion from financing activities.

2009

As of 31 December 2009, the level of cash and cash equivalents declined to CHF 165.0 billion, down CHF 14.7 billion from CHF 179.7 billion at the end of 2008.

Operating activities

Operating activities generated a cash inflow of CHF 54.5 billion in 2009 compared with a cash inflow of CHF 77.0 billion in 2008. Operating cash inflows (before changes in operating assets and liabilities and income taxes paid, net of refunds) totaled CHF 9.9 billion in 2009, an increase of CHF 81.5 billion from 2008. Net profit improved CHF 18.6 billion compared with 2008.

Cash inflow of CHF 127.7 billion was generated by the net decrease in operating assets, while a cash outflow of CHF 82.5 billion was reflected in the operating liabilities. Net payments to tax authorities related to income taxes were CHF 0.5 billion in 2009, down CHF 0.4 billion from the previous year.

Investing activities

Net cash flow used in investing activities was CHF 20.6 billion compared with cash flow used in investing activities of CHF 1.7 billion in 2008.

The net cash outflow for the purchase and disposal of property and equipment was CHF 0.7 billion. The net investment in financial investments available-for-sale was CHF 20.1 billion, an increase due to our strategic decision to rebalance our liquidity reserve which led to a shift from reverse repurchase agreements and trading portfolio. Disposals of subsidiaries and associates in 2009 generated a cash inflow of CHF 0.3 billion mainly related to the sale of UBS Pactual.

Financing activities

In 2009, financing activities generated net cash outflows of CHF 54.2 billion. This reflected the net repayment of money market paper of CHF 60.0 billion, the issuance of CHF 67.1 billion of long-term debt and the long-term debt repayments, which totaled CHF 65.0 billion. That outflow was partly offset by inflows attributable to capital issuances of CHF 3.7 billion. In 2008, UBS had a net cash outflow of CHF 5.6 billion from financing activities.
Our employees

The excellence, inspiration and commitment of our employees are critical to implementing our business strategy and to meeting the needs of our clients. Our commitment to our employees is reflected in the investment we make in managing talent, and in the development of our performance-oriented culture and our leadership.

Our workforce

In 2010, we focused on enhancing integration across the firm and investing in our workforce by making a number of improvements to the way we managed our employees. For example, we instituted measures to further develop our performance-oriented culture and revised our Code of Business Conduct and Ethics (the Code) to clearly set out the principles and practices we expect all our employees to follow. Additionally, we launched a corporate university to provide more training opportunities and promote continuous development.

During 2010, our employees were responsible for helping to rebuild our businesses and were fully engaged in regaining client trust. We judiciously invested in recruiting, managing, training and retaining talented employees who have the skills, experience and drive to meet our clients’ needs and grow our businesses.

Internal mobility encourages integration, collaboration and business innovation, and supports individual career development. We continue to support employee mobility across regions and business divisions. In 2010, 489 employees moved to roles in a different region, compared with 910 in 2009. During the course of the year, 1,290 employees transferred between business divisions, compared with 993 in 2009.

Employee turnover, or terminations as a percentage of average overall headcount, was 14.6% in 2010. Employee-initiated turnover was 8.9%, down 0.8% from 2009. In general, employee levels stabilized over the course of the year, with the number of people employed on 31 December 2010 at 64,617, down 616 or 1% from year-end 2009. In 2010, our employees worked in 57 countries, with approximately 36% of our staff employed in the Americas, 36% in Switzerland, 17% in Europe, the Middle East and Africa and 11% in Asia Pacific.

Recruiting new employees

We are committed to retaining and developing highly qualified employees and to actively recruiting new talent to build our businesses. In 2010, our recruiting efforts focused on meeting the growing demand for staff while continuing to reduce the cost of hiring through increased emphasis on internal hiring, greater efficiency in recruiting operations and reductions in external recruiting costs. Positions we desire to fill increased 145% from 2009, with 136% growth in the number of positions that were actually filled in 2010.

We strive to create a timely, professional and positive experience for candidates. In 2010, we filled 9,101 positions across the firm. Hiring was most visible in the Investment Bank, with 2,360 positions filled in 2010. A top priority for 2010 was to hire experienced client and financial advisors across our strategic growth areas. In 2010, Wealth Management & Swiss Bank hired around 300 client advisors globally, while 278 experienced financial advisors were hired in Wealth Management Americas.

In 2010, 773 university graduates joined UBS as part of our undergraduate and MBA graduate training programs. An additional 988 interns were hired globally over the course of the year, while our apprenticeship program in Switzerland hired 287 apprentices.

Several new recruiting initiatives were launched in 2010 to ensure there is a continuous and visible presence on our target campuses, consistent with our commitment to graduate hiring. We continue to provide unique educational opportunities for graduates that include business-specific activities.

Strengthening and sustaining our diverse workforce

A workforce of individuals from widely different backgrounds, cultures and life experiences is essential in today’s global business environment. This is in part because having a diverse employee base and inclusive work environment increases the performance and engagement of our employees. In 2010, our workforce was comprised of citizens from 147 countries; the average age of our employees was 38 years, and the average length of employment with the firm was 8.6 years. Diversity in gender, ethnicity, age and other factors supports first-hand understanding of regional markets, sensitivity to local customs and awareness of other personal preferences. We believe that we also gain a competitive advantage from more subtle differences in background, experience and thought. These elements provide the perspective from which our employees can anticipate needs and generate solutions for our increasingly diverse client base worldwide. In the end, our long-term success depends on equal employment opportunity and having the best people in the right roles.

Building and maintaining a workforce of highly talented individuals demands an open-minded, inclusive and respectful working culture, merit-based career advancement and a sense of individual contribution. In recent years, we have promoted diversity in three stages: (i) raising basic awareness; (ii) integrating diversity into the employee experience through recruiting, performance management and retention; and (iii) working to ensure that diversity ultimately becomes a self-sustaining part of our culture.

The scope of our diversity strategy and initiatives is both global and regional. As part of our global top-down accountability strategy in 2010, senior management and Human Resources (HR) jointly developed divisional diversity goals relating to representation, retention and work environment/culture. While it is premature to quantify accomplishments, particularly in the first year after the firm’s restructuring, quantitative and qualitative methods will be used to monitor progress in 2011.

Regional diversity teams translate our global commitment into action by working with local business and HR leaders on business-aligned plans linked to regional talent strategies. In 2010, initiatives that were previously launched in Europe, the US and several other regions made progress in creating a culture in which men and women thrive equally in their careers, where gender differences are an asset, and where different working styles and practices enable us to improve our service to clients. In one initiative piloted in the UK, France and Germany, we focused on hiring and developing talented professional women, working with them to create individual development plans, assigning sponsors and providing educational opportunities. Other regional diversity initiatives included a US Women’s Leadership Conference, where approximately 300 women employees participated in an all-day workshop focusing primarily on individual career development.

*Gender distribution by geographical region [1]*

On 31.12.10

1. Calculated on the basis that a person (working full-time or part-time) is considered one headcount in this graph only. This accounts for the total UBS end-2010 employee number of 66,782 in this graph, which excludes staff from UBS card center, Hotel Seepark Thun, Wolfsberg and Widder Hotel.
Global network guidelines enable employees to set up or join employee networks/affinity groups in any of our operating regions. We have more than 20 employee networks to help build cross-business relationships and strengthen our inclusive culture.

Regarding the role of equal employment opportunity, our HR policies and processes have global coverage and outline our commitment to non-discrimination and equal opportunity for all employees.

In 2010, we received a 100% rating in the Human Rights Campaign Foundation’s 2010 Corporate Equality Index (US), Top 25 Most LGBT Friendly Corporations in the World in the International Gay & Lesbian Chamber of Commerce (IGLCC) Index 2010, the National Black MBA-WGC “Corporate Sponsor” award (US), the Equal Opportunity for Women in the Workplace Agency (EOWA) Employer of Choice For Women citation (Australia), and UBS Japan was awarded “Qualified Employer who Supports the Growth of the Future Generations” (through 2012).

Managing performance
Helping employees perform at their highest level is a year-round process that plays a key role in strengthening our performance-oriented culture. We believe employees are better motivated, more committed and more productive if they participate in effective performance management processes. Since 1996, we have employed a process that assesses demonstrated results and behaviors and is supported by ongoing employee-manager dialogue.

Our approach to people management

In 2010, we made a number of critical changes to our performance management process. There are two fundamentally new elements: an evaluation process that clearly differentiates an employee’s performance relative to peers and allocates compensation accordingly, and significantly more transparent communication to employees about all of our performance management processes. Notably, an employee’s overall compensation will now be more transparently linked with the value of their individual contributions. These changes are expected to drive even stronger performance at all levels, enable better delivery of our strategy and ultimately contribute to our long-term sustainable profitability. In 2010, 97% of eligible employees participated in this process.

Performance management for our most senior executives is even more rigorous than for other employees. Input from peers is required, and a more comprehensive evaluation is completed based on key achievements, business performance, risk management, leadership skill and specific financial targets. In 2010, we enhanced our performance management procedures for key risk takers/controllers. By the nature of their role, these individuals have been determined to be able to materially commit, deliver or control the firm’s resources and/or exert significant influence over UBS’s risk profile. We now ensure that a holistic evaluation is conducted by relevant control functions on an annual basis. A sample of senior management and key risk-taker performance objectives are also reviewed annually.

We have Group-wide ranks (Non-Officer, Authorized Officer, Associate Director, Director, Executive Director and Managing Director) and salary ranges that are applicable to all employees. In 2010, we standardized our rank and role classification model, with all business divisions and the Corporate Center following the same model. Global role profiles now form the basis for all of our HR processes and enable us to create and implement more clearly defined career paths for all employees.

Compensation
We strive to provide our employees with market-competitive pay and incentives. Our approach recognizes the need to compensate individuals for their business performance within the context of increasingly competitive market conditions, a fast-changing commercial environment and evolving regulatory oversight. At the same time, ensuring the long-term success of the firm is our foremost priority.

Our compensation structure is designed to be appropriately balanced between fixed and variable elements. Emphasis is

placed on the variable component as an incentive to excel and to foster a performance-driven culture, while supporting appropriate and controlled risk taking. Our Total Reward Principles are the foundation of our compensation programs. We always take a holistic view of employee compensation within a total reward framework that takes into account base salary, discretionary incentives and benefits.

→ Refer to the “Compensation” section for more information

Employee share ownership
We support employee share ownership in principle because we believe that personal accountability for business actions and decisions can be encouraged through equity-based awards that vest and/or become unrestricted over time. In 2010, we changed some terms of Equity Plus, our voluntary equity-based program. Under the new program terms, employees are able to purchase shares at market price and receive one free share for every three shares purchased. These free shares vest within three years, subject to continued employment at UBS.

On 31 December 2010, current employees held an estimated 6% of UBS shares outstanding (including approximately 4% in unvested/blocked shares), based on all known share holdings from employee participation plans, personal holdings and individual retirement plans. At the end of 2010, an estimated 55% of all employees held UBS shares, while an estimated 50% held UBS stock options.

Education and talent development
We take a structured approach to both leadership development and business education to ensure our employees have the knowledge and skills required to meet our business needs and support our strategic goals. In January 2010, we launched the UBS Business University, a global and largely virtual corporate university that integrates our learning activities under one umbrella. The Business University effectively aligns all training and education elements across the firm and promotes a culture of continuous development. Having one Group-wide learning organization also leverages the expertise within our various former learning organizations, increases efficiency, eliminates duplication and significantly reduces training costs, while focusing on positively impacting business results.

One of the Business University’s primary goals is to enhance the ability of our senior leaders and key talent to build a unique and effective leadership culture and put our strategy into practice. A series of leadership development offerings, executive coaching and new hire programs equip our current and future leaders to deliver results to clients and colleagues.

A comprehensive business education offering is provided through more than 70 role-specific learning pathways. These learning pathways consist of a structured sequence of activities that help ensure consistent training across similar job roles worldwide. Client-facing staff participate in specialized advisory and sales training that enables them to more effectively meet clients’ needs. They also engage in training that fosters cross-divisional collaboration so that clients can benefit from solutions reflecting all our business divisions. Programs like these help drive our one-firm approach and leverage our unique product offerings.

All of our employees can access a broad range of professional development training, including learning modules on understanding, managing and controlling risk, general finance and mandatory legal and compliance topics.

In 2010, our employees participated in a total of 453,000 training experiences across all of the Business University’s offerings, averaging almost seven training experiences per employee.

We also invest in talent development and succession planning for the most critical roles across the firm. An annual firm-wide talent review helps to identify and build the skills and competencies of employees who are recognized to have leadership potential. In addition, potential successors for senior leadership roles are identified and tracked on a firm-wide basis.

Building a leadership culture
In 2010, the UBS Business University worked closely with the Group Executive Board (GEB) and the business divisions to put our new strategy into practice, and to further develop our leadership culture. The Business University also supported the design, development and roll out of our GEB-sponsored “Leading UBS forward” employee training program (which will continue into 2011). The program raises awareness and understanding of our strategy and identity, our values and our strategic principles. Face-to-face workshops open to all employees are led by “ambassadors” who are nominated senior employees from across the firm.

These sessions provide an opportunity for everyone to better understand key components of our strategy, commit to changing our culture, and embed our values in their daily work.

Commitment

Meeting the needs of clients is a core objective for UBS, and relationships based on respect, trust and mutual understanding are the foundation for our success. The Code sets out the principles and practices that all employees are expected to follow. It also underscores the critical importance of responsible corporate behavior. In 2010, we put in place a process to affirm the Code and provided training to all employees. We are committed to upholding our corporate values of truth, clarity and performance. They are integrated into our corporate decision making and people management processes, and are aimed at shaping the daily actions of our employees.

Employee assistance

We are dedicated to being an attractive and supportive employer. Employee benefits such as insurance, pension, retirement and time off are competitive in our local markets. We also offer additional, innovative benefits to employees where practical. One example is that we encourage and support our employees’ efforts to volunteer in the many communities in which we operate.

To help employees better manage life and work issues, we offer employee assistance programs (EAP) in a number of locations. In the UK, the EAP provides access to specialist support on topics such as finances, family, bereavement and legal/consumer rights. A health and well-being program provides an on-site general practitioner, physiotherapist and dentist as well as occupational health services and an emergency back-up childcare and eldercare facility.

In the US, the EAP, known as the Work/Life Assistance Program, provides around-the-clock counseling and referral services to employees and their families to assist them in resolving issues that may affect their health, personal life, or job performance. The program also provides information about work-life effectiveness and offers referral services for child care, prenatal care, summer care, adoption, academic services and adult care. We also provide on-site childcare at our Stamford, Connecticut site and emergency/back-up child care in most other US locations.

Employee assistance initiatives in Asia Pacific are generally conducted on a country-by-country basis. In Hong Kong, for example, consultants from an external EAP provider work with employees and their immediate family members on issues of work and life stress, family, mental health, personal development or other personal or work-related challenges.

In Switzerland, assistance for current and retired employees, as well as family members, is provided through our HR Social Counseling and HR Retiree Services functions. Services include counseling for personal issues, difficulties in the workplace, sickness, financial difficulties and retirement. As an additional, complementary service for employees, an internal Ombudsman’s Office was opened in July 2010. HR Health Care considers local health and safety matters and coordinates the UBS Care Team. Work days lost to accident or illness are tracked, with 18,915 and 103,635 days respectively accounted for in 2010.

In Switzerland, we have a long-standing initiative called COACH to help redeploy employees within UBS, or help them find jobs outside the firm in the event of a restructuring. Advisors in the COACH transfer and severance process provide support and assistance in finding a new job by working closely with our internal recruitment center and outside employment services. During the COACH process, employees retain full salary and benefits, and financial assistance is available for job-related training, if needed.

Staff below the Director level are eligible for the Social Partnership Agreement for employees in Switzerland (SOVIA CH). SOVIA CH lays out the terms and conditions for implementing redundancies among employees whose jobs are subject to the Agreement on Conditions of Employment for Bank Staff. SOVIA CH governs the requirements and procedures for internal hiring, job transfers, and, when needed, severance. The aim is to implement necessary job cuts and operational changes in a responsible manner, making full use of our internal labor market, and to offer targeted, relevant support and career advice to these employees.

Employee representation

As part of our commitment to being a responsible employer, we partner with all of our employee representation bodies to create an active dialogue between employees and management. In 2010, we worked with the European works councils to implement changes in our performance management processes, entering into local consultations where appropriate.

The UBS Employee Forum (UBSEF) was established in 2002, and has representation from 18 countries across Europe, notably Austria, France, Germany, Luxembourg, Switzerland and the UK. The UBSEF facilitates the open exchange of views and information on pan-European issues that have the potential to impact our regional performance, prospects and operations, and fulfills EU Directive 94/45 on the establishment of a European Works Council. Local forums exist across Europe to address issues such as health and safety, changes to workplace conditions, pension arrangements and consultation on collective redundancies and business transfers.

In Switzerland, for example, the Employee Representation Committee (ERC) partners with UBS management in annual salary negotiations, and represents employee interests on specific topics outlined in the collaboration and co-determination clauses of personnel regulations. It also fosters an open dialogue between employees and management through a variety of channels and activities. ERC representatives are elected to represent employees whose work contracts are governed by Swiss law and the Agreement on Conditions of Employment for Bank Staff. The UK Employee Forum (UKEF), which is formed from elected representatives from all of our UK businesses and appointed management representatives, focuses on local economic, financial and social activities of concern to UK employees. It may also be used for defining workforce agreements affecting UK employees.

Collectively, the UBSEF, including the ERC and UKEF, represents over 40% of our global workforce.
In 2010, we took strides to enhance our performance in all areas of corporate responsibility. An important foundation for this progress was the revision of our Code of Business Conduct and Ethics. It underscores the critical importance of responsible corporate behavior, and defines how we are to behave when dealing with our stakeholders.
Led by the Head of Global AML Compliance, our efforts to fight money laundering, corruption and terrorist financing are supported by a network of expert global business teams. We are streamlining our policies and processes to enhance consistency between business divisions, as well as to assess threats and risks within the business. We have developed extensive policies intended to prevent, detect and report money laundering, corruption and terrorist financing. These policies seek to protect the firm and our reputation from those who may be intending to use UBS to legitimate illicit assets.

➔ Refer to the discussion on combating financial crime below for more information on our AML activities

The global diversity team supports senior management and HR business partners in developing diversity-related strategies and goals for each business division. The implementation of these strategies and goals is monitored by the GEB. The global diversity team also coordinates regional efforts and integration into the HR process. Regional diversity heads, along with senior business managers, consider and design diversity and business-aligned plans that are linked to regional and divisional business and talent strategies. They also provide regional support for divisional management in assessing the progress made on relevant diversity objectives. Additionally, regional diversity heads support our numerous employee networks, including the development and coordination of diversity-related events which support regional diversity initiatives.

➔ Refer to the “Our employees” section of this report for more information on labor standards and diversity programs

Community affairs at UBS are founded on a global strategy defined by the GEB, and are based on a global community affairs guideline. Activities are governed by a central framework and regional guidelines and embedded in UBS’s regional structures. Every region has a dedicated community affairs team which coordinates charitable commitments by our firm and our employees. The Corporate Center ensures global coordination of these activities and also provides a central reporting structure to collate community investment data from across UBS as a whole.

➔ Refer to the discussion on community investment below for more information on our charitable and related activities

Our corporate responsibility governance process

External commitments and initiatives
In implementing environmental and social standards and conventions into our business practices, we benefit from participating in various external initiatives, including the UN Global Compact and its local network in Switzerland; the Wolfsberg Group; the UNEP Finance Initiative (UNEP FI); the UN Principles for Responsible Investment (UNPRI); and the VfU (Association for Environmental Management and Sustainability in Financial Institutes). In November 2010, we hosted the annual UNEP FI/VfU Roundtable, which took place in Switzerland for the first time. At the event, key sustainability topics such as climate change and human rights as well as related topics, ranging from environmental, social and governance (ESG) ratings to sustainability education at universities, were considered and discussed among representatives from financial institutions and various stakeholders.

In June 2010, UBS participated in the triennial UN Global Compact Leaders Summit which, chaired by the UN Secretary-General, brought together 1,200 representatives from companies and civil society, government and the United Nations to explore the role of responsible business in achieving more sustainable and inclusive markets.

As part of expanding our external commitments, we concluded a three-year partnership with the Smith School of Enterprise and the Environment at Oxford University. The partnership supports our work towards achieving our own environmental commitments, as well as enhances our focus on the client-related aspects of climate change and other global environmental challenges we face. In particular, we will continue to fund and participate in the Smith School’s multi-year research project on low-carbon mobility.

External ratings, assurance and awards
Our performance and efforts were reflected in key external ratings and rankings, which take into account sustainability issues. We were named an index component for the Dow Jones Sustainability Index (DJSI) World, and are a member of the FTSE4Good index series. We have been a continuous member of both indices.
since their inception. In 2010, we increased our total score for the DJSI World, mainly due to substantially improved performance in the economic dimension and an increased performance in the environmental dimension.

We also featured in the Carbon Disclosure Project’s Carbon Performance Leadership Index (CPLI) for 2010. The CPLI comprises 48 companies within the FTSE Global Equity Index Series (Global 500) that have demonstrated commitment to strategy, governance, stakeholder communications, and, above all, emissions reduction in their disclosures to the Carbon Disclosure Project. The companies featured in the CPLI have the distinction of having the leading carbon performance scores among all Global 500 companies, indicating both high degrees of maturity in their climate change initiatives and achievement of their objectives. Our inclusion in the CPLI reflects the success of our climate change strategy, which was launched in 2006.

In 1999, we were the first bank to obtain ISO 14001 certification for our worldwide environmental management system. The management system covers the entire scope of our products, services and in-house operations, which may give rise to an environmental impact. It is audited annually and re-certified every three years by SGS, a leading inspection, verification, testing and certification company. These comprehensive audits verify that appropriate policies and processes are in place to manage environmental issues, and that they are executed in day-to-day practice. In 2010, SGS confirmed that a well-performing environmental management system, integrated in the organization and suitable for managing environmental risks and improving environmental performance on a continual basis, is in place.

We earned top-three places in each of the key rankings for brokerage firms in the 2010 Thomson Reuters Extel and UKSIF Socially Responsible Investing & Sustainability Survey: “Socially Responsible Investment (SRI) Research”, “Long-Term Thematic Research”, “Corporate Governance Research”, “Renewable Energy Research”, and “Integrated Research on Climate Change”.

In January 2010, our UK operations were awarded the Carbon Trust Standard for “reducing CO₂ emissions year-on-year”. In the US, our building at 1285 Avenue of the Americas in New York City was awarded Leadership in Energy and Environmental Design for Existing Buildings CI Gold certification for their fit-out of the 12th floor. In Chicago, we improved our standard at 1 North Wacker to Silver certification.

Finally, in late 2010, we ranked fourth globally and second in Switzerland in the annual CSR Online Awards. The global survey examines the websites of 91 DJSI member companies, to see how they are used as platforms for communicating corporate social responsibility. According to the survey results, our adoption of web-based reporting, where our corporate responsibility website serves as our sustainability report, allows us to present vast and detailed corporate social responsibility information to stakeholders who wish to gain a comprehensive understanding of our corporate responsibility efforts.

⇒ Refer to the “Our employees” section of this report for information on diversity awards

Stakeholder dialogue and capacity building

Dialogue with external parties is an important contributor in our understanding and approach to corporate responsibility. In 2010, communications with experts and stakeholders covered a series of topics ranging from broad (e.g. implementation of the Code) to more specific issues, including, for instance, discussions with non-governmental organizations on the topic of human rights.

Input on the corporate responsibility strategy and activities we pursue is also regularly sought from employees. An internal, cross-divisional network of experts plays a particularly important role, with its members providing critical input on stakeholder expectations and concerns. These contributions are provided to the CRC and add valuable features to the information gathered through other established monitoring channels.

Training and awareness-raising

Through education offerings and broader awareness-raising activities we ensure that our employees are aware of the importance of UBS’s social commitments. General information is published on our intranet and on the corporate responsibility website. In 2010, training and awareness-raising activities focused on the Code (notably a mandatory web-based training), and ensured that all employees were made aware of the firm’s corporate responsibility strategy and activities. Furthermore, some 10,000 employees participated in training on environmental issues, with over 8,600 receiving general education on our environmental policy and programs, and nearly 1,400 employees receiving specialist training targeted within their area of expertise and impact. Employee speaker sessions, exhibitions and lunchtime training sessions have been delivered in all regions alongside specific technical training for the environmental team. Employees are also required to undergo regular training in AML-related issues, which includes online training, awareness campaigns and seminars.

Responsible banking

We are focused on earning the trust of our stakeholders, aiming for sustainable earnings and creating long-term shareholder value. In ensuring that banking activities are undertaken in a responsible manner, and that products and services are suited to the needs and requirements of our clients, we aim to fulfill the heightened expectations of clients and stakeholders.

Combating financial crime

We believe it is of utmost importance to actively prevent potentially irresponsible or harmful actions. First and foremost, this means that our employees must uphold the law, adhere to relevant regulations, and behave in a responsible and principled manner.

In 2010, we continued to strengthen our efforts to both prevent and combat financial crime. By taking responsibility to preserve the integrity of the financial system, and our own operations, we are committed to assisting in the fight against money laundering, corruption and terrorist financing. We employ a rigorous risk-based approach to ensure our policies and procedures
correspond with those risks, and that relationships which are classified as higher risk are dealt with appropriately. We adhere to strict know-your-clients regulations, which do not, however, seek to undermine clients' legitimate right to privacy. Ongoing due diligence and monitoring is undertaken to assist in the identification of suspicious activities, including using advanced technology to assist in the identification of transaction patterns or unusual dealings which, if discovered, are promptly escalated to management or control functions. As part of our extensive and ongoing efforts to prevent money laundering, corruption and terrorist financing, enhancements to address more specific risks in relation to corruption and terrorist financing were implemented globally in 2010.

We are a founding member of the Wolfsberg Group, an association of 11 global banks established in 2000, which aims to develop financial services industry standards and related products for Know-Your-Customer, Anti-Money Laundering and Counter Terrorist Financing policies. The Group continues to update existing publications it has produced over the last nine years, and a revised version of the Trade Finance Principles will be published in 2011. Together with the other members of the Group, we continue to engage actively with the Financial Action Task Force (FATF), an inter-governmental body that develops and promotes national and international policies to combat money laundering and terrorist financing in the context of its consultation processes with the private sector. At the end of 2010, the FATF announced that it is reviewing the 40+9 FATF Recommendations, and the Wolfsberg Group will provide comments and feedback within the consultation process, which will extend into early 2011.

Managing environmental and social risks

Environmental and social risk is broadly defined as the potential reputational or financial damage resulting from transactions, products, services or investments that involve a party associated with environmentally or socially sensitive activities, or potential exposure to risks relating to environmental liabilities, human rights infringements, or changes in regulations.

We identify, manage and control these environmental and social risks in our business transactions. However, not all products and services we provide have the same risk potential. Therefore, we take a risk-based approach to environmental and social risk management, and regularly analyze our portfolio of products and services to assess their respective environmental and social risk potential. With our current business profile and operating environment, our potential for material risk is greater within the context of our lending, capital markets and mergers businesses, as well as our direct real estate and infrastructure investments. For these products and services, we have designed procedures and tools for the identification, assessment and management of environmental and social risks. These procedures and tools are integrated in the business divisions’ standard risk management processes, such as due diligence on transactions or investments, and ensuring that material environmental and social risks are identified, assessed and escalated in a timely fashion.

In terms of approval processes, the business divisions are responsible for the identification and assessment of risk, and for determining whether the identified risks are acceptable (in 2010, the business divisions referred 194 transactions to their environmental risk functions for a detailed environmental assessment). In the event that any such identified risks are also determined to create potential firm-wide reputational risk, they are escalated to the Group environmental representative for approval. We believe that our commitment to our clients and to society requires us to search for solutions whenever possible. We seek to help clients to move towards more environmentally and socially responsible practices by engaging with them. This can benefit their business and decrease financial and reputational risk. However, where engagement is not possible or successful, we may decline the transaction altogether.

Some of our clients operate in sectors characterized by ongoing environmental and social challenges. To support the consistent identification and assessment of such risks, we developed internal industry sector guidelines in 2009. The guidelines currently cover six sectors: chemicals, forestry products and biofuels, infrastructure, metals and mining, oil and gas, and utilities. These guidelines have been adopted by each of our business divisions in transactional and client due diligence processes.

In 2010, we decided to further strengthen our environmental and social risk management (including human rights) by identifying controversial activities where we will not do business, or only do business under stringent pre-established guidelines. Therefore we will not knowingly provide financial services to corporate clients, nor will we purchase goods or services from suppliers, where the use of proceeds, primary business activity, or acquisition target involves the following environmental and social risks:

- Extractive industries, heavy infrastructure, forestry and plantations operations that risk severe environmental damage to or through:
  - Endangered species of wild flora and fauna listed in Appendix 1 of the Convention on International Trade in Endangered Species;
High conservation value forests as defined by the six categories of the Forestry Stewardship Council (FSC);

Illegal use of fire: uncontrolled and/or illegal use of fire for land clearance;

Illegal logging including purchase of illegal harvested timber (logs or roundwood);

Palm oil production unless a member in good standing of the Roundtable on Sustainable Palm Oil and actively seeking to enhance certification of its production;

Wetlands: on the RAMSAR list; and

World heritage sites as classified by UNESCO.

All commercial activities that engage in, or threaten:

- Child labor: according to ILO-conventions 138 (minimum age) and 182 (worst forms);
- Forced labor: according to ILO-convention 29;
- Indigenous peoples’ rights in accordance with IFC Performance Standard 7; and
- Diamond mining and trading of rough diamonds unless Kimberly Process certified.

We also require enhanced due diligence and approval processes in certain other areas, such as coal mining practices that use mountain top removal (MTR) in the US Appalachian Mountains as an extraction method. As part of this review, we assess to what extent companies rely on MTR mining for their revenue generation, and we need to be satisfied that the client is committed to reducing its exposure to this form of mining over time.

Finally, Global Asset Management decided not to invest in companies involved in the production of weapons banned under the 2010 Convention on Cluster Munitions and the 2008 Convention on Anti-Personnel Mines. The policy applies and has been implemented for its actively managed Switzerland and Luxembourg domiciled retail and institutional funds.

Products and services

Equally important to managing environmental and social issues is providing financial products and services, which help clients manage their environmentally and socially-related business opportunities and risks. We seek to help investors benefit from related market opportunities, and by integrating environmental and social considerations, where relevant, in research and investment analysis. This offering currently stretches across our businesses in wealth management, investment banking, asset management, retail, and commercial banking. It includes SRI funds, research and advisory services provided to private and institutional clients, access to the world’s capital markets for renewable energy firms and, in Switzerland, “eco” mortgages.

Taking ESG issues into account in investment processes is of increasing interest to clients and consultants across all of our investment areas. Since 2009, Global Asset Management has demonstrated commitment to ESG as a signatory to the UN Principles for Responsible Investment (UNPRI). The Principles provide a voluntary framework by which all investors can incorporate ESG issues into their decision-making and ownership practices to better align their objectives with those of society at large.

As part of a holistic service offering, our Wealth Management & Swiss Bank and Wealth Management Americas business divisions have established combined teams for philanthropy and values-based investing/SRI. The teams provide thought leadership, advice, products and solutions to assist our clients and prospects in delivering positive change through their philanthropy and investments.

Building on our existing SRI practice, we experienced increased client demand and have expanded our SRI offering by providing investment management and screening services. These services include sustainability-focused alternatives to conventional products, mission-related investing for donor-advised funds and private foundations, values-based portfolio management, such as mandate solutions for private clients with a strong focus on sustainability across all asset classes, portfolio review and proposals for the integration of sustainability into stock or bond selection.

Finally, our senior scientific advisor, Sir David King, continued to advise on all scientific matters with particular emphasis on global climate change and the challenges it poses to sustainable economic growth. Our clients benefit from Sir David’s expertise, and can get further insight into a variety of timely scientific topics through a quarterly series of science-focused bulletins. In 2010, these bulletins included briefs on climate change and air travel.

Investment products and advisory

In 2010, we continued to offer SRI funds and segregated mandates in response to sustained demand from a number of markets globally. The offering is diverse and includes products managed according to ESG criteria and theme-based approaches, which are focused on innovative companies providing solutions to the challenges of climate change, water scarcity and demographic change. We offer a range of products focusing on each individual theme and the flagship UBS (Lux) Equity Fund Global Innovators, which spans all three themes.

Additionally, we offer customized client portfolios in the form of segregated mandates/institutional accounts based on “negative” screening, which exclude certain controversial stocks or sectors based on their negative social or environmental impact, as perceived by the client. Our global platform and investment research capabilities enable us to offer such tailor-made solutions. In addition to fund management services, we provide stock-brokering and account management services to alternative energy and SRI fund managers.

Finally, this offering includes SRI-managed accounts in the US, where ESG criteria are embedded into the fundamental investment process, or where clients have the ability to identify and exclude securities from ownership based on issue-oriented screens. This allows private clients to customize mandates to their particular social policy criteria. In addition, our open architecture approach also allows clients to invest in SRI bond, equity and microfinance products from leading third-party providers.
In past years, we experienced increasing client demand for SRI and expanded our SRI product offering. As per 31 December 2010, SRI invested assets were CHF 25.7 billion, representing 1.2% of our total invested assets.

Engagement and voting rights
The Global Asset Management SRI team in Switzerland engages in dialogue with companies represented in the SRI funds they manage. The analysts and portfolio managers provide positive and negative feedback on relevant ESG issues that may impact investment performance, as part of regular communication with corporate management teams. When controversial information on the company’s environmental and social performance is received, the SRI analysts contact the company and provide management with a chance to demonstrate what measures have been taken to solve the issues. If the company can demonstrate how it is dealing with the problem, and what progress has already been achieved, an investment is possible. These engagement activities are, in addition to the positive screening processes, applied to the SRI funds.

We believe that voting rights have economic value and should be treated accordingly. Global Asset Management, wherever possible, seeks to influence the corporate responsibility and corporate governance practices of the companies it invests in. Where we have been given the discretion to vote on behalf of our clients, we will exercise our delegated fiduciary responsibility by voting in a manner we believe will most favorably impact the value of their investments. Good corporate governance should, in the long term, lead towards both better corporate performance and improved shareholder value. As such, we expect board members of companies in which we have invested to act in the service of their shareholders, view themselves as stewards of the company, exercise appropriate judgment and practice diligent oversight of the management of the company.

In 2010, Global Asset Management in Switzerland launched UBS Voice, a free service enabling holders of Swiss institutional funds to express voting preferences ahead of the shareholders’ assembly of major Swiss corporations, to be used as additional input in the voting decision of the funds management company.

Research
Our SRI research teams focus on a range of ESG issues, with a view to understanding what impact developing secular trends such as demographics, resource constraints, and other potential environmental and social constraints might have upon the sectors and companies covered by our analysts.

Our SRI research teams were established in each of our business divisions to serve their respective clients. In the Investment Bank, the equity research team launched major UBS publications on water in 2006, climate change in 2007, and corporate governance in 2008. In 2010, the team launched the ESG Analyzer, a publication that helps clients take ESG issues into consideration at every stage of the investment process. In the asset management business, an internal SRI research team manages portfolios around themes such as climate change/energy efficiency, water and demographics. The SRI research team in our wealth management business conducts SRI research and provides advice to private clients on SRI investment solutions.

Client interest in some aspects of SRI – for instance climate change, demographics and water – has grown, and so has research coverage. The SRI teams regularly collaborate with analysts in other teams to write about emerging SRI themes, and relevant research content is regularly published by a growing number of specialists within the mainstream research effort.

Financing and advisory services
In 2010, we announced the formation of the Renewable Energy and Cleantech Group (RECG) within the investment banking department and the environmental markets group (EMG) within global capital markets to further focus our efforts and build upon our successes in this important sector. RECG provides capital raising and strategic advisory services to renewable energy and cleantech companies around the world, including those in the solar, wind and biofuels sectors. EMG will work with cleantech, utility, and industrial clients on the application of environmental policy analytics to financial decision making.

Since 2006, we have led over 35 financing transactions, raising more than USD 20 billion, and advised on over a dozen strategic

1 The terms Socially Responsible Investing and Values-Based Investing are used interchangeably. All figures are based on the level of knowledge as of January 2011. 2 Global Reporting Initiative (see also www.globalreporting.org). FS stands for the Performance Indicators defined in the GRI Financial Services Sector Supplement. 3 SRI products from third-party providers apply either positive or exclusion criteria or a combination thereof. 4 2.4% of reported assets have newly been included in 2010 due to adjustments in the reporting boundaries. 5 Total SRI/UBS’ invested assets.
transactions for renewable energy and cleantech companies. During 2010, we led the USD 644 million initial public offering of China Datang Renewable Power Company, China’s second largest wind power generation company; advised Hanwha Chemical Corporation on their USD 370 million acquisition of a 49.9% stake in Solarfun, one of the world’s leading manufacturers of solar modules; and led equity financings totaling USD 355 million for GT Solar, a major provider of manufacturing equipment to the solar sector.

Carbon trading
In cap and trade emissions markets, such as the EU Emissions Trading Scheme (EU ETS), companies have annual caps on the amount of emissions their facilities are allowed to produce. Companies that are able to reduce their emissions below their cap have the ability to sell their unused quota to other entities, thereby creating an emissions market. Through the use of financial instruments, we are able to help clients manage their exposure to the emissions markets. UBS Exchange Traded Derivatives is an active member of the major emission exchanges in Europe and North America, and offers execution and full service clearing for contracts on EU ETS allowances, UN Certified Emissions Reductions, Regional Greenhouse Gas Initiative allowances, and permits for nitrogen oxide and sulfur dioxide.

Corporate responsibility in operations
We continue to build on a long heritage of managing our internal environmental impact, which, since the 1970s, has focused on increasing energy efficiency, reducing consumption of paper and other resources, actively managing waste volumes and encouraging our employees to replace air travel with more sustainable options. Now delivering the program through a network of global, regional and local environmental specialists, we manage an environmental management system accredited to ISO 14001 and have greenhouse gas emissions data externally verified to ISO 14064.

Environmental and CO2 footprints
We directly impact the environment in a number of ways: our businesses consume electricity and fossil fuels; employees travel for business purposes, use paper and generate waste in the course of their work; and offices require heating and cooling systems. Improving the use of these resources can reduce costs and enhance environmental performance; therefore, we have a series of measures to efficiently manage our environmental impact.

CO2 strategy and emission reduction
In February 2006, the GEB decided to set a Group-wide CO2 emission reduction target of 40% below 2004 levels by 2012. We seek to achieve this target by:
– adopting in-house energy efficiency measures that reduce energy consumption in the buildings we operate;
– increasing the proportion of renewable energy used limiting emissions at source; and
– offsetting CO2 emissions that cannot be reduced by other means (i.e. business air travel).

As a result, we further reduced our 2010 CO2 emissions, with an overall global reduction now reaching 33.5% below 2004 levels, another step toward achieving our 2012 target.

Energy consumption and efficiency
Energy consumption represents an important environmental impact area, and is the biggest contributor to our overall greenhouse gas emissions. In line with our wider business strategy, improvements in energy efficiency have helped to reduce both emissions and costs. Energy consumption is down year-on-year through a combination of building portfolio management, more dynamic building controls, data center efficiency and improved employee housekeeping. Our IT-driven initiatives contributed significantly to these energy savings, most notably through a server consolidation program, and the early phase of our Desktop Transformation Program that is deploying the latest in business PC hardware and software.

Renewable energy
In addition to our energy efficiency programs, we are reducing our use of carbon-intensive energy by including a high proportion of renewable energy. The percentage of renewable energy and district heating purchases was 43% in 2010.

Business travel and offsetting CO2 emissions
Having experienced a significant reduction (approximately 40%) in business-related travel in 2009 due to difficult market conditions and focus on reducing costs, it is encouraging to see that, despite an improving business landscape, employee air travel in 2010 has remained low and not returned to 2008 levels. We continue to actively promote audio and video conferencing, investing in the latest ‘telepresence’ technology to further improve quality and user experience. Recognizing the benefits of face-to-face meetings in a sector where building lasting client relationships is essential, we
continue to encourage employees to blend travel and technology to optimize work-life balance and environmental impact.

For travel within Europe, we see a continued shift towards high speed rail travel in preference to air. The marketing and events team have adopted the environmental guidelines for client conferences and now consider the impact of delegate travel, hotels, venue features and catering as part of their logistics and planning.

Once again in 2010, we have offset CO₂ emissions resulting from business travel. Working with reputable intermediaries and a panel of internal specialists, we select projects which meet our carbon volume requirements while providing positive community benefits. Schemes selected include a gold standard wind power project in Turkey and a hydro power project in Brazil.

Paper and waste
We are making a conscious effort to continuously reduce our paper consumption and waste generation. Double sided printing and copying is now default in many of our offices and, combined with an ongoing shift towards the distribution of electronic documents, has resulted in a reduction in paper used per employee of 37% since 2006. The share of office paper from Forest Stewardship Council or recycled sources has increased to 43%, with a new target for this to exceed 50% by the end of 2012. The waste recycling ratio remained flat at 54%. The implementation of binless offices in many larger locations will contribute to achieving our ambitious 2012 target of 70%.

Supply chain management
In 2010, we spent over CHF 7.3 billion purchasing products and services ranging from office maintenance across IT infrastructure to components such as stationery. Responsible supply chain management (RSCM) principles continue to embed UBS ethics and values with our suppliers, contractors, service partners and project teams. As part of this commitment we are continuing to improve our ability to identify, assess and monitor supplier practices in the areas of human and labor rights, the environment and corruption. In 2010, 265 suppliers were screened according to social and environmental criteria, 114 procurement and sourcing officers were trained, and responsible supply chain requirements were included in the arrangement with relevant suppliers who were awarded contracts. Also in 2010, we integrated RSCM principles into our global supply chain policy and into the centralized Supply & Demand Management organization.

Community investment
We are continuing the well-established tradition of supporting the advancement and empowerment of organizations and individuals within the communities we do business in. From an early focus on direct cash donations, we have progressed to a position where our community investment program encompasses employee volunteering, matched-giving schemes, in-kind donations, disaster relief efforts and/or partnerships with community groups, educational institutions and cultural organizations in all of our business regions.

Community affairs
In 2010, direct cash donations by UBS and our affiliated foundations to carefully selected non-profit partner organizations and charities totaled CHF 27.6 million. These donations were assigned, primarily, to our continuing Community Affairs key themes, “Empowerment through Education” and “Building Stronger Communities”, with some contributions to other activities, in particular disaster relief. In response to the devastating earthquake in Haiti, UBS and its employees donated over CHF 3 million to a number of organizations providing disaster relief. The funds have been used to rebuild schools and hospitals, as well as provide basic needs to many Haitians. These donations combined with other significant activities, notably the volunteering activities of employees, have continued to provide substantial benefit to projects and people around the world (as highlighted in the examples below).

Across all business regions, our employees continue to play a very active role in our community investment efforts, in particular, through their volunteering activities. In 2010, over 11,300 employees spent nearly 81,000 hours volunteering. We support their commitment by offering up to two working days a year for volunteering efforts, and also match employee donations to selected charities.

In Switzerland, our community investment efforts are also advanced by the UBS Culture Foundation, the UBS Foundation for Social Issues and Education, and the association A Helping Hand from UBS Employees. In 2010, these organizations have again made valuable contributions to important social causes, including fostering humanities and the creative arts, supporting communities in need, and helping disabled and disadvantaged people.

### Notes:

1. All figures are based on the level of knowledge as of January 2011.  
3. Global Reporting Initiative (see also www.globalreporting.org). EN stands for the Environmental Performance Indicators as defined in the GRI.  
4. Non-significant discrepancies from 100% are possible due to rounding.  
5. Specifies the estimated reliability of the aggregated data and corresponds approximately to the following uncertainty (confidence level 95%): up to 5%∗∗∗, up to 15%∗∗, up to 30%∗. Uncertainty is the likely difference between a reported value and a real value.  
6. Trend at a ***/** data quality, the respective trend is stable (⇒) if the variance equals 5/10%/15%, low decreasing/increasing (<-)> if it equals 10/20%/30% and decreasing/increasing if the variance is bigger than 10/20%/30% ( <<->).  
7. Refers to energy consumed within the operational boundaries of UBS.  
8. Refers to primary energy purchased which is consumed within the operational boundaries of UBS.  
9. Refers to primary energy purchased which is consumed within the operational boundaries of UBS.  
10. Refers to energy purchased that is produced by converting primary energy and consumed within the operational boundaries of UBS (electricity and district heating).  
11. Rail and road travel: Switzerland only.  
13. GHG footprint equals gross GHG emissions minus GHG reductions from renewable energy and CO\(_{2}\)e offsets.  
14. Offsets from third-party GHG reduction projects measured in CO\(_{2}\)e equivalents (CO\(_{2}\)e). These offsets neutralize GHG emission from our business air travel.  
15. GHG footprint equals gross GHG emissions minus GHG reductions from renewable energy and CO\(_{2}\)e offsets.
Client foundation
Charitable organizations and projects across the globe – usually in regions where UBS does not maintain a business presence – also benefit from the support of the UBS Optimus Foundation, a non-profit charitable organization which offers UBS clients a broad range of options for engaging in humanitarian activities. In 2010, the Foundation’s tenth anniversary year, Optimus can look back with justifiable pride on a success story of growth and continuous development. Now one of Switzerland’s largest charitable foundations, it has contributed over CHF 80 million to more than 170 projects in over 60 countries. All of the projects which it supports are dedicated to improving the lives of children around the world. Employing a sophisticated funding strategy, it plays a key role in bringing about positive social change in the areas which it targets: “global health” and “education and protection”. As UBS bears all the administrative costs related to Optimus, clients can be sure that 100% of every donation they make goes directly to the projects themselves.
Examples of UBS’s community investment activities across the globe

**Americas** – In 2010, we launched two unique programs. UBS brought the Big Apple Circus to Stamford, Connecticut. The non-profit circus is committed to invigorating the communities it serves by sharing the joys of a classical circus, and providing a range of community and educational outreach programs to local hospitals and schools. UBS clients, employees and their friends and families, as well as local residents, enjoyed 25 performances over the summer. Leveraging our long-standing Art Basel Miami Beach (ABMB) sponsorship, we launched miART, an art education program created to support the local Miami community year-round. MiART engaged more than 150 middle school students in ABMB through interactive activities, and will bring art education to underserved youth artists through a year-long mentoring program. The creation of a fundraising website to benefit miART and art supply drives in local UBS branches provided employees with the opportunity to support this program.

One of our signature volunteer efforts is the annual Building Brighter Futures’ Community Engagement Month in October in the US. More than 25 communities participated in 2010, with the goal of supporting community needs in the areas of education, the economy and the environment. Over 1,300 UBS employees participated in locally-driven volunteer activities. Additionally, we have long-standing volunteer partnerships with the Special Olympics and the Power Lunch reading program, which operates in four US cities. According to Maryellen Frank, an eleven-year veteran Power Lunch volunteer, “there are some days when it doesn’t feel possible to break away from the office and change your focus, but when you walk into the room and your young reading partner's face lights up, it’s all worthwhile. Spending that hour truly giving yourself has its own benefits. I usually return to the desk refreshed and ready for action.”

**Asia Pacific** – Building upon our ground-breaking Community Leadership Experience, developed in partnership with Charities Aid Foundation India in 2008, UBS subsequently developed and launched a program for Singapore non-profit sector leaders in partnership with the Centre for Non-Profit Leadership in 2009. Now in its second year, the Experience program combines a two-day residential retreat workshop with one-to-one partnering between UBS senior executives and executives of non-governmental organizations. The opportunity for both sets of leaders to interact and share experiences has proven to be highly successful, resulting in a deeper understanding of the challenges faced by the community in Singapore. Additional workshops focusing on common human resource issues, such as talent recruitment and retention, have also been organized as part of the Experience program.

**Europe, Middle East and Africa** – Throughout the region, we continue to support education and regeneration efforts, particularly in areas close to where we conduct our business. In Poland, over 75% of staff were engaged in support for low income and disadvantaged communities, and entered into an innovative arrangement with colleagues in Luxembourg to increase our contribution. In the UK, this year the firm was amongst a very small number of firms to receive three Business in the Community National Big Tick Awards for our Community Affairs program; our flagship EMEA partnership with the Bridge Academy – a local secondary school sponsored by UBS; and our employee volunteering regeneration partnership through Project Shoreditch (in Hackney, East London). In addition, a long-standing community partnership dating back to 1992 was awarded the prestigious Dragon Award by the Lord Mayor of London. The partnership reflects UBS’s overall commitment to corporate responsibility, encompassing financial contributions, employee expertise, capacity building and creating links to other community initiatives. It has led to a significant impact on the economy of a disadvantaged area of the UK, encouraging inward investment of GBP 1.5 million.

**Switzerland** – In October, more than 180 employees participated in the traditional Finance Forum sponsored walk on the shores of Lake Zurich. They were joined by 1,100 colleagues from other Swiss financial and IT firms. With CHF 50,000 raised in just two hours, our employees achieved the highest amount of all participating companies. The total amount raised by the walk (CHF 187,000) was donated to the Swiss Multiple Sclerosis Society which supports research into this disease and advises and helps families of afflicted children free of charge.

SGS STATEMENT ON ASSURANCE OF UBS GRI Sustainability Disclosure 2010

SCOPE
SGS was commissioned by UBS to conduct an independent assurance of the GRI based Sustainability Disclosure for 2010. The scope of our engagement was limited to the GRI disclosure requirements and indicators as contained in the GRI index published at www.ubs.com/gri. The scope of the assurance, based on the SGS Sustainability Report Assurance methodology, included all text and 2010 data in accompanying tables, contained in the printed Annual Report 2010 and referenced information on the webpage of UBS as quoted in the GRI index. Earlier data were not included in this assurance process.

CONTENT
The information in the report and on the webpage and its presentation are the responsibility of the directors or governing body and the management of the organization. SGS has not been involved in the preparation of any of the material included in the GRI index and acted as an independent assuror of the data and text using the Global Reporting Initiative Sustainability Reporting Guidelines 2006 as a standard. The content of this Assuror’s Statement and the opinion(s) it gives is the sole responsibility of SGS.

ASSUROR INDEPENDENCE AND COMPETENCIES
The SGS Group of companies is the world leader in inspection, testing and verification, operating in more than 140 countries and providing services including management systems and service certification; quality, environmental, social and ethical auditing and training; environmental, social and sustainability report assurance. SGS affirm our independence from UBS, being free from bias and conflicts of interest with the organization, its subsidiaries and stakeholders. The assurance team was assembled based on their knowledge, experience and qualifications for this assignment.

METHODOLOGY
The SGS Group has developed a set of protocols for the Assurance of Sustainability Reports based on current best practice guidance provided in the Global Reporting Initiative Sustainability Reporting Guidelines (2006). In a separate engagement, SGS has certified the environmental management system in accordance with ISO 14001:2004 and verified the greenhouse gas emissions in accordance with ISO 14064. The assurance comprised a combination of pre-assurance research; interviews with relevant employees; documentation and record review and validation with external bodies and/or stakeholders where relevant. Financial data drawn directly from independently audited financial accounts has not been checked back to its source as part of this assurance process.

OPINION
On the basis of the methodology described, we are satisfied that nothing has come to our attention that causes us not to believe that the information and data contained within the Disclosure referenced in the GRI index 2010 is accurate, reliable and provides a fair and balanced representation of UBS’s sustainability activities in 2010. We are satisfied that the Sustainability Disclosure as referenced in the GRI index meets the requirements of level A+ of the GRI (2006), as declared. At the same time it fulfills the requirements for Communication on Progress (COP) under the UN Global Compact. Recommendations regarding the further development of the sustainability disclosure and management system at UBS were communicated to the firm in an internal report.

SIGNED FOR AND ON BEHALF OF SGS

Dr. Christine Jasch
Lead auditor, SGS

UBS business divisions and Corporate Center
UBS business divisions and Corporate Center

– Starting from 2010, external reporting of Wealth Management & Swiss Bank was revised to better reflect management structure and responsibilities, and was split into two business units: Wealth Management and Retail & Corporate.

– The Investment Products and Services (IPS) unit was created to provide comprehensive service to Wealth Management clients with complex needs using the capabilities and expertise of the entire firm.

– In the Investment Bank, the implementation of the securities platform to unify our capabilities in equities and fixed income, currencies and commodities combined previously distinct trading and sales activities into a holistic business with the goal of improving our market position and overall client service.

– In the first half of the year, we took an important step to expand our presence into emerging markets by agreeing to acquire Link Investimentos, one of the largest independent broker-dealers in Brazil.

– The Global Family Office unit was established as a joint venture between Wealth Management and the Investment Bank to provide a cross-divisional platform for the delivery of integrated products and services.

Wealth Management & Swiss Bank

Wealth Management – In 2010, pre-tax profit increased 1% to CHF 2,308 million from CHF 2,280 million in 2009, mainly due to a 3% decrease in operating expenses. Total operating income in 2010 was CHF 7,356 million, down 2% from CHF 7,471 million a year earlier. Operating expenses declined 3% to CHF 5,049 million from CHF 5,191 million.

During 2010, net new money outflows declined to CHF 12.1 billion from CHF 87.1 billion in 2009. International wealth management net new money outflows declined significantly to CHF 12.9 billion from CHF 79.9 billion. While Europe saw ongoing net outflows, net inflows were recorded in the Asia Pacific region as well as globally from ultra high net worth clients. Swiss wealth management reported net inflows of CHF 0.8 billion in 2010 compared with CHF 7.2 billion net outflows the year before.

Retail & Corporate – In 2010, pre-tax profit increased 9% to CHF 1,772 million compared with CHF 1,629 million in 2009, mainly due to a decrease in operating expenses. Total operating income in 2010 was CHF 3,870 million, down 1% from CHF 3,918 million a year earlier. Operating expenses declined 8% to CHF 2,098 million from CHF 2,289 million as a result of cost-cutting measures initiated in 2009.

Wealth Management Americas

Wealth Management Americas reported a pre-tax loss of CHF 130 million in 2010 compared with a pre-tax profit of CHF 32 million in 2009, due to higher litigation provisions. Operating income of CHF 5,564 million was essentially flat compared with CHF 5,550 million in 2009, but increased 4% in US dollar terms. In 2010, operating expenses increased 3% to CHF 5,694 million from CHF 5,518 million, and included CHF 162 million in restructuring charges compared with CHF 152 million in restructuring charges in 2009.

Net new money outflows for Wealth Management Americas were CHF 6.1 billion in 2010 compared with CHF 11.6 billion in the prior year. The Wealth Management US business saw net new money outflows of CHF 5.5 billion in 2010 compared with CHF 9.8 billion in 2009. We experienced net new money outflows during the first half of 2010, but reported net new money inflows in the second half of 2010 due to improved financial advisor retention and improved net new money inflows from financial advisors employed with UBS for more than one year.

Global Asset Management

Pre-tax profit for 2010 was CHF 516 million compared with CHF 438 million in 2009. Excluding a net goodwill impairment charge of CHF 191 million related to the sale of UBS Pactual in 2009, the pre-tax profit for 2010 would have decreased by CHF 113 million compared with 2009. Total operating income was CHF 2,058 million in 2010, compared with CHF 2,137 million in 2009. Total operating expenses were CHF 1,542 million in 2010, compared with CHF 1,698 million in 2009.

Net new money inflows were CHF 1.8 billion in 2010 compared with net outflows of CHF 45.8 billion in 2009. Net inflows from third parties were CHF 18.2 billion in 2010 compared with net outflows of CHF 5.1 billion in 2009. Net outflows from clients of our wealth management businesses were CHF 16.4 billion in 2010 compared with net outflows of CHF 40.7 billion in 2009.

Investment Bank

In 2010, we recorded a pre-tax profit of CHF 2,197 million compared with a pre-tax loss of CHF 6,081 million in 2009, primarily as a result of increased revenues in fixed income, currency and commodities, a significant reduction in net credit loss expenses and lower own credit losses. Total operating income in 2010 was CHF 12,010 million compared with CHF 3,135 million in the prior year. Net credit loss expense in 2010 was nil compared with net credit loss expense of CHF 1,698 million in 2009. Total operating expenses were CHF 9,813 million in 2009, compared with CHF 9,216 million in 2009.

Investment banking revenues were CHF 2,414 million in 2010, marginally down from CHF 2,466 million in the previous year. Revenues in equities were CHF 4,469 million, down 9% from CHF 4,937 million in 2009. Revenues in the fixed income, currencies and commodities business were positive CHF 5,675 million in 2010 compared with negative CHF 547 million in 2009, when the business was materially affected by losses on residual risk positions.

Corporate Center

The Corporate Center allocates operating expenses to the business divisions according to service consumption. In 2010, the Corporate Center had a cost base excluding variable compensation of just below CHF 7.5 billion. The Corporate Center has improved Group-wide cost management, and has implemented simple service delivery models with clear responsibilities. At the end of 2010, across all shared services functions, the Corporate Center had approximately 19,400 employees.

Wealth Management

Business description

With a presence in over 40 countries and headquartered in Switzerland, Wealth Management provides clients with financial advice, products and tools to fit their individual needs.

Business

Wealth Management delivers comprehensive financial services to wealthy private clients around the world – except those served by Wealth Management Americas. Our clients benefit from the entire spectrum of UBS resources, ranging from asset management to estate planning and corporate finance advice, in addition to the specific wealth management products and services outlined below. An open product platform provides clients with access to a wide array of products from third-party providers that complement our product lines.

With CHF 768 billion of invested assets at the end of 2010, we are one of the largest wealth managers in the world.

Strategy and clients

Our goal is to be the bank of choice for wealthy individuals worldwide. We offer sophisticated products and services to private clients, focusing in particular on the ultra high net worth and high net worth client segments. In addition, we also provide wealth management solutions, products and services to financial intermediaries.

We believe we are well positioned to capture growth opportunities in all markets, particularly in Asia, emerging markets and the global ultra high net worth segment, all areas where we expect to see the fastest market growth. Due to our strong local presence in leading global financial centers, we are in an excellent position to respond to increasing client demand for providing services in more than one jurisdiction (multi-shoring). Given our position as one of the largest banks for ultra high net worth and high net worth clients, we aim to grow faster than the average global wealth market, while increasing our profitability through enhanced gross margins and targeted investments.

We continue to build on our integrated client service model to identify investment opportunities that are tailored to individual client needs, and we intend to continue growing our client advisor base as we target 4,700 advisors in the medium term, especially in growth regions. In an increasingly complex regulatory environment, we will pursue the highest levels of compliance through extensive employee training and investment in risk management processes and standards.

In our cross-border business, we are concentrating on areas with the greatest market potential. In Asia Pacific, we continue to focus on Hong Kong and Singapore, the leading financial centers in the region. In emerging markets, we are focusing on the Middle East, Latin America and Central and Eastern Europe. To capture the full opportunity these markets present, we have organized emerging markets as a dedicated business and enhanced our local presence with several new Wealth Management offices. In Europe, we continue to support our cross-border business by focusing on the quality of our client service delivery and country-specific product offerings.

In our onshore business, we continue to enhance our already strong domestic presence in the key European and Asian markets. In Switzerland we are strengthening our position by consistently implementing our structured advisory process. We understand the distinct needs of our clients and aim to deliver superior service.

Total: CHF 768 billion
We have made substantial progress towards managing our non-Swiss European locations for profitability. In the Asia Pacific region, we will further invest in our well-established presences in Hong Kong, Singapore, Taiwan, Australia and Japan. In addition, we are focusing on long-term growth opportunities in locations such as China, where we are making use of UBS’s distinct market presence, which includes a stake in the fully licensed brokerage house, UBS Securities Co. Limited.

Our overall long-term industry outlook for growth within the global wealth market is positive. From a regional perspective, Asia, Latin America, Central and Eastern Europe and the Middle East are expected to grow the fastest, based on economic development and entrepreneurial wealth creation, depending however on political stability. In the established European markets, we expect the onshore business to grow faster than the cross-border business. Finally, the ultra high net worth market segment shows the potential for the strongest growth rate of all client segments.

Organizational structure

Wealth Management is headquartered in Switzerland with a presence in 44 countries and approximately 200 wealth management and representative offices, half of which are outside Switzerland, mostly in Europe, Asia Pacific, Latin America and the Middle East. As of the end of 2010, Wealth Management employed more than 15,500 personnel worldwide, including approximately 4,200 client advisors. The Wealth Management business unit is governed by an executive committee, and is primarily organized along regional lines with the business areas Asia Pacific, Europe, Global Emerging Markets, Global Established Markets, Switzerland and Global Ultra High Net Worth Clients – supported by a global Investment Products and Services unit and central functions.

Competitors

Our major global competitors include Credit Suisse, Julius Baer, HSBC, BNP/Foris, Barclays and Citigroup. In domestic markets, we compete primarily with the private banking operations of large local banks such as Coutts in the UK, Deutsche Bank in Germany and Unicredit in Italy.

Products and services

As a global integrated firm, UBS has the necessary expertise to identify appropriate investment opportunities for clients and the local presence to provide them. We have brought together experts from our Investment Bank, Global Asset Management and Wealth Management & Swiss Bank business divisions to create a new unit called Investment Products and Services (IPS), with approximately 2,150 employees at the end of 2010. IPS provides access to UBS’s services and expertise for clients and client advisors through an integrated and efficient organization. In addition, IPS develops investment products and services, based on the capabilities of the entire firm, to satisfy our clients’ needs. Wealth Management thus leverages the knowledge and product and service offerings from Global Asset Management and the Investment Bank to provide expert financial advice that supports clients throughout the different stages of their lives. By aggregating private investment flows into institutional-size flows, we are in a position to offer our Wealth Management clients access to investments that would otherwise only be available to institutional clients. Expertise is sourced either from within UBS or from approved third-party providers.

The recent financial crisis fundamentally altered financial market dynamics and client expectations. As a result, clients are demanding a more active relationship with their client advisor, and investment performance has significantly gained importance. To accommodate the needs of our clients, we are able to offer services across a full...
investment spectrum from execution only to discretionary mandates. Clients who opt for a discretionary mandate delegate the management of their assets to a team of professional portfolio managers. Clients who prefer to be actively involved in the management of their assets can choose an advisory mandate, in which investment professionals provide analysis and monitoring of portfolios, together with tailor-made proposals to support investment decisions. Our clients can trade the full range of financial instruments from single securities, such as equities and bonds, to various investment funds, structured products and alternative investments. Additionally, we offer structured lending, corporate finance and wealth planning advice on client needs such as funding for education, gift giving, inheritance and succession. For our ultra high net worth clients, we are able to offer institutional-like servicing with special access to our Investment Bank and Global Asset Management offerings.

Our integrated client service model allows client advisors to analyze their client’s financial situation, and develop and implement systematic tailored investment strategies. These strategies are regularly reviewed and based on individual client profiles, which comprise all important investment criteria such as the client’s life cycle needs, risk appetite and performance expectations. To ensure that the best solutions are presented to our clients, we continuously train our client advisors and provide them with ongoing support.

With the objective to further optimize our clients’ financial returns the new function of a Chief Investment Officer (CIO) has been established as of 1 March 2011. The CIO reports directly to the Wealth Management CEO and is mandated to oversee our global investment strategy and policy in close collaboration with IPS as well as Global Asset Management and the Investment Bank. The CIO function will be responsible for defining and proposing appropriate investment allocations and strategies and for communicating them across the global Wealth Management organization, especially to our client advisors and product managers.

2010

Results

In 2010, pre-tax profit increased 1% to CHF 2,308 million from CHF 2,280 million in 2009, mainly due to a 3% decrease in operating expenses. Operating income was down 2% as the result was negatively affected by low market interest rates and the strengthening of the Swiss franc against major currencies.

Operating income
Total operating income in 2010 was CHF 7,356 million, down 2% from CHF 7,471 million a year earlier. Recurring income decreased 5% on lower asset-based fees, reflecting a 4% lower average asset base. Interest income was down due to pressure from the low interest rate environment and the decrease in value of the euro and US dollar against the Swiss franc in 2010. This was partly offset by a shift of treasury-related revenues from Retail & Corporate to Wealth Management from second quarter 2010 onwards, impacting interest and trading income.

Non-recurring income increased 12% to CHF 1,934 million from CHF 1,731 million as trading income increased and as 2009 included higher revaluation adjustments on a property fund. Credit loss recoveries were CHF 11 million in 2010, down from CHF 45 million in 2009.

Operating expenses
Operating expenses declined 3% to CHF 5,049 million from CHF 5,191 million. Personnel expenses decreased 6% reflecting a reduction of average personnel levels by 9% and restructuring expenses of CHF 190 million in 2009. General and administrative expenses, at CHF 1,264 million, were up CHF 82 million from CHF 1,182 million a year earlier, mainly due to a CHF 40 million charge to reimburse the Swiss government for costs incurred in connection with the US cross-border matter, increased litigation provisions, and higher sponsoring and branding costs related to the global re-launch of the UBS brand. Charges for services from other business divisions, at CHF 449 million in 2010, were slightly up from CHF 428 million in the previous year. Depreciation was CHF 163 million in 2010, compared with CHF 154 million a year earlier. Amortization of intangible assets was CHF 19 million, down from CHF 67 million in 2009, mainly reflecting the impairment of intangible assets related to invested asset outflows in UBS (Bahamas) Ltd. in 2009.

➔ Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information on allocation of additional Corporate Center costs to the business divisions in 2010

Development of invested assets

Net new money
During 2010, all regions and client segments saw an improvement of their net new money situation and net outflows declined to CHF 12.1 billion compared with CHF 87.1 billion in 2009. International wealth management net new money outflows declined significantly to CHF 12.9 billion from CHF 79.9 billion. While Europe saw ongoing net outflows, partially due to discussions regarding tax treaties, net inflows were recorded in the Asia Pacific region as well as globally from ultra high net worth clients. Swiss wealth management reported net inflows of CHF 0.8 billion in 2010 compared with CHF 7.2 billion net outflows the year before. Net new money for 2010 includes inflows of CHF 3.7 billion resulting from transfers of Investment Bank clients to Wealth Management, as part of the Global Family Office initiative.

Invested assets
Invested assets were CHF 768 billion on 31 December 2010, a decrease of CHF 57 billion from 31 December 2009, as positive equity market performance was more than offset by adverse currency effects with a 16% decline in value of the euro and an 11% decline in value of the US dollar against the Swiss franc, and net new money outflows in 2010. In Wealth Management, 31% of invested assets were denominated in euros and 31% in US dollars at the end of 2010.

Gross margin on invested assets
The gross margin on invested assets increased 1 basis point to 92 basis points. The computation of the gross margin excludes the negative valuation adjustments on a property fund. The recurring income margin was down 1 basis point to 68 basis points, due to lower interest income reflecting ongoing pressure from the low interest rate environment. The non-recurring income margin was up 2 basis points to 24 basis points, mainly due to higher brokerage fees following higher client activity.
2009

Results
In 2009, pre-tax profit fell 37% to CHF 2,280 million, compared with CHF 3,631 million in 2008. The decline in profit was due to a 26% reduction in operating income, which was only partially compensated by a 20% cut in operating expenses resulting from cost-cutting measures. A provision of CHF 917 million in relation to the US cross-border case was included in the results for 2008.

Operating income
Total operating income in 2009 was CHF 7,471 million, down 26% from CHF 10,114 million a year earlier. Recurring income decreased 29% on lower asset-based fees, reflecting a 22% lower average asset base. Interest income was down due to pressure from the low interest rate environment.

Non-recurring income fell 29% due to lower brokerage fees, reflecting reduced client activity. Income was also impacted by higher internal funding-related interest charges and revaluation adjustments of CHF 155 million on a property fund. Credit loss expenses improved significantly to net recoveries of CHF 45 million from CHF 388 million net credit losses in 2008, which included provisions made for lombard loans.

Operating expenses
In 2009, operating expenses declined 20% to CHF 5,191 from CHF 6,483 million a year earlier, as a result of cost-cutting measures. Excluding the restructuring charges of CHF 254 million booked in 2009, and the abovementioned provision in 2008 relating to the US cross-border case, operating expenses declined 11%. Personnel expenses decreased 10% excluding restructuring charges, due to a 14% reduction of overall personnel, which mostly took place towards the end of 2009. General and administrative expenses, at CHF 1,182 million, were down significantly from CHF 2,357 million a year earlier, mainly due to the abovementioned 2008 provision related to the US cross-border case. Charges for services from other business divisions, at CHF 428 million in 2009, were slightly up from CHF 409 million in the previous year. Depreciation was CHF 154 million in 2009, compared with CHF 181 million a year earlier. Amortization of intangible assets was CHF 67 million, up from CHF 33 million in 2008, mainly reflecting the impairment of intangible assets related to invested asset outflows in UBS (Bahamas) Ltd.

Development of invested assets
Net new money
Net new money outflows in 2009 were CHF 87.1 billion compared with CHF 96.0 billion in the previous year. Aside from the effects of the financial market turbulence, these outflows mainly reflected reputational issues, client advisor attrition and proposed tax treaties. Outflows from Swiss wealth management declined significantly in 2009 to CHF 7.2 billion from CHF 23.0 billion in 2008. Outflows from international clients were CHF 79.9 billion compared with CHF 73.0 billion in 2008.

Invested assets
Invested assets were CHF 825 billion on 31 December 2009, a decrease of CHF 8 billion from 31 December 2008, as positive market performance was more than offset by net new money outflows, and a 3% decrease of the US dollar against the Swiss franc in the course of 2009. In Wealth Management, 36% of invested assets were denominated in euros and 31% in US dollars at the end of 2009.

Gross margin on invested assets
The gross margin on invested assets declined 8 basis points to 91 basis points. The computation of the gross margin excludes negative valuation adjustments on a property fund. The recurring income margin was down 7 basis points to 69 basis points, as deposit margins and volumes as well as lombard loan volume decreased. The non-recurring income margin was also down, decreasing 1 basis point to 22 basis points, mainly due to lower brokerage fees reflecting decreased client transaction activity levels.
Retail & Corporate
Business description

Through our network of 300 branches in Switzerland, we deliver comprehensive financial services to retail, corporate and institutional clients.

Business

Retail & Corporate delivers comprehensive financial services to retail, corporate and institutional clients in Switzerland. With CHF 879 billion in client assets at the end of 2010, we are the leading bank in Switzerland for retail, corporate and institutional clients. We are market leaders in the retail and corporate loan market in Switzerland, with a highly collateralized loan book of CHF 135 billion on 31 December 2010 as shown in the “Loan portfolio, gross” chart.

The Retail & Corporate business is closely embedded within the integrated bank delivery model of UBS Switzerland, covering also Wealth Management, Asset Management and Investment Banking in Switzerland.

➔ Refer to the “Strategy and structure” section of this report for more information on UBS Switzerland

Strategy and clients

Our goal is to be the bank of choice for retail clients in Switzerland by delivering value-added services. We serve one out of three households in Switzerland with over 300 branches, 1,250 automated teller machines and self-service terminals, e-banking services and customer service centers. We are continuously refining our suite of life-cycle based offerings, which offer our clients dedicated products and services to fulfill their evolving requirements. We will continue to invest in our physical and electronic channels in order to improve the client experience – we use technology to complement, rather than replace, the traditional physical branch network. We are refurbishing our branches by introducing new concepts to welcome and serve customers as well as to reflect our new brand identity.

In Switzerland, our corporate and institutional clients (CIC) are comprised of multinationals, corporations, institutional clients and financial institutions, as well as small and medium enterprises (SME). We strive to be their preferred partner for all of their complex needs and contribute to their long-term success. As a leading CIC business, we serve almost one of two Swiss companies, more than 85% of the 1000 largest corporates as well as one out of every three pension funds in Switzerland, including 75 of the largest 100. Combining the integrated bank approach with our local market expertise across all Swiss regions, we are able to serve our clients best by offering the expertise of the entire bank while generating opportunities to cross-sell and increase referrals.

Organizational structure

Retail & Corporate is a core element of UBS Switzerland’s integrated bank delivery model which allows us to extend the expertise of the entire bank to our Swiss retail, corporate and institutional clients.

To ensure consistent delivery throughout Switzerland, we have aligned the regional organization structures of our different business segments. In July 2010, the Swiss network was organized into ten geographical regions. Each region is aligned across the different business segments, and is led by management teams who are also responsible for delivering the integrated bank locally.

Competitors

In the Swiss retail banking business, our competitors are Credit Suisse, Raiffeisen, the cantonal banks, PostFinance, as well as other regional and local Swiss banks.

In the Swiss corporate and institutional business, our main competitors are Credit Suisse, the cantonal banks, and foreign banks in Switzerland.

Products and services

Our retail clients have access to services such as a comprehensive selection of cash accounts, payments, savings and retirement products, investment fund solutions, residential mortgages, life insurance and advisory services. These services can be tailored to clients’ individual life-cycle solutions in combination with financial advice. We offer our Swiss corporate and institutional clients a comprehensive set of products and services. In Switzerland, we are a leading provider of financing solutions, as we offer access to capital markets (equity and debt capital), syndicated and structured credit, private placements, trade finance, factoring, leasing and traditional financing solutions. By providing access to global sector specialists within the Investment Bank, we can provide strategic advice in the field of mergers and acquisitions. Additionally, we advise company owners on succession planning, and provide professional support in liquidity and cash management. Finally, we offer global custody services for institutional clients who want to consolidate multiple-agent bank custodies into a single, cost-efficient global custodial relationship.

2010

Results

In 2010, pre-tax profit increased 9% to CHF 1,772 million compared with CHF 1,629 million in 2009, mainly due to an 8% decrease in operating expenses. Operating income was slightly lower compared with the previous year as reduced interest income was only partly offset by lower credit loss expenses.

Operating income

Total operating income in 2010 was CHF 3,870 million, down 1% from CHF 3,918 million a year earlier. Interest income was down 10%, mainly as low market interest rates continued to exert downward pressure on interest margins. In addition, interest income decreased as approximately 30% of treasury related revenues were allocated from Retail & Corporate to Wealth Management from second quarter 2010 onwards. These effects were only partially compensated by higher volumes in certain products and improved margins on new mortgage loans.

Non-interest income went up 8% as higher client activity increased brokerage fees and commission income as well as brokerage-related foreign exchange trading income. Net credit loss expenses were CHF 76 million in 2010, a decline from CHF 102 million compared with 2009.

Operating expenses

Operating expenses declined 8% to CHF 2,098 million from CHF 2,289 million, a result of cost-cutting measures initiated in 2009. Personnel expenses decreased 11%, reflecting a 4% reduction in average personnel levels and related restructuring expenses in 2009. General and administrative expenses were stable at CHF 836 million. Net charges to other business divisions, at CHF 509 million in 2010, were down 2% from CHF 518 million the previous year, largely due to business realignments between Wealth Management and Retail & Corporate. Depreciation was CHF 146 million in 2010 compared with CHF 136 million in 2009.

➔ Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information on allocation of additional Corporate Center costs to the business divisions in 2010.

Development of invested assets

Invested assets were CHF 136 billion on 31 December 2010, an increase of CHF 1 billion from 31 December 2009, reflecting higher equity markets and net new money inflows, partly offset by adverse currency effects.

2009

Results

In 2009, pre-tax profit fell 32% to CHF 1,629 million compared with CHF 2,382 million in 2008. The decline in profit was due to a 17% decline in revenues and higher credit loss expenses. This was only partly compensated by a 9% reduction in operating expenses from cost-cutting measures.

Operating income

Total operating income in 2009 was CHF 3,918 million, down 20% from CHF 4,907 million a year earlier. Interest income decreased 16% as low market interest rates exerted downward pressure on deposit interest margins.

Non-interest income fell 17%, partly as a result of lower client activity affecting brokerage fees and commission income as well as brokerage related foreign exchange trading income. Net credit loss expenses increased to CHF 178 million from CHF 4 million in the previous year, mainly reflecting credit losses with a small number of corporate clients.

Operating expenses

At CHF 2,289 million, operating expenses in 2009 declined 9% from CHF 2,524 million one year earlier as a result of cost-cutting measures. Personnel expenses decreased 5%, reflecting a 7% reduction in average personnel levels, which mostly took place towards the end of the year. General and administrative expenses, at CHF 835 million, were down 11% from CHF 938 million one year earlier due to cost-cutting measures. Net charges to other business divisions, at CHF 518 million in 2009, were up 7% from CHF 482 million the previous year. Depreciation was CHF 136 million in 2009, down CHF 6 million from CHF 142 million a year earlier.

Development of invested assets

Invested assets were CHF 135 billion on 31 December 2009, an increase of CHF 13 billion from 31 December 2008, reflecting higher equity markets.
Wealth Management Americas

Business description

Wealth Management Americas provides advice-based relationships through its financial advisors, who deliver a fully-integrated set of wealth management solutions designed to address the needs of high net worth and ultra high net worth individuals and families.

Business

Wealth Management Americas is among the leading wealth managers in the Americas based on invested assets, and includes the Wealth Management US business, the domestic Canadian business and the international business booked in the United States. On 31 December 2010, the business division had CHF 689 billion in invested assets.

Strategy and clients

Our vision is to be the best wealth management business in the Americas. In order to achieve this goal, we must be both client-focused and advisor-centric. Due to our competitive positioning, we believe we are large enough to be relevant and small enough to be nimble, enabling us to combine the advantages of both large and boutique players. By partnering with financial advisors serving high net worth and ultra high net worth clients, our goal is to become a trusted, differentiated and superior provider of financial solutions.

We deliver a fully-integrated set of advice-based wealth management solutions through our financial advisors to meet the needs of our target client segments: high net worth clients (USD 1 million to USD 10 million in investable assets) and ultra high net worth clients (more than USD 10 million in investable assets), while also serving the needs of the core-affluent (USD 250,000 to USD 1 million in investable assets) where appropriate. We are committed to providing advice to our clients by employing the best professionals in the industry, delivering the highest standard of execution and running a streamlined and efficient business.

Geographical presence in key markets
Organizational structure

Wealth Management Americas consists of branch networks in the US, Puerto Rico and Canada, with 6,796 financial advisors as of 31 December 2010. Most corporate and operational functions of the business division are located in the home office in Weehawken, New Jersey.

In the US and Puerto Rico, Wealth Management Americas operates through direct and indirect subsidiaries of UBS AG. Securities and operations activities are conducted primarily through two registered broker-dealers, UBS Financial Services Inc. and UBS Financial Services Incorporated of Puerto Rico. Our banking services in the US include those conducted through the UBS AG branches and UBS Bank USA, a federally-regulated Utah bank, which provides Federal Deposit Insurance Corporation (FDIC)-insured deposit accounts, enhanced collateralized lending services and mortgages.

The business division’s Canadian wealth management and banking operations are conducted through UBS Bank (Canada).

Significant recent acquisitions and business transfers include:

– March 2009: agreement to sell 56 branches to Stifel, Nicolaus & Company, Incorporated. The sale was completed in four separate closings in the second half of 2009.
– September 2009: completed the sale of UBS’s Brazilian financial services business, UBS Pactual, to BTG Investments, LP.
– October 2010: transfer of investment management responsibility for the US hedge funds business from Wealth Management Americas to Global Asset Management’s alternative and quantitative investments business. This formed part of a new joint venture between the two business divisions, which aims to deliver attractive hedge fund and fund of hedge funds solutions to Wealth Management Americas’ clients.

Competitors

Wealth Management Americas competes with national full-service brokerage firms, domestic and global private banks, regional broker-dealers, independent broker-dealers, registered investment advisors, trust companies and other financial services firms offering wealth management services to US and Canadian private clients, as well as foreign non-resident clients seeking wealth management services within the US. Our main competitors include the wealth management businesses of Bank of America, Morgan Stanley, and Wells Fargo.

Products and services

Wealth Management Americas offers clients a full array of solutions that focus on the individual financial needs of each client. Comprehensive planning supports clients through the various stages of their lives, including education funding, charitable giving, tax management strategies, estate strategies, insurance, retirement, and trusts and foundations with corresponding product offerings for each stage. Our advisors work closely with internal consultants in areas such as wealth planning, portfolio strategy, retirement and annuities, alternative investments, managed accounts, structured products, banking and lending, equities, and fixed income. Clients also benefit from our dedicated Wealth Management Research team, which provides research guidance to help support the clients’ investment decisions.

Our offerings are designed to meet a wide variety of investment objectives, including wealth accumulation and preservation, income generation and portfolio diversification. To address the full range of our clients’ investment needs, we also offer competitive lending and cash management services such as the Re-

source Management Account (RMA), FDIC-insured deposits, securities-backed lending, mortgages and credit cards.

Additionally, Corporate Employee Financial Services provides comprehensive, personalized stock benefit plan and related services to many of the largest US corporations and their executives. For corporate and institutional clients, we offer a robust suite of solutions, including equity compensation, administration, investment consulting, defined benefit and contribution programs and cash management services.

Our clients can choose the type of relationship they prefer to have with us via asset-based pricing, transaction-based pricing or a combination of both. Asset-based accounts have access to both discretionary and non-discretionary investment advisory programs. Non-discretionary advisory programs enable the client to maintain control over all account transactions, while clients with discretionary advisory programs direct investment professionals to manage a portfolio on their behalf. Depending on the type of discretionary program, the client can give investment discretion to a qualified financial advisor, a team of our investment professionals or a third-party investment manager. Separately, mutual fund advisory programs are also offered, whereby a financial advisor works with the client to create a diversified portfolio of mutual funds guided by a research-driven asset allocation framework.

For clients who favor individual securities, we offer a broad range of equity and fixed income instruments. In addition, qualified clients may take advantage of structured products and alternative investment offerings to complement their portfolio strategies.

All of these solutions are supported by a dedicated markets execution group. This group partners with the Investment Bank and Global Asset Management in order to access the resources of the entire firm as well as third-party investment banks and asset management firms.

¹ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure, assets and other variables.  
² Compensation commitments and advances related to recruited financial advisors (FAs) represents costs related to compensation commitments and advances granted to financial advisors at the time of recruitment, which are subject to vesting requirements.  
³ For the definitions of our key performance indicators, refer to the "Measurement and analysis of performance" section of this report.  
⁴ Not meaningful if either the current period or the comparison period is a loss period.  
⁵ Excludes interest and dividend income.  
⁶ Refer to the "Capital management" section of this report for more information about the equity attribution framework.  
⁷ For purposes of comparison with US peers.  
⁸ Acquisition costs represent goodwill and intangible assets funding costs and intangible asset amortization costs related to UBS's 2000 acquisition of the PaineWebber retail brokerage business.
2010

Results

Wealth Management Americas reported a pre-tax loss of CHF 130 million in 2010 compared with a pre-tax profit of CHF 32 million in 2009. In 2010, Wealth Management Americas incurred restructuring charges of CHF 162 million, while 2009 included restructuring charges of CHF 152 million and net goodwill impairment charges of CHF 19 million related to the sale of UBS Pactual. Excluding these items, pre-tax performance would have declined to a profit of CHF 32 million in 2010 from CHF 203 million in 2009, primarily resulting from a significant increase in litigation provisions in 2010 to CHF 320 million from CHF 54 million in 2009.

Operating income

Operating income of CHF 5,564 million was essentially flat compared with CHF 5,550 million in 2009, but increased 4% in US dollar terms. Recurring income increased 7% to CHF 3,472 million due to higher revenues from managed accounts and mutual funds related to higher average invested assets. Recurring income increased to 62% of operating income from 59% in 2009. Non-recurring income decreased 9% to CHF 2,093 million due to lower municipal trading income, partly offset by higher commission income and a demutualization gain from Wealth Management Americas’ stake in the Chicago Board Options Exchange.

Operating expenses

Operating expenses increased 3% to CHF 5,694 million from CHF 5,518 million. In 2010, operating expenses included CHF 162 million in restructuring charges compared with CHF 152 million in 2009. Additionally, 2009 included CHF 34 million in goodwill impairment charges related to the sale of UBS Pactual (of which CHF 15 million was charged to the Corporate Center, as this was related to foreign exchange exposures managed by Group Treasury).

Personnel expenses were CHF 4,225 million in 2010, down slightly from CHF 4,231 million in the previous year. In US dollar terms, personnel expenses increased 4%. Excluding CHF 35 million in restructuring charges in 2010 and CHF 71 million in restructuring charges in 2009, personnel expenses would have increased 1% from the previous year. This increase was due primarily to higher financial advisor compensation related to higher revenue production and the introduction of the GrowthPlus incentive compensation program in 2010, partly offset by lower salaries and other personnel costs, resulting from restructuring initiatives in 2010 and 2009. Expenses for compensation commitments and advances related to recruited financial advisors were flat from 2009, but increased 4% in US dollar terms. Compensation advance balances were CHF 3,112 million as of 31 December 2010, down 4% from 31 December 2009, but increased 7% in US dollar terms.

Non-personnel expenses increased 14% to CHF 1,470 million from CHF 1,287 million in 2009, principally due to higher litigation provisions, which increased to CHF 320 million in 2010 from CHF 54 million in 2009. Non-personnel expenses included CHF 127 million in restructuring charges in 2010 related to real estate writedowns, while 2009 included restructuring charges of CHF 82 million and the abovementioned goodwill impairment charges. In addition, non-personnel costs included a shift of expenses from the Corporate Center to the business divisions in 2010.

Development of invested assets

Net new money

Net new money outflows for Wealth Management Americas were CHF 6.1 billion in 2010 compared with CHF 11.6 billion in the prior year.

The Wealth Management US business saw net new money outflows of CHF 5.5 billion in 2010 compared with CHF 9.8 billion in 2009. We experienced net new money outflows during the first half of 2010, mainly due to financial advisor attrition and limited recruiting of experienced financial advisors. Net new money turned positive in the second half of 2010 due to improved financial advisor retention and improved net new money inflows from financial advisors employed with UBS for more than one year. Including interest and dividend income, net new money inflows for the Wealth Management US business improved to CHF 13.1 billion from CHF 10.0 billion in 2009. Including interest and dividend income only from Wealth Management US, Wealth Management Americas had net new money inflows of CHF 12.5 billion in 2010, compared with CHF 8.2 billion in 2009.

In 2010, Wealth Management Americas recorded CHF 2.2 billion of net new money inflows related to the inclusion of invested assets of certain retirement plan assets not custodied at UBS, as discussed below in the “Invested assets” section.
Invested assets

Invested assets were CHF 689 billion on 31 December 2010, essentially flat from CHF 690 billion on 31 December 2009. In US dollar terms, invested assets increased 12% primarily due to positive market performance in the second half of 2010. During the course of the year, Wealth Management Americas conducted a review of its invested assets reporting and determined that, going forward, certain retirement plan assets custodied away from UBS should be included in invested assets. As a result, invested assets increased by CHF 22 billion at year end and net new money inflows increased by CHF 2.2 billion.

Gross margin on invested assets

The gross margin on invested assets was 80 basis points in 2010, down from 81 basis points in 2009, the result of a slight increase in income compared with a 2% increase in average invested assets. The recurring income margin increased 2 basis points to 50 basis points due to higher fees from managed accounts and mutual funds. The non-recurring margin decreased 3 basis points to 30 basis points due to a decrease in municipal trading income.
2009

Results

Wealth Management Americas reported a pre-tax profit of CHF 32 million in 2009 compared with a pre-tax loss of CHF 823 million in 2008. The 2009 results included restructuring charges of CHF 152 million and a net goodwill impairment charge of CHF 19 million related to the sale of UBS Pactual. Our performance in 2008 included CHF 1,636 million in charges and trading losses related to auction rate securities (ARS). Excluding these items, pretax performance would have been a profit of CHF 203 million in 2009 compared with a profit of CHF 813 million in 2008.

Operating income

In 2009, operating income decreased 11% to CHF 5,550 million from CHF 6,249 million in 2008. Excluding ARS-related trading losses of CHF 172 million in 2008, operating income would have declined 14%. Recurring income decreased 20% to CHF 3,256 million, due to lower managed account fees related to an 11% decrease in average invested assets, while interest income declined resulting from lower interest spreads. Recurring income declined to 59% of operating income from 65% in 2008. Non-recurring income increased 4% due to a CHF 35 million interest credit from the Investment Bank, resulting from a change in the UBS Bank USA investment portfolio strategy and higher municipal trading income, partly offset by lower commission revenue related to reduced transactional activity. In addition, 2008 included the abovementioned trading losses related to ARS.

Operating expenses

Operating expenses decreased 22% to CHF 5,518 million from CHF 7,072 million in 2009. In 2009, operating expenses included CHF 152 million in restructuring charges and CHF 34 million in goodwill impairment charges related to the sale of UBS Pactual (of which CHF 15 million was charged to the Corporate Center, as this was related to foreign exchange exposures managed by Group Treasury), while 2008 expenses included CHF 1,464 million in charges related to the ARS settlement. Excluding these charges, operating expenses would have decreased 5%. Personnel expenses were CHF 4,231 million in 2009, down 1% from CHF 4,271 million in the previous year. Excluding CHF 71 million in restructuring charges in 2009, personnel expenses would have decreased 3% from the previous year. This was a result of reduced salaries related to a decrease in headcount and lower financial advisor compensation related to lower revenue. This decrease was partly offset by an increase in costs for compensation commitments and advances related to recruited financial advisors, as a result of increased financial advisor recruiting in the second half of 2008 through the first quarter of 2009. Accordingly, compensation advance balances related to recruited financial advisors increased 61% to CHF 3,253 million at 31 December 2009 from 31 December 2008. Non-personnel expenses declined 54% to CHF 1,287 million from CHF 2,801 million in 2008, but would have decreased 11% excluding CHF 82 million in restructuring costs that were mainly related to real estate writedowns, the abovementioned goodwill impairment charges and ARS-related charges in 2008. The decline was also due to cost-cutting measures in general, including reduced general and administrative expenses.

Development of invested assets

Net new money

In 2009, net new money outflows for Wealth Management Americas were CHF 11.6 billion compared with CHF 15.9 billion in the prior year. The Wealth Management US business’ net new money outflows were CHF 9.8 billion in 2009, compared with CHF 11.4 billion in 2008. Following strong net new money inflows in first quarter 2009 due to recruitment of experienced financial advisors, Wealth Management US experienced net new money outflows during the remainder of the year due to financial advisor attrition and limited recruiting of experienced financial advisors as a result of reputational issues. Including interest and dividends, net new money inflows for the Wealth Management US business in 2009 were CHF 10.0 billion, compared with CHF 11.9 billion in 2008. Including interest and dividend income only from Wealth Management US, Wealth Management Americas had net new money inflows of CHF 8.2 billion in 2009, compared with CHF 7.4 billion in 2008.

Invested assets

Invested assets were CHF 690 billion on 31 December 2009, up 7% from CHF 644 billion on 31 December 2008. This increase was principally due to positive market performance, and was partly offset by a reduction of CHF 24 billion related to the sale of branches to Stifel, Nicolaus & Company, Incorporated and the sale of UBS Pactual, as well as net new money outflows. Additionally, invested assets were impacted by negative currency translat effect due to a 3% depreciation of the US dollar versus the Swiss franc.

Gross margin on invested assets

The gross margin on invested assets was 81 basis points in 2009, down from 82 basis points in 2008. The decrease was a result of a 12% decline in income compared with an 11% decrease in average invested assets. The recurring income margin declined 5 basis points to 48 basis points, corresponding to a 20% decrease in recurring income. The non-recurring margin increased 4 basis points to 33 basis points, due to an increase in municipal trading income and a CHF 35 million interest credit from the Investment Bank (attributed to a change in the UBS Bank USA investment portfolio strategy), while 2008 included the abovementioned trading losses related to ARS.
Global Asset Management

Business description

Global Asset Management is a large-scale asset manager with businesses well-diversified across regions, capabilities and distribution channels. We offer investment capabilities and styles across all major traditional and alternative asset classes. These include equities, fixed income, currency, hedge fund, real estate and infrastructure investment capabilities which can be combined into multi-asset strategies. The fund services unit provides professional services including legal fund set-up, accounting and reporting for traditional investment funds and alternative funds.

Business

Global Asset Management offers a diverse range of investment capabilities and services from a boutique-like structure, encompassing all major asset classes, including equities, fixed income, currency, hedge funds, real estate and infrastructure as well as asset allocation, risk management and fund administration services. Invested assets totaled CHF 559 billion on 31 December 2010, making Global Asset Management one of the larger global asset managers. We are among the largest hedge fund of funds and real estate investment managers in the world, one of the largest mutual fund managers in Europe and the largest in Switzerland. The “Business structure” chart shows the investment, distribution and support structure of the business division.

Revenues and key performance indicators are reported according to Global Asset Management’s business lines: traditional investments (equities, fixed income and multi-asset (global investment solutions)), alternative and quantitative investments, global real estate, infrastructure and fund services. The bar charts on the following pages show the breakdown of invested assets across these segments, as well as by regions and channels.

Strategy

Global Asset Management is focused on delivering consistent long-term investment performance and capitalizing on the expected growth opportunities within the asset management industry. The industry outlook remains strong with three main drivers: the financial crisis has reduced the assets of both the retired and the working population, creating a pressing need for increased savings rates; emerging markets will continue to drive the growth of the mutual funds industry and retirement schemes in these markets; and as governments focus on reducing deficits, they will need to reduce support for benefits and pensions and will face increased pressure for privatizing infrastructure assets.

The diversification of our business places us in a good position to benefit from shifting market dynamics and provides a solid foundation for capturing these growth opportunities.

Our key strategic objective is to monetize our good long-term investment performance, both through gaining new client assets and improving our retention of existing client assets.

We are working to build on our strong third party institutional business, while launching intensified third party wholesale
initiatives in the Americas and in Europe. Through increased
collaboration with UBS’s wealth management businesses, we
expect to benefit from their return to growth. We continue to
capitalize on our established positions in emerging markets, no-
tably in China, South Korea and the Middle East and will build
our presence in Brazil following the completion of the acquisi-
tion of Link Investimentos.

Organizational structure

Our business division has main offices in London, Chicago, Hart-
ford, Hong Kong, New York, Paris, Singapore, Sydney, Tokyo and
Zurich, and employs around 3,500 personnel in 24 countries.
Global Asset Management operates through UBS AG, or through
its subsidiaries.

Significant recent acquisitions and business transfers
– In February 2008, UBS acquired 100% of the Caisse Centrale
de Réescompte (CCR) Group in France from Commerzbank.
The asset management business of CCR currently operates as
CCR Asset Management.
– In August 2008, UBS sold its 24.9% stake in Adams Street
Partners to its remaining shareholders.
– In September 2009, UBS completed the sale of its Brazilian
financial services business, UBS Pactual, including its asset
management business, UBS Pactual Asset Management.
– In December 2009, the real estate investment management
business of Wealth Management & Swiss Bank was transferred
to Global Asset Management.
– In April 2010, UBS announced that it had agreed to acquire
Link Investimentos, one of the largest independent broker-
dealers in Brazil.
– In October 2010, UBS increased its holding from 51.0% to
94.9% in UBS Real Estate Kapitalanlagegesellschaft mbH
(KAG), a Global Asset Management joint venture with Siemens
in Munich, Germany. We purchased our original stake in
– In October 2010, investment management responsibility for
the US hedge fund business was transferred from Wealth Man-
agement Americas to Global Asset Management’s alternative
and quantitative investments business. This formed part of a
new joint venture between the two business divisions, which
aims to deliver attractive hedge fund and fund of hedge funds
solutions to Wealth Management Americas’ clients.

¹ Assets represented are totals for the Global Asset Management business division worldwide.
The regional split is primarily based on the client servicing location.

Competitors

Our competitors include global firms with wide-ranging capabili-
ties, such as Fidelity Investments, AllianceBernstein Investments,
BlackRock, JP Morgan Asset Management, Deutsche Asset Man-
agement and Goldman Sachs Asset Management. Many of our
other competitors are regional or local specialist niche players
who focus mainly on one asset class, particularly in the real estate,
hedge fund or infrastructure investment areas.

The asset management industry is becoming increasingly po-
larized into either large-scale firms or niche specialists. Large-scale
firms, like Global Asset Management, offer well-diversified invest-
ment capabilities across all major asset classes and have a global
presence as well as a broad distribution network.

Products and services

The “Investment capabilities and services” chart illustrates our of-
fering, which can be delivered in the form of segregated, pooled
and advisory mandates, along with a range of more than 500
registered investment funds, exchange-traded funds and other
investment vehicles across all major asset classes.

- **Equities** offers a full spectrum of investment styles with varying risk and return objectives. It has three investment pillars with distinct strategies, including core/value (portfolios managed according to a price to intrinsic value philosophy), growth (portfolios of quality growing companies that we believe to be undervalued in the market) and structured equities (strategies that employ proprietary analytics and quantitative methods, including passive).

- **Fixed income** offers a diverse range of global, regional and local market-based investment strategies that cover a wide range of benchmarks. Its capabilities include “core” government and corporate bond strategies, complemented by extended strategies such as high-yield and emerging market debt.

- **Alternative and quantitative investments** has two primary business lines – multi-manager (or fund of funds) and single manager. The former constructs portfolios of hedge funds and other alternative investments operated by third-party managers, allowing clients to have diversified exposure to a range of hedge funds, private equity and infrastructure strategies. O’Connor is a key provider of single manager global hedge funds.

- **Global real estate** actively manages real estate investments in Asia, Europe and the US, as well as across the major real estate sectors. Its capabilities are focused on core and value-added strategies but also include other strategies across the risk/return spectrum. It offers direct investment, fund of funds and real estate securities strategies.

- **Global investment solutions** offers asset allocation, currency, manager research and risk management services. It manages a wide array of domestic, regional and global balanced portfolios, currency mandates, structured portfolios, multi-manager and absolute return strategies. Through its strategic investment advisory services, it supports clients in a wide range of investment-related functions, including investment policy setting, integrated asset liability solutions, multi-manager approaches, investment outsourcing and fiduciary management.

- **Infrastructure** originates and manages specialist strategies that invest directly in infrastructure assets globally.

- **Fund services**, the global fund administration business, provides professional services, including legal setup, reporting and accounting for retail and institutional investment funds, hedge funds and other alternative funds.
Clients

Global Asset Management has a client base located throughout the world. As of 31 December 2010, approximately 60% of invested assets originated from institutional clients (for example, corporate and public pension plans, governments and their central banks), with the remainder from wholesale clients (financial intermediaries, including UBS’s wealth management businesses, and third parties).

Distribution of our capabilities and services to both client segments relies upon our regional business structure, as detailed in the “Business structure” chart (Americas, Asia Pacific, Switzerland and Europe). Through regional distribution, we are able to leverage the full resources of our global investment platforms and functions to provide clients with relevant investment management products and services, client servicing and reporting at a local level. In October 2010, a Global Sovereign Markets group was established to deliver an integrated global approach to this client segment and ensure that sovereign institutions receive the dedicated advisory, investment and training solutions they require.

Investment performance 2010

Investment markets were volatile in 2010 yet two-thirds of our key actively-managed traditional strategies delivered strong results, further improving their long-term records. By contrast, some of our actively managed equity strategies faced the greatest headwinds as many equity markets, notably the US, became highly sentiment-driven. This created a difficult environment for our active managers focusing on fundamental analysis to seek to generate outperformance.

After performing well in 2009, core/value large cap equity strategies struggled to match their gains in 2010, a year when the best returning stocks were typically less responsive to company fundamentals than to broad economic factors. As a result, core/value large cap strategies such as US, pan-European, emerging markets, Asia (ex-Japan) and Australia underperformed their benchmarks and peers, although the margin of underperformance was much smaller than the margin of outperformance in 2009. Both UK value and Canadian large cap equity strategies also underperformed in 2010. Some large cap core/value strategies did extend their favorable performance into 2010, including global, global ex-US, high alpha emerging markets strategy and global and European concentrated alpha strategies. Swiss large cap equities performed positively as well. Small cap strategies in the core/value pillar tended to perform extremely well, especially European, US and Swiss small cap strategies. Still, on a three-year basis, well over half of key core/value strategies were ahead of their benchmarks – most of them by a notable margin.

The majority of growth equities strategies extended their solid 2009 performance by exceeding their benchmarks in 2010. Notable leaders versus peers were European and small cap (both US and ex-US) growth strategies. After a very strong 2009, US large cap select growth trailed modestly by comparison in 2010, but not nearly to the extent of its outperformance in 2009. Outperformance on a since-inception basis remains across the entire range of growth strategies with long-term (three-year plus) records.

In structured equities, strategies relying strongly on input from fundamental stock analysis, which performed extremely well in 2009, underperformed benchmarks in 2010. While US fundamental equity market neutral had a disappointing year, it remained ahead of peers on a since-inception basis. Conversely, strategies relying specifically on quantitatively-derived insights performed ahead of benchmarks in 2010, and many also outperformed on a three-year or since-inception basis. Passive/exchange traded funds (ETF) strategies met their objectives in 2010.
In global fixed income markets, yields generally fell over the year, leading to high total returns for most bond markets. Our fixed income strategies performed very well, and a large majority of key strategies outperformed their benchmark indices for the year and improved their longer-term records. This outperformance for the year was consistent across regions and strategies, and was evident in the traditional strategies (such as global sovereign), in local bond strategies (such as Australian, Canadian, Euro, Japanese, Swiss, UK and US), in higher alpha and newer strategies (such as emerging markets and Asian bonds) and in absolute return strategies (such as currency alpha and fixed income opportunities). Two thirds of our key strategies were also ahead of or in line with peers for the year. Money market funds continued to achieve their capital preservation objectives.

The performance of multi-asset strategies was positive in 2010, building on a strong 2009 and improving longer-term records. Benchmarked strategies finished the year in line with or above their reference indices overall, comparing favorably with peers’ performance. Dynamic alpha absolute return strategies turned positive towards the end of the year. Multi-asset strategies had been positioned for a recovery in risky assets such as equities, leading to a strong result in the final quarter following a period of more volatile markets. These strategies benefited from strong currency and asset allocation, while stock selection results were mixed overall. The stand-alone active currency strategy posted strong returns throughout the year. Similarly strong performance came from global and regional convertible bond strategies, which ended the year well ahead of benchmarks. The majority of multi-manager investment solutions also delivered positive returns relative to benchmark over the year. Strategic investment advisory services, including investment outsourcing, asset liability investment solutions and strategic alternatives advisory gained further traction and brought in new clients during the year.

In alternative and quantitative investments, hedge funds continued to produce attractive absolute and risk adjusted returns, building on the strong performance rebound seen in 2009. The O’Connor single manager funds posted positive returns across its core strategies, outperforming most peers on a risk adjusted basis. In the multi-manager business, positive returns were posted across virtually all strategies, with particularly strong performance versus peers from the funds managed by the alternative investment solutions team.

Performance of the direct real estate funds generally improved in 2010. The flagship UK strategy achieved strong absolute returns and markedly improved performance relative to benchmark. Returns of the European core flagship strategies remained positive. The Swiss composite (consisting of five UBS Swiss listed real estate funds) outperformed its benchmark. The US core fund delivered very strong absolute returns for 2010 and outperformed its benchmark for the year. The flagship J-REIT (managed in partnership with Mitsubishi Corporation) also produced positive absolute returns and outperformed versus benchmark by a wide margin. The performance of real estate securities strategies was mixed versus benchmarks. The fund of funds strategies continued to gather momentum, delivering positive returns for the year.

The flagship UBS International Infrastructure Fund made significant progress investing its capital during the year. In March 2010, the fund acquired the right to develop Collgar Wind Farm Pty Ltd, a greenfield renewable energy project in Australia. The project is under construction and was ahead of schedule at the end of the year. An additional transaction announced in April 2010 – Njord Gas Infrastructure, that was formed to hold a stake in Gassled, which owns the Norwegian gas transport infrastructure, the world’s largest offshore gas transmission system – has received government approval and is expected to reach financial close in 2011.

---

**2010**

**Results**

Pre-tax profit for 2010 was CHF 516 million compared with CHF 438 million in 2009. Excluding a net goodwill impairment charge of CHF 191 million related to the sale of UBS Pactual in 2009, the pre-tax profit for 2010 would have decreased by CHF 113 million compared with 2009.

**Operating income**

Total operating income was CHF 2,058 million in 2010, compared with CHF 2,137 million in 2009. Lower performance fees and revenues following the sale of UBS Pactual were partly offset by reduced co-investment losses in real estate and lower operational losses.

**Operating expenses**

Total operating expenses were CHF 1,542 million in 2010, compared with CHF 1,698 million in 2009. Excluding the abovementioned goodwill impairment and restructuring charges of CHF 48 million during the year 2009, operating expenses would have increased by CHF 83 million in 2010, mainly due to increased personnel expenses. The increase was partly offset by reduced non-personnel expenses as a result of cost-saving initiatives in 2009 and lower expenses following the sale of UBS Pactual. In addition, non-personnel costs included an additional allocation of expenses to the business divisions from the Corporate Center in 2010.

Personnel expenses were CHF 1,096 million in 2010 compared with CHF 996 million in 2009, mainly due to increased expenses for prior years’ deferred variable compensation, partly offset by lower fixed compensation costs as a result of headcount reductions in 2009 and reduced expenses following the sale of UBS Pactual.

General and administrative expenses were CHF 400 million in 2010, compared with CHF 387 million in 2009, mainly due to higher sponsoring and branding costs related to the global relaunch of the UBS brand. The increase was partly offset by lower expenses following the sale of UBS Pactual.

Net charges to other business divisions were CHF 5 million in 2010, compared with CHF 74 million in 2009. Excluding a charge to the Corporate Center of CHF 149 million in 2009, we would have recorded net charges from other business divisions of CHF 75 million. The total 2009 goodwill impairment charge related to the sale of UBS Pactual was CHF 340 million, of which CHF 149 million was charged to the Corporate Center, as this was related to foreign exchange exposures managed by Group Treasury.

Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information on allocation of additional Corporate Center costs to the business divisions in 2010.

**Development of invested assets**

**Net new money**

Net new money inflows were CHF 1.8 billion in 2010 compared with net outflows of CHF 45.8 billion in 2009. Net inflows from third parties were CHF 18.2 billion in 2010 compared with net outflows of CHF 5.1 billion in 2009. Net outflows from clients of our wealth management businesses were CHF 16.4 billion in 2010 compared with net outflows of CHF 40.7 billion in 2009. Net new money in 2010 included CHF 2.5 billion resulting from a transfer of investment management responsibility for the US hedge fund business from Wealth Management Americas to Global Asset Management’s alternative and quantitative investments business.
Excluding money market flows, net new money inflows were CHF 8.2 billion in 2010 compared with net outflows of CHF 33.6 billion in 2009. Net inflows from third parties were CHF 16.2 billion in 2010 compared with net outflows of CHF 6.8 billion in 2009. Net outflows from clients of our wealth management businesses were CHF 8.1 billion in 2010 compared with net outflows of CHF 26.9 billion in 2009.

Some of the inflows and outflows relating to clients of our wealth management businesses are also reported as net new money in- and outflows for the Wealth Management & Swiss Bank and Wealth Management Americas business divisions.

Invested assets
Total invested assets were CHF 559 billion on 31 December 2010, compared with CHF 583 billion on 31 December 2009. Negative currency effects were only partly offset by positive market movements and net new money inflows.

Gross margin on invested assets
The gross margin was 36 basis points in 2010 compared with 37 basis points in 2009, reflecting lower performance fees primarily in alternative and quantitative investments, partly offset by lower co-investment losses in real estate and lower operational losses.

Results by business line

Traditional investments
Revenues were CHF 1,259 million compared with CHF 1,319 million, as lower operational losses were more than offset by decreased revenues following the sale of UBS Pactual in 2009.

The gross margin was 25 basis points compared with 26 basis points in the prior year, mainly due to lower performance fees and decreased revenues following the sale of UBS Pactual.

Net new money inflows were CHF 4.2 billion compared with net outflows of CHF 40.6 billion in the prior year. Excluding money market flows, net new money inflows were CHF 10.6 billion compared with net outflows of CHF 28.4 billion in the prior year. Equities saw net inflows of CHF 7.5 billion compared with net outflows of CHF 8.2 billion. Fixed income saw net inflows of CHF 9.7 billion compared with net outflows of CHF 5.6 billion. Multi-asset saw net outflows of CHF 6.3 billion compared with net outflows of CHF 14.5 billion.

Invested assets were CHF 487 billion on 31 December 2010, compared with CHF 502 billion on 31 December 2009. The net decrease reflects negative currency effects, partly offset by positive market movements and net new money inflows.

Alternative and quantitative investments
Revenues were CHF 325 million compared with CHF 405 million due to lower performance fees, which also resulted in a gross margin of 88 basis points compared with 102 basis points.

Net new money outflows were CHF 3.2 billion compared with net outflows of CHF 6.7 billion. Net new money in 2010 included CHF 2.5 billion related to the transfer of investment management responsibility for US hedge fund business from Wealth Management Americas to alternative and quantitative investments. Note that these are reported as invested assets in both business divisions as Wealth Management Americas continues to advise the clients of these funds.

Invested assets were CHF 34 billion on 31 December 2010, compared with CHF 41 billion on 31 December 2009 due to negative currency effects and net new money outflows, partly offset by positive market movements.

Global real estate
Revenues were CHF 258 million compared with CHF 185 million, mainly due to lower co-investment losses and higher performance fees.

Consequently, the gross margin was 68 basis points compared with 47 basis points.

Net new money inflows were CHF 0.6 billion compared with net inflows of CHF 1.4 billion.

Invested assets were CHF 36 billion on 31 December 2010, a decrease of CHF 3 billion from 31 December 2009, due to negative currency effects and market movements, partly offset by net new money inflows.

Infrastructure
Revenues were CHF 14 million compared with CHF 13 million.

Net new money inflows were CHF 0.1 billion, unchanged from the prior year.

Invested assets were CHF 1 billion on 31 December 2010, mostly unchanged from 31 December 2009.

Fund services
Revenues were CHF 202 million compared with CHF 214 million, mainly due to lower administrative fees due to lower average assets under administration and lower interest income.

The gross margin on assets under administration was 5 basis points, unchanged from the prior year.

Net new assets under administration outflows were CHF 0.8 billion compared with net outflows of CHF 59.7 billion in 2009. Total assets under administration were CHF 390 billion compared with CHF 406 billion, due to negative currency effects and net new assets outflows, partly offset by positive market movements.
2009

Results

Pre-tax profit for full year 2009 was CHF 438 million compared with CHF 1,333 million in 2008. Excluding a net goodwill impairment charge in 2009 of CHF 191 million related to the sale of UBS Pactual, restructuring costs in 2009 of CHF 48 million and a gain of CHF 168 million from the sale of our non-controlling interest in Adams Street Partners in 2008, pre-tax profit would have decreased 42% to CHF 677 million.

Operating income

Total operating income was CHF 2,137 million in 2009 compared with CHF 2,904 million in 2008 due to lower management fees associated with a lower average invested assets base and reduced income following the sale of UBS Pactual in 2009. This was partly offset by higher performance fees in alternative and quantitative investments as well as lower operational losses. Additionally, 2008 revenues included a gain of CHF 168 million from the sale of our non-controlling interest in Adams Street Partners.

Operating expenses

Total operating expenses were CHF 1,698 million in 2009 compared with CHF 1,572 million in 2008. Excluding a net goodwill impairment charge in 2009, and restructuring charges during the whole period, operating expenses would have declined 7% to CHF 1,459 million. This resulted from lower general and administrative expenses, partly offset by higher accruals for performance-related compensation due to higher performance fees in alternative and quantitative investments. In 2009, operating expenses included CHF 340 million in goodwill impairment charges related to the sale of UBS Pactual (of which CHF 149 million was charged to the Corporate Center as this was related to foreign exchange exposures managed by Group Treasury).

General and administrative expenses were CHF 387 million in 2009 compared with CHF 462 million in 2008, mainly due to lower entertainment expenses, marketing costs, IT costs and professional fees as a result of ongoing cost-saving measures and reduced expenses following the sale of UBS Pactual.

Net charges to other business divisions were CHF 74 million in 2009, compared with a net charge from other business divisions of CHF 88 million in 2008. Excluding the abovementioned charge to the Corporate Center of CHF 149 million, allocated costs were down by CHF 13 million, or 15%, from 2008 mainly due to lower allocated costs from service providers as a result of ongoing cost-saving measures and reduced charges following the sale of UBS Pactual.

Depreciation of property and equipment was CHF 36 million in 2009, down by CHF 8 million as a result of lower depreciation charges on premises, IT and software.

Development of invested assets

Net new money

Net new money outflows were CHF 45.8 billion for 2009 compared with outflows of CHF 103.0 billion for 2008. Excluding money market flows, net new money outflows were CHF 33.6 billion in 2009 compared with CHF 124.2 billion in 2008. Net outflows from clients of our wealth management businesses were CHF 40.7 billion in 2009 compared with CHF 47.1 billion in 2008. Some of the inflows and outflows relating to clients of our wealth management businesses are also reported as net new money in- and outflows for the Wealth Management & Swiss Bank and Wealth Management Americas business divisions.

Invested assets

Total invested assets were CHF 583 billion on 31 December 2009 compared with CHF 575 billion on 31 December 2008. The net increase reflected the positive impact of financial market developments, positive currency fluctuations and CHF 4.2 billion related to the transfer of the real estate investment management business from Wealth Management & Swiss Bank and was partly offset by the exclusion of UBS Pactual assets coupled with net new money outflows.

Gross margin on invested assets

The gross margin was 37 basis points in 2009, compared with 39 basis points in 2008. The calculation of 2008 gross margin included a CHF 168 million gain from the sale of our non-controlling interest in Adams Street Partners in 2008. The 2009 gross margin was supported by higher performance fees, primarily in alternative and quantitative investments, and lower operational losses, partly offset by reduced income following the sale of UBS Pactual.

Results by business line

Traditional investments

Revenues were CHF 1,319 million in 2009 compared with CHF 1,859 million in 2008 due to lower management fees associated with a lower average invested assets base and reduced income following the sale of UBS Pactual in 2009, partly offset by lower operational losses in 2009. Revenues in 2008 also included a gain of CHF 168 million from the sale of our non-controlling interest in Adams Street Partners.

The gross margin was 26 basis points compared with 29 basis points in the prior year. The 2008 gross margin included the abovementioned gain from the sale of our non-controlling interest in Adams Street Partners. The 2009 gross margin was also favorably impacted by lower operational losses.

Net new money outflows were CHF 40.6 billion compared with net outflows of CHF 88.9 billion in the prior year. Excluding money market flows, net new money outflows were CHF 28.4
billion compared with net outflows of CHF 110.1 billion in the prior year. Equities saw net outflows of CHF 8.2 billion compared with net outflows of CHF 31.5 billion. Fixed income saw net outflows of CHF 5.6 billion compared with net outflows of CHF 30.9 billion. Multi-asset saw net outflows of CHF 14.5 billion compared with net outflows of CHF 48.6 billion.

Invested assets were CHF 502 billion on 31 December 2009, compared with CHF 493 billion on 31 December 2008. The net increase reflects the positive impact of financial market developments and positive currency fluctuations, partly offset by the exclusion of UBS Pactual assets coupled with net new money outflows.

Alternative and quantitative investments
Revenues were CHF 405 million compared with CHF 430 million due to lower net management fees associated with a lower average invested assets base. Performance fees were up by CHF 87 million.

The gross margin was 102 basis points compared with 69 basis points primarily due to higher performance fees.

Net new money outflows were CHF 6.7 billion compared with net outflows of CHF 14.8 billion.

Invested assets were CHF 41 billion on 31 December 2009, unchanged from 31 December 2008. The positive impact of financial market developments was offset by net new money outflows and negative currency fluctuations.

Global real estate
Revenues were CHF 185 million compared with CHF 277 million due to losses from co-investments and lower management fees associated with a lower average invested assets base.

This also resulted in a lower gross margin of 47 basis points compared with 63 basis points.

Net new money inflows were CHF 1.4 billion compared with net outflows of CHF 0.3 billion.

Invested assets were CHF 39 billion, a decrease of CHF 1 billion from 31 December 2008 due to the negative impact of market developments, mostly offset by CHF 4.2 billion related to the transfer of the real estate investment management business from Wealth Management & Swiss Bank and net new money inflows.

Infrastructure
Revenues were CHF 13 million, down by CHF 2 million from the prior year, predominantly a result of swings in exchange rates.

Net new money inflows were CHF 0.1 billion compared with net inflows of CHF 1.0 billion.

Invested assets were CHF 1 billion on 31 December 2009, unchanged from 31 December 2008.

Fund services
Revenues were CHF 214 million compared with CHF 322 million, mainly due to a lower average base of assets under administration and lower interest income.

The gross margin on assets under administration was 5 basis points compared with 6 basis points.

Net new assets under administration outflows were CHF 59.7 billion compared with net outflows of CHF 61.1 billion.

Total assets under administration were CHF 406 billion compared with CHF 425 billion due to net new assets outflows and negative currency fluctuations, partly offset by positive impact of financial market developments.
Investment Bank

Business description

The Investment Bank provides a broad range of products and services to corporate and institutional clients, sovereign and governmental bodies, financial intermediaries, alternative asset managers and private investors. Products and services offered include securities sales, trading and execution, capital raising, advisory services and investment research across all major capital markets.

Business

The Investment Bank has three distinct and aligned business areas:
- equities
- fixed income, currencies and commodities (FICC)
- the investment banking department (IBD)

The equities and FICC businesses are organized under the securities business area to foster a higher degree of alignment and co-operation across our sales and trading businesses. Together, equities and FICC offer access to the primary and secondary securities markets, foreign exchange and prime brokerage services as well as research on equities, fixed income, commodities, and economic, strategic and quantitative research. IBD plays a lead role in marketing the Group to corporates, leveraging its senior client relationships.

Strategy

Our strategy is centered on an aligned and integrated client-centric business model built around flow and advice, and is supported by a disciplined risk control framework. Our business involves risk-taking to facilitate and intermediate client transactions. However, our trading strategies are subject to tight balance sheet and risk limits, which are controlled by our risk framework.

In supporting our strategy, we have created a securities platform to unify our capabilities in equities and FICC. Our securities strategy is focused on delivering performance across asset classes, giving clients easier access to the entire firm and creating value in the process. We continued to grow our credit, rates and emerging markets businesses, leveraging both existing and new talent as part of our rebuild in FICC. On a selective basis, and marked against hurdle rates and strict criteria, we have re-entered certain businesses relevant to our strategy. We also developed further capabilities in the commodities business. In equities, in addition to enhancing our position in cash equities, we are targeting growth in equity derivatives, exchange-traded derivatives and prime brokerage.

In IBD, we are focused on strengthening our market position in the Americas, while we continue to be among the leaders in Europe, the Middle East and Africa, and Asia Pacific regions.

Organizational structure

The Investment Bank is comprised of the three business areas described above. Additionally, the global capital markets business is a joint venture between securities and IBD, which consists of two separate areas: equity capital markets and debt capital markets. Global leveraged finance is a joint venture between IBD and FICC and includes the global syndicated finance business. We employ approximately 17,000 personnel in over 30 countries.

We operate through branches and subsidiaries of UBS AG. Securities activities in the US are conducted through UBS Securities LLC, a registered broker-dealer.

Significant recent acquisitions, disposals and business transfers

Key acquisitions and business transfers over the past three years include:
- the sale of our Brazilian financial services business, UBS Pactual in 2009; and
- the agreement to acquire Link Investimentos, a Brazilian financial services firm, announced in 2010.

Competitors

Our main competitors continue to be the major global investment banks, including Bank of America/Merrill Lynch, Barclays Capital, Citigroup, Credit Suisse, Deutsche Bank, Goldman Sachs, JP Morgan Chase and Morgan Stanley.

Products and services

Securities

The implementation of the securities organizational structure combined previously distinct trading and sales activities into a holistic business with the goal of improving our market position and overall client service. We aligned certain sales functions across equities and FICC products, resulting in a coordinated securities distribution platform with enhanced cross-asset delivery and specialist skills. Across securities, we also aligned some of our key capabilities, including global capital markets, quantitative analysis and prime services activity as well as a central treasury and trading function for the securities business. Securities research provides in-depth investment analysis across various asset classes on more than 3,000 companies worldwide, or about 80% of the global...
market capitalization across 55 markets. In addition, we have a specialist research function offering quantitative analysis, socially responsible investing, alternative research, valuation and accounting, and special situations analysis.

Equities

We are a leading participant in the world’s primary and secondary markets for equity, equity-linked and equity derivative products. We distribute, trade, finance and clear cash equity and equity-linked products. We also distribute new equity and equity-linked issues, and provide research on companies, sectors, geographic markets and macroeconomic trends as part of securities research. Equities has the technology required to support multi-instrument electronic execution for direct market access trading. We have aligned the prime brokerage, exchange-traded derivatives and fixed income clearing businesses within an integrated prime services organization, to provide a more seamless client relationship experience, improve service efficiency and position our business for increased transparency and regulatory changes in over-the-counter (OTC) derivative products.

Equities has global product and functional management, multi-regional operations and strongly embedded local expertise in all major developed and developing markets. The main business lines of the equities business area are:

- **Cash equities** provides clients with investment advisory, trade execution offerings and related consultancy services, together with comprehensive access to the primary markets, corporate management and subject matter expertise. We provide full-service trade execution for single stocks and portfolios, deliver capital commitment, block trading, small cap execution services, commission management services, and a full suite of advanced electronic trading strategies, platforms and analytical tools.

- **Derivatives and equity-linked** provide exchange-traded and structured or customized solutions to our clients. In addition to products with returns linked to equities or indices, we offer products linked to hedge funds, mutual funds, and real estate and commodity indices in a variety of formats such as over-the-counter, securitized, fund-wrapped and exchange-traded. We also offer a full range of convertible products, synthetic and structured products, and global access to primary and secondary markets.

- **Prime services** offers an integrated global prime brokerage business, including multi-asset class clearing and custody, capital consultancy, securities lending and equity swaps execution. The exchange-traded derivatives business is part of this product suite, including execution and clearing services and access to 70 global exchanges. These services are provided through a client-centric service model to hedge funds, banks, asset management and other financial services clients, including corporations, commodity traders, wealth management firms and aggregators.

Fixed income, currencies and commodities

The FICC business area delivers products and solutions to corporate, institutional and public sector clients in all major markets, as well as to private clients via targeted intermediaries. In 2010, to add product diversity and better service clients across the entire fixed income product suite, we selectively re-entered the market in certain (previously exited) products, including several commodities products. The main business lines of the FICC business area are:

- **Macro** consists of the foreign exchange, money market and interest rate sales and trading businesses, as well as cash and collateral trading. We provide a range of foreign exchange, precious metals, treasury, and liquidity management solutions to institutional and private clients via targeted intermediaries. Interest rate activities include standardized rate-driven products and services such as interest rate derivatives trading, underwriting and trading of government and agency securities.

- **Credit sales and trading** encompasses the origination, underwriting, trading and distribution of cash and synthetic products across the credit spectrum – bonds, derivatives, notes and loans. We are active across all major markets in secondary trading and market-making of flow and structured credit instruments, securitized products and loans, and are focused on providing tailored solutions for our clients. In partnership with IBD, we also provide capital markets debt financing and liability risk management solutions to corporates and institutions.

- **The emerging markets** business offers investors in Central and Eastern Europe, the Middle East, Latin America and selected Asian countries access to international markets, and provides international investors with an opportunity to add exposure via our onshore presence in key locations. We also provide liquidity in the local markets across foreign exchange, credit, rates and structured products.

Investment banking department

IBD provides strategic advice and a range of capital markets execution services to corporate clients, financial institutions, financial sponsors, sovereign clients, wealth funds and hedge funds. With a presence in all major financial markets, investment banking coverage is based on a wide ranging matrix of country, sector and product banking professionals.

The main business lines of the IBD business area are:

- The **advisory group** assists in acquisitions and sale processes, and also advises on strategic reviews and corporate restructuring solutions.

- **Global capital markets** is a joint venture with the securities business. It offers financing and advisory services that cover all forms of capital raising as well as risk management solutions. It comprises the equity capital markets business, aligned with equities, whose products include initial public offerings, secondary offerings and equity-linked transactions; and the debt capital markets business, aligned with FICC, whose products include commercial paper, medium-term notes, senior debt, high-yield debt, subordinated debt and hybrid capital. All our financing products are provided alongside risk management solutions, which include derivatives, structured finance, ratings advisory services and liability management.

- **Global leveraged finance** provides event-driven (acquisition, leveraged buyout) loans, and bond and mezzanine leveraged finance to corporate customers and financial sponsors.

---

1. Includes CHF 172 million in credit losses related to reclassified and acquired securities in 2010.
2. Represents own credit changes of financial liabilities designated at fair value through profit or loss. The cumulative own credit gain for such debt held at 31 December 2010 amounts to CHF 0.2 billion. This gain has reduced the fair value of financial liabilities designated at fair value through profit or loss recognized on our balance sheet. Refer to “Note 27 Fair value of financial instruments” in the financial statements of this report for more information.
3. For the definitions of our key performance indicators, refer to the “Measurement and analysis of performance” section of this report.
4. Not meaningful if either the current period or the comparison period is a loss period.
5. Neither the cost/income nor the compensation ratio are meaningful if revenues in the Investment Bank are negative.
6. Based on third-party view, i.e. without intercompany balances.
7. Refer to the “Capital management” section of this report for more information about the equity attribution framework.
2010

Results

In 2010, we recorded a pre-tax profit of CHF 2,197 million compared with a pre-tax loss of CHF 6,081 million in 2009, primarily as a result of increased revenues in FICC, a significant reduction in net credit loss expenses and lower own credit losses on financial liabilities designated at fair value.

Operating income

Total operating income in 2010 was CHF 12,010 million compared with CHF 3,135 million in the prior year. This was mainly a result of increased revenues in the FICC business, a significant reduction in net credit loss expense and lower own credit losses on financial liabilities designated at fair value, and was partly offset by lower revenues in the equities business.

Credit loss expense/recovery

The net credit loss expense in 2010 was nil compared with net credit loss expense of CHF 1,698 million in 2009. In 2010, we recorded CHF 172 million credit loss expenses related to reclassified and acquired securities which were offset by recoveries on certain legacy leveraged finance and asset backed loan positions.

⇒ Refer to the “Risk management and control” section of this report for more information on our risk management approach, method of credit risk measurement and the development of credit risk exposures.

Own credit

The own credit on financial liabilities designated at fair value reduced significantly to a loss of CHF 548 million from a loss of CHF 2,023 million. While our credit spreads tightened in both years, the effect in 2010 was less pronounced than in 2009.

⇒ Refer to “Note 27 Fair value of financial instruments” in the “Financial information” section of this report for more information on own credit.

Operating income by business segment

Investment banking

Investment banking revenues were CHF 2,414 million in 2010, marginally down from CHF 2,466 million in the previous year.

Advisory revenues decreased slightly to CHF 846 million from CHF 858 million. While the overall market fee pool increased year on year, our market share declined.

Capital markets revenues were down 21% to CHF 1,994 million from CHF 2,514 million. Equity capital markets revenues were CHF 1,020 million, down 37% from CHF 1,609 million due to reduced market activity in the first half of 2010 following uncertainty over sovereign risk in Europe, and lower revenues in Asia Pacific as domestic Chinese banks took a greater share of fees than in 2009. Fixed income capital market revenues were CHF 974 million, up 8% from CHF 904 million, mainly due to a strong leverage capital market fees pool and market share gain.

Other fee income and risk management revenues were negative CHF 426 million compared with negative CHF 906 million, primarily due to the absence in 2010 of large losses as recorded in 2009, due to an overall stabilization of the credit markets.

Securities

Securities revenues were CHF 10,144 million, compared with CHF 4,390 million in 2009. Revenues of Equities and FICC are analyzed in the respective sections below.

Equities

Revenues in equities were CHF 4,469 million, down 9% from CHF 4,937 million in 2009.

Cash revenues were CHF 1,776 million, compared with CHF 1,959 million due to lower commission income as a result of decreased client activity in the US, offsetting stronger performance in EMEA.

Derivatives and equity-linked revenues were CHF 1,580 million, in line with last year. Derivatives revenues were up as a result of improved client flows and structured products performance in Asia Pacific, partly offset by lower revenues in EMEA due to the sovereign debt crisis, creating a lack of both liquidity and client flow. Equity-linked revenues were down after a strong performance in 2009.

Within the prime services business, revenues were CHF 1,036 million compared with CHF 1,058 million. Prime brokerage revenues declined due to lower average spreads whilst exchange-traded derivatives revenues marginally improved.

Other equities revenues were CHF 77 million compared with CHF 341 million, largely due to lower proprietary trading revenues partially offset by reduced funding and hedging costs.

Fixed income, currencies and commodities

Revenues were positive CHF 5,675 million in 2010 compared with negative CHF 547 million in 2009, when the FICC business was materially affected by losses on residual risk positions.

In credit, revenues rose significantly to positive CHF 2,304 million, up from negative CHF 1,932 million. The turnaround was largely due to the rebuild across the trading and sales businesses, particularly in structured credit and client solutions, as well as lowering of negative revenues from the legacy risk portfolio (the exposure to which was also reduced during this period), and the selective re-entry into previously exited products.

In macro, revenues of CHF 2,249 million were down from CHF 2,933 million in 2009. The decrease mainly stemmed from lower revenues in the rates and foreign exchange businesses, which were affected by a significant decline in market spreads, low interest rate volatility, reduced client activity and general de-risking, particularly in the second half of 2010.

Emerging markets revenues decreased to CHF 521 million from CHF 1,162 million as divesture of UBS Pactual, spread compress-
sion experienced across foreign exchange and credit markets, and uncertainties over European sovereign debt impacted liquidity and overall client volumes.

Other FICC revenues were positive CHF 601 million compared with negative CHF 2,710 million. The 2010 revenues included CHF 737 million from residual risk positions due to a reduced credit valuation adjustment requirement and net gains on sale.

Operating expenses
Operating expenses increased 6% to CHF 9,813 million in 2010 from CHF 9,216 million in the previous year.

Personnel expenses increased 21% to CHF 6,743 million from CHF 5,568 million, mainly due to increased variable compensation as a result of amortization of prior years’ awards, increased number of employees and a UK Bank Payroll Tax charge of CHF 190 million.

General and administrative expenses increased to CHF 2,693 million in 2010 from CHF 2,628 million in 2009. This was largely due to an increase in legal provisions as well as higher sponsoring and branding costs related to the global re-launch of the UBS brand. These costs were partially offset by a reduction in professional fees.

Net charges from other business divisions were CHF 64 million, compared with a net charge to other business divisions of CHF 147 million.

Depreciation reduced 23% to CHF 278 million in 2010 from CHF 360 million in 2009. Depreciation in 2009 included costs associated with a restructuring charge.

Goodwill impairment charges were nil in 2010 compared with a charge of CHF 749 million in 2009, related to the sale of UBS Pactual.

Amortization of intangible assets was CHF 34 million compared with CHF 59 million in 2009.

In addition, non-personnel costs included an additional allocation of expenses from the Corporate Center to the business divisions in 2010.

Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information on allocation of additional Corporate Center costs to the business divisions in 2010.
2009

Results

In 2009, we recorded a pre-tax loss of CHF 6,081 million compared with a pre-tax loss of CHF 34,300 million in 2008, primarily due to a reduction in losses on residual risk positions.

Operating income

Total operating income in 2009 was positive CHF 3,135 million, up from negative CHF 24,375 million in 2008, mainly due to substantially reduced losses on risk positions within the FICC business.

Credit loss expense/recovery

We recorded net credit loss expenses of CHF 1,698 million for 2009, compared with net credit loss expenses of CHF 2,575 million in 2008. Excluding the credit loss expenses from reclassified securities of CHF 425 million, our net credit loss expenses amounted to CHF 1,273 million in 2009.

➔ Refer to the “Risk management and control” section of this report for more information on our risk management approach, method of credit risk measurement and the development of credit risk exposures

Own credit

The own credit loss on financial liabilities designated at fair value was CHF 2,023 million as our credit spreads narrowed in 2009, compared with a CHF 2,032 million gain in 2008.

➔ Refer to “Note 27 Fair value of financial instruments” in the “Financial information” section of this report for more information on own credit

Operating income by business segment

Investment banking

Revenues of the investment banking department were CHF 2,466 million in 2009, down 14% from CHF 2,880 million in the previous year primarily due to reduced advisory revenues partially offset by increases in capital market revenues.

Mergers and acquisitions activity remained subdued during the year with global volumes reaching their lowest annual total since 2004, according to Thomson Reuters. As a result, advisory revenues decreased 47% to CHF 858 million across all regions.

Capital market revenues improved 36% in 2009. Equity capital markets revenues were up 65% to CHF 1,609 million with Europe, the Middle East, Africa and the Asia Pacific region performing well, as investors turned to the equity market for financing, increasing total market volumes by 42% compared with 2008, according to Dealogic. Fixed income capital markets revenues increased 4% to CHF 904 million as global issuance levels rose in 2009 by 38% compared with 2008, based on Dealogic’s debt capital markets classification.

Securities

Securities revenues were CHF 4,390 million compared with negative CHF 26,712 million in 2008. Revenues of Equities and FICC are analyzed in the respective sections below.

Equities

Revenues in equities were CHF 4,937 million in 2009, down 5% from CHF 5,184 million in 2008. Equity market conditions were difficult in 2009, impacting our overall business performance, as did the loss of some key personnel in the first part of the year. We made a number of strategic hires during the second half of the year.

Cash equity revenues were impacted by lower market volumes and a loss in market share.

Derivatives and equity-linked revenues were up compared with 2008. Equity-linked revenues increased significantly as all regions benefited from improvements in valuations and liquidity, partly offset by lower derivatives revenues.

Within the prime services business, revenues in both prime brokerage and exchange-traded derivatives declined. Reductions in prime brokerage revenues were due to a weaker dividend season and lower client balances in the first half of 2009. Declines in exchange-traded derivatives were due to weaker volumes and less favorable interest and margin balances.

Other equities revenues, including proprietary trading, improved with a strong performance recorded across all geographical regions.

Fixed income, currencies and commodities

Revenues were negative CHF 547 million in 2009, up from negative CHF 31,895 million a year earlier. The FICC result continued to be affected by losses on residual risk positions, which had a material impact particularly in the first half of 2009, but decreased significantly in the second half of the year. Despite the overall loss, the core FICC businesses contributed positive revenues in 2009 as the businesses were rebuilt, funding costs were normalized, and liquidity improved.

Credit revenues improved in 2009 as key hires were engaged and residual risk positions were steadily reduced.

In macro, rates business was impacted by movements in our credit spreads on the valuation of our derivative positions. Foreign exchange and money markets revenues were in line with 2008. Emerging markets revenues increased despite the sale of UBS Pactual, as all regions continued to perform well, most notably in Eastern Europe, the Middle East and Africa.

As we continued to reduce our residual risk positions, we incurred losses related to the liquidation of these positions. Losses on credit valuation adjustments for exposure to monoline insurers arising from purchased credit default protection totaled CHF 0.8 billion in 2009. Losses from credit valuation adjustments incurred in the first quarter of 2009 were only partially offset by gains in the rest of the year, resulting from commutation of a number of
UBS business divisions and Corporate Center
Investment Bank

trades in the second and third quarters. Other areas which incurred losses in first quarter 2009 had a less material impact on the remainder of the year.

Operating expenses
Operating expenses declined to CHF 9,216 million in 2009, from CHF 9,925 million in 2008.

Personnel expenses were CHF 5,568 million in 2009, a 7% increase from the previous year primarily due to higher variable compensation. Salary increases were partly offset by headcount reductions and reduced restructuring costs.

General and administrative expenses decreased to CHF 2,628 million in 2009 from CHF 3,830 million in 2008. This was largely due to reduced legal provisions and real estate restructuring provisions, along with continuing reductions in professional fees, travel and entertaining and market data services resulting from headcount reductions and cost-cutting measures.

Net charges to other business divisions were CHF 147 million in 2009, compared with a net charge from other business divisions in 2008 of CHF 41 million.

Depreciation reduced 19% to CHF 360 million in 2009 from CHF 447 million in 2008, as real estate restructuring charges were lower in 2009. Amortization of intangible assets was CHF 59 million in 2009 compared with CHF 83 million in the prior year. A goodwill impairment charge of CHF 749 million related to the sale of UBS Pactual was incurred in 2009 (of which CHF 328 million was charged to the Corporate Center as this was related to foreign exchange exposures managed by Group Treasury), compared with a CHF 341 million goodwill impairment charge relating to the exit of the municipal securities business in 2008.

Included in the 2009 operating expenses is a restructuring charge of CHF 226 million, consisting of CHF 102 million of personnel expenses and CHF 123 million of costs related to real estate.
Corporate Center

Business description

The Corporate Center seeks to ensure that UBS operates as a coherent and effective whole, by providing and managing support and control functions for the business divisions and the Group, in the areas of risk, finance (including funding, capital and balance sheet management and management of non-trading risk), legal and compliance, information technology, human resources, real estate, procurement, communication and branding, corporate development, security and service centers.

Aims and objectives

The Corporate Center assists our business divisions through provision of Group-level control in the areas of finance, risk and legal and compliance, as well as through a global corporate shared services organization comprising support and logistics functions. We strive to maintain an appropriate balance between risk and return, and control our corporate governance processes, including compliance with relevant regulations. Each functional head in the Corporate Center has authority over all businesses in their area of responsibility, including the authority to issue Group-wide policies for that area.

The integration of Group-wide shared service functions (information technology, human resources, real estate, procurement, communication and branding, corporate development, security and offshoring) into the Corporate Center was successfully completed in 2009. The focus in 2010 was on centralization, governance and the set-up of business-aligned shared services. The result was a new global corporate shared services organization supporting the business divisions under the leadership of the Group Chief Operating Officer (COO). In parallel, the control functions were centralized under the Group Chief Financial Officer (CFO), the Group Chief Risk Officer (CRO), and the Group General Counsel (GC).

As a result, we have moved further towards sustainable efficiency improvements, effective execution and increased service quality. We have improved our cost management for global and Group-wide cost responsibilities, and have implemented simple service delivery models with clear responsibilities. A new investment governance process is in place to provide oversight, review and approval of programs in the investment portfolio, and those in the pipeline. This is part of a global service level agreement framework, ensuring alignment of investments with the Group’s strategic priorities.

At the end of 2010, across all shared services functions, the Corporate Center had approximately 19,400 employees. Almost all headcount and costs of the centralized functions are re-allocated to the business divisions for which the respective services are performed. The new governance process ensures cost transparency and consistency across service providers and consumers (the business divisions).

The integration of the control and support functions into the Corporate Center creates the foundation for superior Group-wide effectiveness and efficiency, as the operating models of individual functions and cross-functional synergies are optimized. Overall, the integrated structure helps us to maintain a strong, independent control function and provides a strong platform from which we can increase efficiency, create synergies for revenue growth and enhance shareholder value.
Organizational structure

The Corporate Center consists of the control functions Group Finance, Group Risk, and Group General Counsel, in addition to the shared services functions.

Group Chief Financial Officer (Group CFO)
The Group CFO is responsible for transparency in, and appraisal of, the financial performance of the UBS Group (Group) and business divisions, the Group's financial reporting, forecasting, planning and controlling processes, and for providing advice on financial aspects of strategic projects and transactions in collaboration with Corporate Development. The Group CFO manages the divisional and Group financial control functions. The Group CFO manages and controls our tax affairs and treasury and capital management, including management and control of funding and liquidity risk as well as regulatory capital ratios. After consultation with the Audit Committee, the Group CFO makes proposals to the Board of Directors (BoD) regarding the standards for accounting we have adopted, and defines the standards for financial reporting and disclosure. Together with the Group Chief Executive Officer (CEO), the Group CFO provides external certifications under sections 302 and 404 of the Sarbanes-Oxley Act 2002, and in coordination with the Group CEO, manages relations with analysts, investors and the rating agencies.

Group Chief Operating Officer (Group COO)
The Group COO is responsible for the management and performance of the shared service functions of the Group, including the management and control of Group-wide information technology, procurement, real estate and corporate administrative services, human resources, strategy, communications and branding as well as for physical and information security and offshoring services of UBS. In addition, the Group COO supports the Group CEO in strategy development and key strategic issues. The Group COO also acts as the CEO of the Corporate Center, and oversees the business and strategic planning of the shared services.

Group Chief Risk Officer (Group CRO)
The Group CRO is responsible for developing and implementing principles and appropriate independent control frameworks for credit, market, country and operational risks within the Group. In particular, the Group CRO formulates and implements the frameworks for risk capacity/appetite, risk measurement, portfolio controls and risk reporting; and has management responsibility over the divisional and firm-wide risk control functions. The Group CRO implements the risk control mechanisms as determined by the BoD, the BoD Risk Committee or the Group CEO. In addition, the Group CRO approves transactions, positions, exposures, portfolio limits and provisions in accordance with the delegated risk control authorities, and monitors and challenges the firm’s risk-taking activities.

Group General Counsel (Group GC)
The Group GC has Group-wide responsibility for legal and compliance matters, policies and processes and for managing the legal and compliance function. The Group GC is responsible for establishing a Group-wide management and control process for our relationship with regulators, in close cooperation with the Group CRO and the Group CFO where relevant, and for maintaining the relationships with our key regulators with respect to legal and compliance matters. The Group GC is further responsible for reporting legal and compliance risks and material litigation, for managing litigation and special and regulatory investigations, and for ensuring that we meet relevant regulatory and professional standards in the conduct of our business.

Corporate Center cost savings

The Corporate Center allocates operating expenses to the business divisions according to service consumption.

In 2010, the Corporate Center had a cost base excluding variable compensation of just below CHF 7.5 billion which includes personnel costs of CHF 3.2 billion. The retained total operating expenses relate to Group governance functions and Group items which cannot be allocated to specific business divisions.

As mentioned in the text describing the Corporate Center, the integration of the control and support functions has created a superior foundation for Group-wide efficiencies. In 2010, the Corporate Center was able to reduce its cost base excluding variable compensation before allocation by CHF 605 million from the previous year, primarily as a result of lower personnel costs in IT and lower real estate-related costs.

The business divisions fully benefited from the reduced cost base through lower allocations.
Treasury activities and other corporate items reporting

From 2010 onwards, almost all costs incurred by the Corporate Center related to shared services and control functions are allocated to the reportable segments, which directly and indirectly receive the value of the services, either based on a full cost recovery or on a periodically agreed flat fee.

➔ Refer to “Note 1a 33) Segment reporting” and “Note 1b Allocation of additional Corporate Center costs to reportable segments” in the “Financial information” section of this report for more information

The allocated costs are shown in the respective expense lines of the reportable segments in “Note 2a Segment reporting” in the “Financial information” section, and in the “UBS business divisions and Corporate Center” section of this report.

The Corporate Center reporting table was renamed to “Treasury activities and other corporate items” to reflect the changes in presentation of the Corporate Center information. It predominantly includes the results of treasury activities, e.g. from the management of structural foreign exchange risks and interest rate risks, residual operating expenses such as those associated with the functioning of the Group Executive Board and the Board of Directors, other costs related to organizational management, as well as a limited number of specifically defined items. These items include the valuation of UBS’s option to acquire the SNB StabFund’s equity and expenses such as capital taxes, as well as the difference between actually incurred Corporate Center costs and periodically agreed flat fees charged to the business divisions.

➔ Refer to the discussion of “Net income from treasury activities and other” in the “UBS results” section of this report for more information on significant items and treasury-related income

Audited information according to IFRS 7 and IAS 1

Risk disclosures provided in line with the requirements of the International Financial Reporting Standard 7 (IFRS 7) Financial Instruments: Disclosures, and disclosures on capital required by the International Accounting Standard 1 (IAS 1) Financial Statements: Presentation form part of the financial statements audited by our independent registered public accounting firm Ernst & Young Ltd., Basel. This information (the audited texts, tables and graphs) is marked by a bar on the left-hand side throughout this report and is incorporated by cross-reference into the financial statements of this report.
Risk management and control

– Disciplined risk management and control are essential to our success. In 2010, we continued to make significant investments in our infrastructure, processes, methodologies and people to ensure that our risk frameworks are sufficiently robust to support our risk appetite and business aspirations.

– Our risk appetite is established within our risk capacity as determined by a complementary set of firm-wide risk metrics, and is approved under Board of Directors (BoD) authority. It is administered and enforced by a detailed limit framework of portfolio and position limits at both UBS Group (Group) and business division levels.

In 2010, increased risk taking was authorized for incremental trading activity, particularly to support client flow activity, and also for loan underwriting. Outside of these two areas, the core risk profile of the firm remained largely unchanged. Reduction of our residual risk positions remained a priority in 2010. We further reduced our exposures to monoline insurers, student loan auction rate securities and certain restructured legacy leveraged finance positions, thereby decreasing our impaired loan portfolio.
Treasury management

- We continued to maintain focus on asset quality and building up capital by increasing our tier 1 capital by CHF 3.5 billion and to further strengthen and safeguard our liquidity position by raising over CHF 15 billion equivalent of public benchmark bonds.

- We have re-defined treasury interactions between business divisions and desks, improved tools and reporting, and introduced a new Group-wide funds transfer pricing process.

Our total assets stood at CHF 1,317 billion on 31 December 2010, down CHF 23 billion (2%) from CHF 1,341 billion on 31 December 2009. The reduction occurred mainly in replacement values as market and currency movements drove down positive replacement values by CHF 21 billion (to CHF 401 billion). Our funded asset volume, which excludes positive replacement values, remained relatively unchanged, declining by CHF 3 billion in 2010.

In 2010, we continued to maintain a sound liquidity position and a diversified portfolio of funding sources, despite the potential uncertain impact of developments in financial regulatory reforms and the significant market volatility caused by uncertainties regarding the global macroeconomic environment, including certain European fiscal and sovereign debt concerns.

Over the course of 2010, as investors became gradually more risk tolerant, credit spreads and incremental funding costs for most global financial institutions, including UBS, generally narrowed throughout the yield curve. We raised over CHF 15 billion equivalent of public benchmark bonds with an average maturity of 5.5 years. This exceeded the combined amount of public benchmark bonds and other long-term straight debt which matured, or was redeemed, during 2010. Our customer cash deposits in our wealth and asset management business divisions at year-end 2010 were stable compared with the prior year-end when adjusted for currency effects.

In response to the prolonged low yields, treasury supported and implemented measures to improve Wealth Management & Swiss Bank's margin income through income-generating fixed receiver swap and bond portfolios.

Group Treasury continued to earn interest income on equity through its portfolio of interest rate products and managed the currency effects on equity and key ratios. Profits and losses in foreign currencies were hedged to protect shareholder value.

At year-end 2010, our BIS tier 1 ratio was 17.8%, and the BIS total capital ratio was 20.4%. While overall BIS risk-weighted assets declined by CHF 7.7 billion to CHF 198.9 billion, our BIS tier 1 capital increased by CHF 3.5 billion to CHF 35.3 billion. Our financial stability allowed us to call and redeem tier 1 and tier 2 instruments in 2010. Nevertheless, the BoD has decided to further bolster capital and has therefore not proposed any dividend for the financial year 2010.

We continued to use the equity attribution framework to guide our businesses in the allocation of resources to opportunities that are expected to provide the best risk-adjusted profitability contributions.

As of 31 December 2010, we had a total of 3.8 billion shares issued, an increase of 273 million shares compared with 31 December 2009. The conversion of CHF 13 billion in mandatory convertible notes on 5 March 2010 led to an issuance of 273 million shares from conditional capital.
Risk management and control

Disciplined risk management and control are essential to our success. In 2010 we continued to make significant investments in our infrastructure, processes, methodologies and people to ensure that our risk frameworks are sufficiently robust to support our risk appetite and business aspirations. Our risk appetite is established within our risk capacity as determined by a complementary set of firm-wide risk metrics, and is approved under Board of Directors authority. It is administered and enforced by a detailed limit framework of portfolio and position limits at both Group and business division levels. Each element of our risk control framework plays a key role in the decision-making processes within the firm. All material risks are reported to the respective authority holders at least monthly. In 2010, increased risk-taking was authorized for incremental trading activity, particularly to support client flow activity, and also for loan underwriting. Outside of these two areas, the core risk profile of the firm remained largely unchanged. Reduction of our residual risk positions remained a priority in 2010. We further reduced our exposures to monoline insurers, student loan auction rate securities and certain restructured legacy leveraged finance positions, thereby decreasing our impaired loan portfolio.

Summary of key developments in 2010

The most important developments that took place in 2010 with regard to risk management and control include:

- On a net basis (new credit loss expenses minus recoveries), credit losses at the Group level were CHF 66 million, significantly down from CHF 1,832 million in 2009. Our Swiss and international loan portfolios were materially unchanged.

- Our impaired loan portfolio decreased by CHF 2.7 billion, primarily due to sales of certain restructured legacy leveraged finance positions, without the incurrence of any meaningful incremental costs to the firm.

- During the second half of the year, our market risk profile increased moderately from previously low levels (on both an absolute basis and a relative basis to our peers) in line with our previously communicated growth plans in the Investment Bank. This is reflected in the development of our value-at-risk (VaR) and market risk related risk-weighted assets (RWA).

- After repurchasing USD 7.6 billion at par value of outstanding client holdings of student loan auction rate securities (ARS) in 2010, our remaining purchase commitment at the end of the year was immaterial with a par value of USD 63 million. Despite the material buy-backs, our inventory of student loan ARS decreased by net USD 0.6 billion to USD 9.8 billion, as a result of significant redemptions and sales in the secondary market.

- We commuted several trades with monoline insurers, which along with an increase in the fair values or the remaining insured assets resulted in a reduction of our net exposure to monoline insurers after credit valuation adjustments (CVA) to USD 1.6 billion. Based on fair values, only 2% of our remaining portfolio of assets hedged with monoline insurers related to US residential mortgage-backed securities collateralized debt obligations (RMBS CDO). Approximately 73% of the remaining assets were collateralized loan obligations (CLO), the vast majority of which were rated AA and above.

- Our sovereign exposures are subject to limits and are actively managed under an established country risk control framework. As a result, sovereign exposures are commensurate with the rating of each country and the size of each economy. Sovereign exposures of industrialized European countries rated AA and below were materially reduced on a gross and net basis during the year. In addition, we do not have material sovereign risk exposures in the Middle East and North African region.

- We have made further significant enhancements to our firm-wide risk measures and tools. Our stress testing framework has continued to evolve, including the development of new scenarios to capture our risk exposure to extreme market events and macroeconomic developments.

- Since the start of 2009, the Swiss Financial Market Supervisory Authority (FINMA) has conducted regular stress tests on the two large Swiss banks. In July 2010, FINMA carried out a stress test which assumed a severe global recession and very sharp, specific shocks for certain European countries. FINMA’s analysis showed that UBS “would have a tier 1 ratio of at least 8% under the stress events tested.”

- In anticipation of the enhanced Basel II framework, we further enhanced our risk appetite framework by making it more comprehensive and relevant to the current financial environment. New measures supplementing the current market risk capital have been introduced, enabling compliance with the enhanced Basel II requirements.

- Over the last two years, we took comprehensive steps to help ensure that our compensation plans and processes were redesigned and implemented in such a way to ensure appropriate risk-taking. Risk awareness, assessment and management were integrated into our compensation framework. They now form a basis for designing our compensation plans, determining the overall bonus pool, allocating individual bonuses, and identifying and monitoring performance and compensation of key risk takers and controllers across the organization.
We made significant investments in our risk IT platforms during 2010, particularly in the Investment Bank, where we are designing and building a new platform for risk aggregation. Key improvements being introduced include enhanced data quality and detail, automated reporting with ad-hoc analysis and drilldown capability, and re-engineered analytics for more accurate VaR calculations. Work in this area is ongoing.

In order to standardize methodology, processes and tools for credit monitoring across our wealth management locations, we began global deployment of a new monitoring solution for this business. Additionally, in our Global Asset Management business, we commenced deployment of a third-party risk measurement application, which will facilitate improved reporting and provide our portfolio managers with enhanced risk management models.

- We refer to the "Credit risk", "Market risk", "Operational risk", "Risk concentrations" and "Liquidity and funding management" sections of this report for more information.
- Refer to the "Compensation" section of this report for more information on our compensation practices.

**Risk management and control principles**

We have five key principles that support the firm in achieving an appropriate balance between risk and return:

- Protection of financial strength by controlling our overall risk exposures and assessing potential risk concentrations at position and portfolio levels, as well as across all risk types and business divisions.
- Reputation protection, which depends on a sound risk culture characterized by a holistic and integrated view of risk, performance and reward, including effectively managing and controlling risks. Our risk culture demands that all employees make protecting the firm’s reputation a priority.
- Management is accountable for all risks in their business, and is responsible for the continuous and active management of their respective risk exposures to ensure that risk and return are balanced.
- Independent control functions oversee the risk-taking activities of the business, the effectiveness of risk management in the business and the mitigation of operational risks.
- Disclosure of risk to provide comprehensive and transparent reporting to senior management, the Board of Directors (BoD), shareholders, regulators, rating agencies and other stakeholders.

Our risk management and control principles are implemented through a risk management and control framework. This framework comprises qualitative elements such as policies and authorities, and quantitative components including risk measurement methodologies and risk limits.

In addition, the framework is dynamic and continuously adapted as our businesses and the market environment evolve. It includes clearly defined processes to deal with new business initiatives as well as large and complex transactions.

**Risk management and control responsibilities**

Key roles and responsibilities for risk management and control are:

- The BoD is responsible for determining the firm’s risk principles, risk appetite and major portfolio limits, including their allocation to the business divisions. The BoD is supported by a BoD Risk Committee (RC), which monitors and oversees the firm’s risk profile and the implementation of the risk framework as established by the BoD. The BoD RC also assesses and approves the firm’s key risk measurement methodologies.
- The Group Executive Board (GEB) implements the risk framework, controls the firm’s risk profile and approves all major risk policies.
- The Group Chief Executive Officer (Group CEO) is responsible for the results of the firm, has risk authority over transactions, positions and exposures, and also allocates portfolio limits approved by the BoD within the business divisions.
- The divisional CEOs are accountable for the results of their business divisions including actively managing their risk exposures, and ensuring that risks and returns are balanced.
- The Group Chief Risk Officer (Group CRO) reports directly to the Group CEO and has functional and management authority over risk control throughout the firm. Risk Control provides independent oversight of risk and is responsible for implementing the risk control processes for credit, country, market, investment and operational risks. This includes establishing methodologies to measure and assess risk, setting risk limits and developing and operating an appropriate risk control infrastructure. The risk control process is supported by a framework of policies and authorities, which are delegated to Risk Control Officers, corresponding to their experience and scope of responsibilities.
- The Group Chief Financial Officer (Group CFO) is responsible for ensuring that disclosure of our financial performance is clear and transparent and meets regulatory requirements and corporate governance standards. The Group CFO is also responsible for implementing the risk management and control framework for capital management, liquidity, funding and tax.
- The Group General Counsel (Group GC) is responsible for implementing the firm’s risk management and control principles for legal and compliance matters.

**Risk categories**

The risks faced by our businesses can be broken down into three different categories: primary risks, consequential risks and business risks. Primary and consequential risks result from our business activities and are subject to independent risk control. Primary risks consist of credit risk, country risk, market risk (including issuer risk) and investment risk. Consequential risks consist of operational risk, which includes legal, compliance and tax risks, and liquidity and funding risks. Definitions of primary and consequential risks are provided below:
Risk measurement

Risk and treasury management
Risk management and control

- Credit risk: the risk of loss resulting from the failure of a client or counterparty to meet its contractual obligations.
- Country risk: the risk of loss resulting from country-specific events. It includes transfer risk, whereby a country’s authorities prevent or restrict the payment of an obligation, as well as systemic risk events arising from country-specific political or macroeconomic developments.
- Market risk and investment risks: the risk of loss resulting from changes in market variables, whether to our trading positions or financial investments.
- Operational risk: the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external causes, whether deliberate, accidental or natural. This includes risks related to legal, compliance and tax matters.
- Liquidity and funding risks: the risk that we might be unable to either meet our payment obligations when due or to borrow funds in the market at an acceptable price to fund actual or proposed commitments.

Finally, business risks arise from the commercial, strategic and economic risks inherent in our business activities. It is management’s responsibility to manage these risks.

→ Refer to the “Credit risk”, “Market risk”, “Operational risk” and “Liquidity and funding management” sections of this report for a description of the control frameworks for these risk categories.

Statistical loss and stress loss

We assess potential future losses using two complementary types of risk measures: statistical loss and stress loss.

Statistical loss

Statistical loss measures include VaR, expected loss (EL) and earnings-at-risk (EaR). VaR estimates the losses which could potentially be realized over a set time period at an established level of confidence. EL is used to measure the average annual costs that are expected to arise from our credit portfolios and from operational risks. EaR is comprised of core statistical measures overlaid with management judgment, and measures the potential shortfall in our earnings, which could potentially be realized over a set time period at an established level of confidence.

→ Refer to the “Credit risk”, “Market risk” and “Operational risk” sections of this report for a description of our key statistical loss measures.

Stress loss

To complement our statistical loss measures and better understand our risk capacity and appetite, we also perform stress testing. Stress loss is the loss that could result from extreme events under specified scenarios. We use stress testing to quantify our exposures to plausible yet extreme and unusual market movements, and to enable us to identify, understand and manage our potential vulnerabilities and risk concentrations. Our stress testing framework incorporates a comprehensive range of portfolio-specific stress tests as well as combined firm-wide stress tests.

Portfolio-specific stress tests are measures that focus on risks of specific portfolios within the business divisions. Our portfolio stress loss measures are characterized by past events but also include forward-looking elements. The stress scenarios for trading risks capture the liquidity characteristics of different markets and positions. Our stress frameworks include a scenario which reflects the extreme market conditions that were experienced at the height of the financial crisis in the fourth quarter of 2008.

Combined stress testing (CST) captures firm-wide exposure to a number of global systemic events, including a severe global recession. These stress tests are based on forward-looking macroeconomic and market event scenarios calibrated to different levels of severity. The evolution of economic variables and market indicators under these scenarios is defined and applied to our entire risk portfolio. The impact of primary, consequential and business risks is assessed with the aim of calculating the loss and capital implications should these stress scenarios be realized.

Stress test results are included in risk reporting and are important inputs for the risk control, risk appetite and business planning processes of the firm. Our firm-wide stress testing, which captures all major risks across our business divisions, is one of the key inputs for discussions between senior management, the BoD and regulators with regard to our risk profile. We continue to provide detailed stress analyses to FINMA in accordance with their requirements.

The stress scenarios are reviewed, updated and expanded regularly in the context of the macroeconomic and geopolitical environment by a committee comprised of representatives from the business divisions, Risk Control and Economic Research. Our stress testing therefore attempts to provide a control framework that is forward-looking and responsive to changing market conditions. However, the market moves experienced in real stress events may differ from moves envisaged in our scenario specifications.

Most major financial firms employ stress tests, but their approaches vary significantly, and there are no industry standards
defining stress scenarios or the way they are applied to a firm’s positions. Consequently, comparisons of stress results between firms can be misleading and, therefore, like most of our peers, we do not publish quantitative stress test results.

➔ Refer to the “Credit risk” and “Market risk” sections of this report for a description of our key stress loss measures

**Group risk appetite framework**

Our risk appetite framework establishes risk appetite objectives in respect of earnings and capital levels that we seek to maintain, even after experiencing severe losses over a defined time horizon. In order to monitor our risk profile against our risk appetite, we use our two complementary firm-wide risk measurement frameworks: EaR (together with its extension, capital-at-risk (CaR)) and CST. Both frameworks capture risks across all of our business divisions and from all major risk categories, including primary risks, consequential risks and business risks. These measures are significant components of our risk control, capital management and business planning processes, which are described in more detail below.

- EaR is measured as the potential shortfall in earnings at a 95% confidence level and is evaluated over both three-month and one-year periods.
- CaR extends EaR to consider the impact on BIS tier 1 capital of a more severe earnings shortfall and is measured at confidence levels from 95% to 99.9%.
- CST supplements EaR and CaR. As described in the “Stress loss” section above, our firm-wide stress tests evaluate the impact across our risk portfolios, and thereby on our earnings and capital, based on specified macroeconomic stress scenarios.

Our risk appetite is approved by the BoD. Risk appetite is based on our risk capacity, which is in turn based on our capital and forecasted earnings resources. Our overall risk appetite is set as an upper limit covering the aggregate risk exposure for each risk appetite objective, taking into account inherent limitations in the precision of risk exposure measures that focus on extreme market and economic events. Comparison of the firm’s risk exposure with our risk capacity under prevailing operating conditions as well as prospective business plans serves as an input to the risk limit framework. This comparison is also a key tool to support management decisions on potential adjustments to the risk profile of our firm.

➔ Refer to the “Credit risk”, “Market risk” and “Risk concentration” sections of this report for more information on our risk exposures

**Risk disclosures**

The measures of risk exposure that we use may differ depending on the purposes for which exposures are calculated: financial accounting under International Financial Reporting Standards (IFRS), determination of our required regulatory capital or our internal management. The exposures detailed in the “Credit risk” and “Market risk” sections are typically based on our internal management view of risk exposure.

➔ Refer to the “Basel II Pillar 3” section of this report for further information on the exposures we use in the determination of our required regulatory capital
Credit risk

Credit risk is the risk of loss resulting from the failure of a client or counterparty to meet its contractual obligations to UBS. This can be caused by factors directly related to the counterparty, such as business or management problems, which cause failures in the settlement process, for example, in foreign exchange transactions where we have fulfilled our obligation but the counterparty fails to deliver the counter-value (settlement risk). Alternatively, it can be triggered by economic or political difficulties in the country in which a counterparty or issuer of a security is based or where it has substantial assets (country risk).

Sources of credit risk

Credit risk arises from traditional banking products such as loans, loan commitments and guarantees (for example, letters of credit). Credit risk also arises from traded products including over-the-counter (OTC) derivative transactions, exchange-traded derivatives, as well as securities financing transactions such as repurchase agreements (repos and reverse repos) and securities borrowing and lending transactions. The risk control processes applied to these products are generally the same, although the accounting treatment may vary as products can be carried at amortized cost (loans and receivables), at fair value through profit and loss (instruments held for trading, instruments designated at fair value) or at fair value through other comprehensive income (available-for-sale instruments) depending on the product type and the nature of the exposure. A form of credit risk also arises on securities and other obligations in tradable form, as their fair values are affected by changing expectations regarding the probability of issuers failing to meet these obligations or when actual failures occur. Where these securities and obligations are held in connection with a trading activity, we view the risk as a market risk. Debt securities not held in connection with a trading activity are reported as debt investments at the end of this section. Many of the business activities of Wealth Management & Swiss Bank and the Investment Bank expose us to credit risk, while credit risk exposures from Wealth Management Americas and Global Asset Management are less material.

Credit risk control

Limits and controls

Limits are established for individual counterparties and their counterparty groups covering banking and traded products, as well as settlement amounts. These limits apply not only to the current outstanding amount, but also to contingent commitments and the potential future exposure of traded products. Credit engagements may not be entered into without the appropriate approvals and adherence to limits.

In the Investment Bank, a distinction is made between exposures intended to be held to maturity (take-and-hold exposures) and those which are intended to be held for a short term, pending distribution or risk transfer (temporary exposures).

Credit risk concentrations can arise if clients are engaged in similar activities, are located in the same geographical region or have comparable economic characteristics, for example, if their ability to meet contractual obligations would be similarly affected by changes in economic, political or other conditions. To avoid credit risk concentrations, we establish limits and/or operational controls to constrain risk concentrations at portfolio and sub-portfolio levels with regard to sector exposures, country risk and specific product exposures.

Risk mitigation

We actively manage the credit risk in our portfolios by taking collateral against exposures and utilizing credit hedging. In Wealth Management & Swiss Bank, the majority of loans are extended on a secured basis. For real estate financing, a mortgage over the property is taken to secure the claim. Commercial loans may also be secured by mortgages on business premises or other real estate. We apply measures to evaluate collateral and determine maximum loan-to-value ratios including an assessment of income cover.

Lombard loans are made against the pledge of eligible marketable securities or cash. The Investment Bank also takes collateral in the form of marketable securities and cash in its OTC derivatives and securities financing businesses. Discounts (haircuts) are generally applied to the market value of the collateral reflecting the quality, liquidity and value volatility of the underlying collateral. Exposure and collateral values are continuously monitored, and margin calls or close-out procedures are enforced when the market value of collateral falls below a predefined trigger level. Concentrations within individual collateral portfolios and across clients are also monitored where relevant and may affect the haircut applied to a specific collateral pool.

Our OTC derivatives trading is generally conducted under bilateral International Swaps and Derivatives Association (ISDA), or ISDA-equivalent, master trading agreements, which allow for the close-out and netting of all transactions in the event of default. We also have two-way collateral agreements with major market participants under which either party can be required to provide collateral in the form of cash or marketable securities when the exposure exceeds a predefined level. Our OTC derivatives activity with lower-rated counterparties is typically conducted under one-way collateral agreements where only the counterparty is required to provide us with collateral. For certain counterparties, like hedge funds, we may also use two-way collateral agreements. We have clearly defined processes for entering into netting and collateral
agreements, including the requirement to have a legal opinion on the enforceability of contracts in relevant jurisdictions in the case of insolvency.

Primarily in the Investment Bank, we actively manage the credit risk of our portfolios with the aim of reducing its concentrations toward specific counterparties, sectors or portfolios. Hedging measures include single-name credit default swaps (CDS), index CDS, credit-linked notes and total return swaps. Single-name CDS are generally executed under bilateral netting and collateral agreements with high-grade market counterparties. We observe strict standards for recognizing credit hedges; for example, we usually do not recognize credit risk mitigants such as proxy hedges (credit protection on a correlated but different name) or index CDS for the purposes of monitoring exposures against limits. Buying credit protection creates credit exposure against the hedge provider. We monitor our exposures to credit protection providers and the effectiveness of credit hedges as part of our overall credit exposures to the relevant counterparties. Where there is significant correlation between a counterparty and the hedge provider (so-called wrong-way risk), our policy is to discourage such activity, but in any event, not to recognize any hedge benefit in credit risk measures.

→ Refer to the “Basel II Pillar 3” section of this report for more information on credit derivatives

Credit risk measurement

We have developed tools and models to measure credit risk. Exposures to individual counterparties are measured based on three generally accepted parameters: probability of default, exposure at default and loss given default. These parameters are the basis for the majority of our internal measures of credit risk, and are key inputs for the regulatory capital calculation under the advanced internal ratings-based (advanced IRB) approach of the framework governing international convergence of capital measurement known as Basel II. We also use models to derive the portfolio credit risk measures of expected loss, statistical loss and stress loss.

Probability of default

The probability of default (PD) is an estimate of the likelihood of a counterparty defaulting on its contractual obligations. This probability is assessed using rating tools tailored to the various categories of counterparties. These categories are also calibrated to our internal credit rating scale (masterscale) designed to ensure a consistent assessment of default probabilities across counterparties. We regularly assess the performance of our rating tools and adjust our model parameters as necessary. In addition to using ratings for credit risk measurement, we use them as an important input to determine credit risk approval authorities.

In the Investment Bank, rating tools are applied to broad segments including banks, sovereigns, corporates, funds, hedge funds and commercial real estate. We determine our choice of the relevant assessment criteria, for example, financial ratios and qualitative factors, for the rating tools on the basis of various statistical analyses, externally available information and expert judgment.

Within our retail and corporate banking business in Switzerland, we rate our business and corporate clients in the small-to-medium enterprise (SME) segment using statistically developed scorecards. The underlying data used in our scorecards is predominantly based on a combination of clients’ financial information, qualitative criteria and credit loss history over several years. To rate our large corporate clients domiciled in Switzerland, Wealth Management & Swiss Bank uses templates established for this segment by our Investment Bank. We assess the probability of default from loans secured on owner-occupied or investment properties with a model that takes loan-to-value ratios and debt service capacity of the obligor into account. We rate lombard loan exposures by means of a model simulating potential changes in the value of the collateral, and the probability that it may become lower than the loan amount.

Our masterscale expresses default probabilities that we determine through our various rating tools by means of distinct classes, whereby each class incorporates a range of default probabilities. Counterparties migrate between rating classes as our assessment of their probability of default changes.

The ratings of the major credit rating agencies, and their equivalents on our masterscale, are shown in the “UBS internal rating scale and mapping of external ratings” table. The mapping is based on the long-term average of one-year default rates that we observed for each external rating grade. Observed defaults by rating agencies may vary through economic cycles, and we do not necessarily expect the actual number of defaults in our equivalent rating band to equal the rating agencies average in any given period. We periodically assess the long-term average default rates of credit rating agencies’ grades, and we adjust their mapping to our masterscale as necessary to reflect any material changes.

Exposure at default
Exposure at default (EaD) represents the amount that we expect to be owed by a counterparty at the time of default. We derive EaD from our current exposure to the counterparty and the possible future development of that exposure.

The EaD of a loan is the drawn or face value of the loan. For loan commitments and guarantees, the EaD includes the amount drawn as well as potential future amounts that may be drawn, which are estimated based on historical observations.

For traded products, we derive the EaD by modeling the range of possible exposure outcomes at the time the counterparty defaults. For securities financing transactions, we assess the net amount that may be owed to us or that we may owe to others, taking into account the impact of market moves over the potential time it takes to close out all our positions. For exchange-traded derivatives, our calculation of EaD accounts for daily cash marging. We derive the EaD for OTC derivatives by modeling the potential development of replacement values of the portfolio of trades by counterparty (potential credit exposure) less the values of legally enforceable netting agreements. For collateralized OTC derivatives, our potential credit exposure is based on the development of collateral values and the price correlation between the various instruments.

When measuring individual counterparty exposure against credit limits, we consider the maximum likely exposure measured to a high confidence level of outstanding obligations. However, when aggregating exposures to different counterparties for portfolio risk measurement purposes, we use the expected exposure to each counterparty at a given time period (usually one year) generated by the same model.

We monitor the performance of our exposure models by backtesting and benchmarking them, whereby model outcomes are compared against actual results based on our internal experience as well as externally observed results.

We assess our exposures where there is a material correlation between the factors driving the credit quality of the counterparty and those driving the potential development of our traded product exposure (wrong-way risk), and we have established specific controls to address these risks.

Loss given default
We determine loss given default (LGD) based on the likely recovery rate of claims against defaulted counterparties, which is a function of the type of counterparty and any credit mitigation or support by way of security interest or guarantees. LGD estimates include loss of principal and interest and other amounts, such as workout costs, including the cost of carrying an impaired position during the workout process. In our Investment Bank, LGD estimates are based on an assessment of key risk drivers such as industry segment, collateral and seniority of a claim as well as a country’s legal environment and bankruptcy procedures, supported by our internal loss data and external information where available. In our other lending portfolios, the LGD differs by counterparty and collateral type and is statistically estimated based on our internal loss data. Where we hold collateral, such as marketable securities or a mortgage over a property, loan-to-value ratios are a key factor in determining LGD.

Expected loss
Credit losses are an inherent cost of doing business, but the occurrence and amount of credit losses can be erratic. In order to quantify future credit losses that may be implicit in our current portfolio, we use the concept of expected loss (EL).

EL is a statistical measure used to estimate the average annual costs that we expect to experience from positions in our current credit portfolio that become impaired. The EL for a given credit facility is a function of the three components described above: PD, EaD and LGD. We aggregate the EL for individual counterparties to derive our expected portfolio credit losses.

EL is the basis for quantifying credit risk in all our portfolios. It is also the starting point for the measurement of our portfolio statistical loss and stress loss and may be used as an input to value certain products.

➔ Refer to the discussion on “Impairment and default – distressed claims” below for more information

Statistical and stress loss
We use a statistical modeling approach to estimate the loss profile of our credit portfolios over a one-year period to a specified level of confidence. The mean value of this loss distribution is the EL, with the variation around due to systematic default relationships among counterparties within, and between, segments and which is sensitive to concentration risks on individual counterparties and groups of counterparties. The results of this analysis provide an indication of the level of risk in our portfolio and the way it may develop over time.

Stress loss is a scenario-based measure which complements our statistical modeling approach. We use it to assess our potential loss in various stress scenarios based on the assumption that one or more of the three key credit risk parameters will deteriorate substantially. We run stress tests on a regular basis and use them to monitor our portfolios and identify potential risk concentrations. For certain of our portfolios and segments, stress loss may also be subject to limits.

➔ Refer to the discussion on stress loss in this section for more information

Composition of credit risk – UBS Group
The exposures detailed in the tables in this section are based on our management view of credit risk.

The “Credit exposure by business division” table shows a breakdown of our banking and traded product exposures before and after allowances and provisions, CVA and specific hedges. Portfolio hedges, such as index CDS, are not included in this analysis. Banking product exposures are shown on a nominal basis, without applying credit conversion factors. Exposures to OTC de-
derivatives are shown in the table as net positive replacement values after the application of legally enforceable netting agreements and the deduction of cash collateral. Exchange-traded derivatives (ETD) exposures take into account initial and variation margins. Securities financing exposures are shown net of the collateral we received. Comparative figures for 2009 are also shown on this basis.

Our total credit exposure before deductions amounted to CHF 445 billion on 31 December 2010, compared with CHF 451 billion at the end of 2009. Our banking product exposures remained materially unchanged at CHF 356 billion as of 31 December 2010. Our traded products exposures, which arise largely in our Investment Bank, declined by CHF 7 billion to CHF 89 billion as of 31 December 2010, due to the decrease of CHF 11 billion in the replacement values of OTC derivatives. The largest component of our credit exposure before deductions as of 31 December 2010 was our loan portfolio, accounting for CHF 242 billion or 54% of our total credit exposure. Of this, CHF 202 billion was attributable to Wealth Management & Swiss Bank.

Further information on the composition and credit quality of Wealth Management & Swiss Bank's loan portfolio and the Investment Bank's banking products and OTC derivatives portfolios is provided in this section. Analysis of our Investment Bank and Wealth Management & Swiss Bank portfolios is based on net exposure (i.e. after deduction of hedges) because we actively utilize credit hedging to manage our risks in these portfolios.

➔ Refer to “Note 1b Changes in accounting policies, comparability and other adjustments” for more information on the reclassification of cash collateral from derivative transactions and prime brokerage receivables and payables

➔ Refer to the “Basel II Pillar 3” section of this report for more information on the credit exposures used in the determination of our required regulatory capital and additional information on credit derivatives

➔ Refer to “Note 23 Derivative instruments and hedge accounting” and “Note 29c Measurement categories of financial assets and liabilities” in the “Financial information” section of this report for further information on IFRS required disclosures on derivatives and credit risk

Composition of credit risk – business divisions

Wealth Management & Swiss Bank

The total gross banking products exposure of Wealth Management & Swiss Bank was CHF 233 billion on 31 December 2010, compared with CHF 228 billion on 31 December 2009. The high quality of this portfolio is illustrated by the rating and loss given default distributions shown in the “Wealth Management & Swiss Bank: distribution of net banking products exposure across UBS internal rating and loss given default buckets” table. Approximately 60% of Wealth Management & Swiss Bank’s banking product portfolio is rated investment grade, with over 80% of it categorized in the lowest LGD bucket of 0–25%.

As of 31 December 2010, Wealth Management & Swiss Bank’s gross loan portfolio had increased slightly to CHF 202 billion, compared with CHF 197 billion on 31 December 2009, mainly in our Asia Pacific region, with exposure increases in local currencies cushioned by the strengthening of the Swiss franc. Of Wealth Management & Swiss Bank’s loan portfolio, 92% was secured by collateral, of which CHF 144 billion was secured by real estate and CHF 43 billion by marketable securities. The majority of the real estate exposure is secured by a portfolio of Swiss residential property (single and multi-family homes), which have typically exhibited a low risk profile.

Wealth Management & Swiss Bank’s gross unsecured loan portfolio amounted to CHF 15.4 billion on 31 December 2010, with half of this portfolio rated as investment grade. Approximately 55% of the unsecured portfolio related to cash-flow-based lending to corporate counterparties, and 32% of the unsecured loans related to public authorities, mainly in Switzerland, as of 31 December 2010.

Wealth Management Americas

The total gross banking products exposure of Wealth Management Americas increased to CHF 26 billion on 31 December 2010, compared with CHF 23 billion on 31 December 2009. This portfolio consists mainly of loans secured by marketable securities. These loans are of high quality, with 93% (88% in 2009) rated as investment grade.

**Investment Bank**

The “Investment Bank: banking products and OTC derivatives exposure” table shows the Investment Bank’s credit exposures to banking products and OTC derivatives before and after allowances and provisions, CVA and specific hedges based on our internal risk view. Portfolio hedges, such as index CDS, are not included in this analysis. The gross banking product exposures shown in this table exclude nostro accounts and money market balances, which are included in the “Credit exposure by business division” table.

Approximately 90% of the Investment Bank’s net OTC derivative portfolio was traded with counterparties rated investment grade, the majority of which were banks and regulated financial institutions with which trading was conducted on a collateralized basis.

Approximately 60% of the Investment Bank’s net banking products portfolio was rated investment grade, with the majority of exposures related to its lending activities with corporates and other non-banks.

The subsequent tables provide additional analysis of the portfolio by our internal rating and LGD, industry sector and geographical region.

The Investment Bank’s net banking products exposure to corporates and other non-banks remained stable at CHF 41.6 billion as of 31 December 2010. The Investment Bank continued to actively manage the credit risk on this portfolio and as of 31 December 2010 it held CHF 29 billion of single-name CDS hedges against its exposures to corporates and other non-banks.

The Investment Bank’s net banking products exposure to corporates and other non-banks continued to be diversified across

Loan to BlackRock fund

In the second quarter of 2008, we sold a portfolio of US residential mortgage-backed securities (RMBS) for USD 15 billion to the RMBS Opportunities Master Fund, LP (RMBS fund), a special-purpose entity managed by BlackRock Financial Management, Inc. The RMBS fund was capitalized with approximately USD 3.75 billion in equity raised by BlackRock from third-party investors and an eight-year amortizing USD 11.25 billion senior secured loan provided by UBS.

The RMBS fund amortizes the loan through monthly payments drawn from amounts collected from the underlying assets. These collections are allocated to the payment of interest and principal of the loan and to the holders of equity interests in the RMBS fund in accordance with the terms of the loan agreement. Allocations to equity holders may be reduced or suspended in the event of specified declines in the aggregate notional balance of the portfolio, and we may assume control of the underlying assets in the event of a specified further decline in the notional balance.

As of 31 December 2010, the loan had a balance outstanding of USD 5.7 billion (USD 7.1 billion on 31 December 2009), taking into account amounts held in escrow. This loan balance is also reflected in the Investment Bank’s credit exposures shown in the tables on the previous pages. The aggregate notional balance of the RMBS fund’s assets collateralizing the loan on 31 December 2010 was USD 13.4 billion. By notional balance, the portfolio was comprised primarily of Alt-A (53%) and sub-prime (33%) credit grades. In terms of priority, the portfolio was dominated by senior positions (95%).

The RMBS fund is not consolidated in our financial statements. We continue to monitor the RMBS fund and its performance and will reassess the consolidation status if events warrant and deterioration of the underlying RMBS mortgage pools indicates that the equity investors in the fund no longer receive the majority of the risks and rewards. We also continue to assess the loan to the RMBS fund to determine whether it has been impaired. Developments through the year ended 31 December 2010 have not altered our conclusion that the loan is not impaired and that consolidation is not required.

Impairment and default – distressed claims

With respect to distressed claims resulting from banking products, we distinguish between loans that are “past due” and those that are “impaired”. We consider a loan to be past due when a contractual payment has been missed. We consider a loan as impaired if it is probable that we will not fully recover all contractual payments due under the loan as a result of the borrower’s inability, or unwillingness, to meet its obligations after realization of available collateral. Past due but not impaired loans are those that have suffered missed payments, but are not considered impaired because we expect to collect all amounts due under the contractual terms of the loans or the equivalent value. We also assess claims from securities financing transactions for default and impairment using the same principles and processes as we use for banking products.

We have established processes to ensure that the carrying values of impaired claims are determined in compliance with IFRS requirements. Our credit controls applied to valuation and workout are the same for both amortized cost and fair-valued credit products. With exception of a part of the mortgage portfolio and small unsecured retail account overdrafts, we assess each identified case individually. Our workout strategy and estimation of recoverable amounts are independently approved.

None of the portfolios with collective loan loss provisions are included in the totals of impaired loans in the tables shown in the composition of credit risk for business divisions in the “Credit risk” section of this report.

We also assess our portfolios of claims carried at amortized cost with similar credit risk characteristics for collective impairment in order to consider if these portfolios contain impaired obligations where the individual impaired items cannot yet be identified. In our retail and corporate banking business in Switzerland, we typically review individual positions for impairment only after they have been in arrears for a certain time. To cover the time lag between the occurrence of an impairment event and its identification, we establish collective loan loss allowances based on the expected loss for the portfolio over the average period between trigger events and the identification of individual impairment. Collective loan loss allowances of this kind are typically not required for our investment banking businesses because we continuously monitor individual counterparties and exposures to identify impairment events at an early stage.

Additionally, for all of our portfolios we assess whether there have been any unforeseen developments which might result in impairments but that are not immediately observable. These events could be stress situations, such as a natural disaster or a country crisis, or they could result from structural changes in the legal or regulatory environment. To determine whether an event-driven collective impairment exists, we use a set of global economic drivers to regularly assess the most vulnerable countries and review the impact of any potential impairment event.

The recognition of impairment in our financial statements depends on the accounting treatment of the claim. For products carried at amortized cost, impairment is recognized through the creation of an allowance or provision charged to the income statement as a credit loss expense. For products recorded at fair value, such as derivatives, a deterioration of the credit quality is recognized through a CVA charged to the income statement through the Net trading income line.

 Refer to “Note 27a Valuation principles” in the “Financial information” section of this report for more information on CVA.

Impaired loans, allowances and provisions

The credit risk exposures reported in the table “Allowances and provisions for credit losses” represent the IFRS balance sheet view of our gross banking products portfolio. This comprises the balance sheet line items Balances with central banks, Due from banks and Loans as well as the off-balance sheet items Guarantees and Loan commitments. The table also shows the IFRS reported allowances and provisions for credit losses and impairments.

The table shows that our allowances and provisions for credit losses, excluding collective loan loss provisions (CLLP) of CHF 47 million, decreased 56% to CHF 1,193 million on 31 December 2010 from CHF 2,720 million (excluding CLLP of CHF 49 million) at the end of 2009.

We consider a reclassified security an impaired loan if the carrying value at the balance sheet date is, on a cumulative basis, 5% or more below the carrying value at the reclassification date adjusted for redemptions.

Our gross impaired loan portfolio decreased to CHF 4,172 million on 31 December 2010 from CHF 6,829 million on 31 December 2009.

The ratio of the impaired loan portfolio to the total loan portfolio (both measured gross) was 1.6% on 31 December 2010 compared with 2.5% on 31 December 2009. For loans excluding securities the ratio was 0.9% on 31 December 2010 compared with 2.3% on 31 December 2009.

We reclassified loans and receivables with carrying amounts of CHF 39 million and CHF 58 million from impaired to performing during 2010 and 2009 respectively. This reclassification occurred because the loans had either been renegotiated and the new terms and conditions met normal market criteria for the quality of the obligor and type of loan, or because the financial position of the obligor improved, enabling it to repay any past due amounts such that we deemed future principal and interest to be fully collectible in accordance with the original contractual terms.

Collateral held against our impaired loan portfolio mainly consisted of real estate and multi-asset-backed securities. It is our policy to dispose of foreclosed real estate as soon as practicable. The carrying amount of foreclosed property recorded in our balance sheet under Other assets at the end of 2010 and 2009 amounted to CHF 90 million and CHF 245 million, respectively.

We seek to liquidate collateral held in the form of financial assets expeditiously and at prices considered fair. This may require us to purchase assets for our own account, where permitted by law, pending orderly liquidation.

¹ Excludes reclassified securities with adverse cash flow estimate revisions cumulatively below 5% of the carrying value at reclassification date, adjusted for redemptions. ² Excludes CHF 47 million collective loan loss allowances (31.12.09: CHF 49 million). ³ Refer to "Note 29b Reclassification of financial assets" in the "Financial information" section of this report.
The table “Impaired assets by type of financial instrument” includes impaired loans, impaired loan commitments, guarantees and defaulted derivative and securities financing transactions, which are subject to the same workout and recovery processes. Our impaired assets decreased significantly by CHF 5.5 billion to CHF 6.5 billion on 31 December 2010, mainly due to sales of legacy loan positions.

After deducting allocated specific allowances, provisions and CVA of CHF 2.4 billion and the estimated liquidation proceeds of collateral of CHF 2.3 billion, net impaired assets amounted to CHF 1.8 billion as of 31 December 2010.

➔ Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for more information on the reclassification of the cash collateral from derivative transactions as well as prime brokerage receivables and payables.

➔ Refer to “Note 9b Due from banks and loans” in the “Financial information” section of this report for more information on the changes in allowances and provisions for credit losses.

Settlement risk

Settlement risk arises in transactions involving exchange of value where we must fulfill our obligation to deliver without first being able to determine with certainty that we will receive the counter-value. We use multilateral and bilateral agreements with counterparties to reduce our actual settlement volumes.

Our most significant source of settlement risk is foreign exchange transactions. UBS is a member of Continuous Linked Settlement (CLS), a foreign exchange clearing house which allows transactions to be settled on a delivery-versus-payment basis, thereby significantly reducing foreign exchange-related settlement risk relative to the volume of business.

The mitigation of settlement risk through CLS membership and other means, such as payment netting, does not eliminate our credit risk in foreign exchange transactions resulting from changes in exchange rates prior to settlement. We measure and control such counterparty risk in forward foreign exchange transactions as part of our overall credit risk management of OTC derivatives.

Country risk

Country risk is the risk of loss arising from country-specific events. We have a well established country risk control framework to actively manage and limit, as necessary, our trading, lending, issuer and investment risk. This framework is intended to ensure that our exposure to a certain country is commensurate with the credit rating we assign to it, and that it is not disproportionate to our exposure to a certain country is commensurate with the credit rating we assign to it, and that it is not disproportionate to our overall country risk profile.

We assign ratings to all countries where we have exposure. Sovereign ratings express the probability of a country risk event that would lead to impairment of our claims. The default probabilities we use, and our mapping of external ratings of the major rating agencies, are based on our counterparty rating classes as described in the "Probability of default" section above. In our country rating scale, the rating classes 10 to 13 are designated "very high risk", i.e. countries in default with regard to selective obligations, or with heightened political, macroeconomic and/or systemic risks. The lowest rating class contains countries in outright default and a state of economic collapse. For all countries rated 3 and below, we set country risk ceilings approved either by the BoD or under delegated authority by the Group CEO or Group CRO. A country risk ceiling applies to all our exposures to counterparties or issuers of securities and financial investments in the respective country. Our country risk measures cover cross-border transactions and investments as well as our local operations, branches and subsidiaries in countries where the risk is material. We may limit the extension of credit, transactions in traded products or positions in securities based on a country ceiling, even if our exposure to a counterparty is otherwise acceptable.

Losses due to counterparty or issuer defaults resulting from multiple insolvencies (systemic risk) or general prevention or restriction of payments by authorities (transfer risk) are the most significant effects of a country crisis. For internal measurement and control of country risk, we also consider the financial impact of market disruptions arising prior to, during and following a country crisis. These may take the form of a severe deterioration in a country's debt and equity markets and asset prices or a sharp depreciation of the currency.

Additional information on our exposures to countries that we categorize as emerging markets is provided in the “Emerging markets net exposure by UBS internal country rating category” and “Emerging markets net exposure by major geographical area and product type” tables.

We use stress testing to assess the potential financial impact of a severe emerging markets crisis. This involves identifying countries that may potentially be subject to a crisis event, determining potential losses and making assumptions about recovery rates depending on the types of transactions involved and their economic importance to the affected countries.

Country risk exposure

Exposures to sovereign of industrialized European countries rated AA and below

The table "Largest five exposures to sovereign of industrialized European countries rated AA and below" shows our five largest gross exposures and the respective net amounts to the sovereign of those countries.

¹ Includes central governments, agencies and central banks. ² Traded products exposures are measured on a net replacement value basis. ³ Net of credit hedges.
Emerging market countries

Our net exposures to emerging market countries amounted to CHF 20.1 billion on 31 December 2010, compared with CHF 17.8 billion on 31 December 2009.

Based on the main country rating categories, 87% of our emerging market country exposures on 31 December 2010 were rated investment grade, compared with 82% on 31 December 2009. The table "Emerging markets net exposure by major geographical area and product type" shows the five largest emerging market country exposures in each major geographical area by product type on 31 December 2010 compared with 31 December 2009.

The overall credit and market risk exposure in the Middle East and the North African region was relatively modest. Of the CHF 2.6 billion shown for the entire region Middle East and Africa in the table below, CHF 2 billion relate specifically to Middle Eastern and North African countries, which includes the larger positions in Saudi Arabia and the United Arab Emirates. Our exposures in the countries that have been directly affected by political turmoil since the beginning of 2011 are immaterial.

1 Net of credit hedges. 2 As of 31.12.10 OTC derivatives exposures are measured on a net replacement value basis instead of the previously applied close-out period measurement. Exposures as of 31.12.09 show restated replacement value numbers (31.12.09 disclosed total exposure was CHF 22,418 million).
Debt investments

Debt investments classified according to IFRS as *Financial investments available-for-sale* are measured at fair value through equity, and can be broadly categorized as money market instruments and debt securities primarily held for statutory, regulatory or liquidity reasons. Debt investments may also include non-performing loans purchased in the secondary market by the Investment Bank.

The risk control framework applied to debt instruments classified as *Financial investments available-for-sale* depends on the nature of the instruments and the purpose for which we hold them. Our exposures may be included in market risk limits or be subject to specific monitoring such as interest rate sensitivity analysis, firm-wide earnings-at-risk, capital-at-risk and combined stress test metrics.

Composition of debt investments

Debt financial instruments classified as *Financial investments available-for-sale* decreased to CHF 73.4 billion on 31 December 2010 compared with CHF 80.4 billion on 31 December 2009. These instruments primarily comprised highly liquid short-term securities issued by governments and government-controlled institutions. This position includes our strategic investment portfolio, managed by Group Treasury.

➔ Refer to "Note 13 Financial investments available-for-sale" in the "Financial information" section of this report for more information
➔ Refer to the "Non-trading portfolios" section of this report for more information
➔ Refer to the "Treasury management" section of this report for more information on Group Treasury's risk management activities
Market risk

Market risk is the risk of loss resulting from changes in market variables. There are two broad categories of market variables: general market risk factors and specific components. General market risk factors include interest rates, equity index levels, exchange rates, commodity prices and general credit spreads. The volatility of these risk factors and the correlations between them are also general market risk factors. Specific components relate to the prices of debt and equity instruments, which result from factors and events particular to individual companies or entities.

Sources of market risk

We take general and specific market risks both in our trading activities and in some non-trading businesses.

Trading portfolios

Most of our market risk arises from our trading activities in the Investment Bank, including market-making, facilitation of client business and associated position taking in cash and derivative markets for equities, fixed income, interest rates, foreign exchange and commodities.

Our trading businesses are subject to multiple market risk limits. Traders are required to manage their risks within these limits, which may involve utilizing hedging and risk mitigation strategies. These strategies can expose the firm to additional risks as the hedge instrument and the position being hedged may not always move in parallel (often referred to as basis risk). We also actively manage such basis risks. Management and Risk Control may also give instructions to reduce the risk, even when limits are not exceeded.

Our asset management and wealth management businesses carry small trading positions, principally to support client activity. The market risk from these positions is not material to UBS as a whole.

Non-trading portfolios

Non-trading books may arise in any business division of the firm. Market risk exposures – primarily general interest rate and foreign exchange risks – may arise from non-trading activities such as retail banking and lending in our wealth management businesses, retail and corporate banking business in Switzerland, the Investment Bank’s lending businesses and our treasury activities, primarily from funding, balance sheet, liquidity and capital management needs. Equity and certain debt investments, including our strategic investment portfolio, can also give rise to specific market risks.

Non-trading foreign exchange risks are managed under market risk limits, with the exception of Group Treasury management of consolidated capital activity. Non-trading interest rate risk is either managed under market risk limits, or subject to specific monitoring and is reported in firm-wide EaR, CaR and CST metrics.

→ Refer to the “Non-trading portfolios” section of this report for more information

→ Refer to the “Treasury management” section of this report for more information on Group Treasury’s risk management activities

Market risk limits

We established a limit framework to control our market risks. We have two major portfolio measures of market risk: VaR and stress loss. Both are common to all our business divisions and subject to limits that are approved by the BoD.

In the Investment Bank, these portfolio measures are complemented by concentration and other supplementary limits on portfolios, asset classes and products, and also cover exposures to general market risk factors and single-name risk. Single-name risk (or issuer risk) is a measure of our exposure to the tradable instruments (debt, equity and derivatives) of a single issuer (or issuer group) were that issuer to be subject to a credit event including default. Our concentration and other supplementary limits take a variety of forms, including values (market or notional) and risk sensitivities, which are measures of exposure to a given risk factor such as interest rates, credit spreads, equity indices, foreign exchange rates or volatilities. These limits take into account the extent of market liquidity and volatility, available operational capacity, valuation uncertainty, and, for our single-name exposures, the credit quality of issuers.

Our exposures from security underwriting commitments are subject to the same concentration measures and controls as secondary market positions. Underwriting commitments are also generally reviewed by our Commitment Committee, which includes representatives from both business and control functions. Underwriting commitments are approved under delegated risk management and risk control authorities.

Market risk limits are set for each of the business divisions and Group Treasury. The limit framework in the Investment Bank is more detailed than in the other business divisions, reflecting the nature and magnitude of the risks it takes.

Trading portfolios

For the purposes of our disclosure, VaR is used to quantify market risk exposures in our trading portfolios.

Value-at-risk definition and limitations

As a statistical measure of market risk, VaR represents the market risk losses that potentially could be realized over a set time horizon at an established level of confidence. This assumes no change in our trading positions over the relevant time horizon. We use a
single VaR model for both internal management purposes and for
determining market risk regulatory capital requirements, although
the confidence levels and time horizons differ.

Our VaR model is approved by FINMA and ongoing significant
revisions of our VaR methodology and model are also subject to
regulatory approval.

The model uses historical data covering a five-year period and
is calibrated to a 1-day 95% measure for our internal manage-
ment purposes. However, in accordance with Basel II and FINMA
requirements, we use a 1-day 99% VaR for backtesting and a
10-day 99% VaR for determining market risk regulatory capital.
We calculate VaR on a daily basis on our end-of-day positions. Our
VaR calculation is based on the application of historical changes in
market risk factors directly to our current positions – a method
known as historical simulation.

Actual realized losses may differ from those implied by our VaR.
All VaR measures are subject to limitations and must be interpret-
ed accordingly. The limitations of VaR include the following:

- The five-year historical period used in creating our VaR mea-
sure will include fluctuations in market rates and prices that
differ from those that will occur in future periods. In particular,
the use of a five-year window means that sudden increases in
market volatility will not tend to increase VaR as quickly as the
use of shorter historical observation periods, but the impact of
the increase will impact our VaR for a longer period of time.

- The VaR measure is calibrated to a specified level of confidence
and may not indicate potential losses beyond this confidence
level.
- The 1-day time horizon in the VaR measure, or 10-day in the
case of regulatory VaR, may not fully capture the market risk of
positions that cannot be closed out or hedged within the spec-
ified period.
- In certain cases, VaR calculations approximate the impact of
changes in risk factors on the values of positions and portfolios. This may happen because the number of risk factors in-
cluded in the VaR model is necessarily limited; for example,
yield curve risk factors do not exist for all future dates.
- The effect of extreme market movements is subject to esti-
mation errors which may result from non-linear interaction
effects, as well as the potential for actual volatility and cor-
relation levels to differ from assumptions implicit in the VaR
calculations.

We continue to review the performance of our VaR implemen-
tation, including a review of risks not included in VaR. We will
continue to enhance our VaR model in order to more accurately
capture the relationships between the market risks associated
with our risk positions, as well as the revenue impact of large
market movements on particular trading positions.

1 As the minimum and maximum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification effect.
2 Includes all positions subject to internal management VaR limits.
Value-at-risk developments in 2010
The tables in this section show our 1-day 95% management VaR for the Group and the Investment Bank.

The Investment Bank’s average management VaR (1-day 95%) increased slightly to CHF 56 million in 2010 compared with CHF 55 million in 2009. Period-end VaR was higher at CHF 68 million on 31 December 2010 compared with CHF 54 million on 31 December 2009. This increase was a result of the execution of the growth plans in the Investment Bank as the market risk profile increased from previously low levels. Credit spread VaR remained the dominant component of the Investment Bank’s VaR. VaR for the Group followed a similar pattern as the Investment Bank’s VaR.

Backtesting
Backtesting compares 1-day 99% regulatory VaR calculated for positions at the close of each business day with the revenues which actually arise on those positions on the following business day. Our backtesting revenues exclude non-trading revenues, such as fees and commissions and estimated revenues from intraday trading. A backtesting exception occurs when backtesting revenues are negative and the absolute value of those revenues is greater than the previous day’s VaR.

We experienced one backtesting exception in 2010 compared with four backtesting exceptions in 2009. This exception was due to extreme market moves which followed the announcement of the European Central Bank’s financial aid package for certain European countries in May 2010.

The chart on the right-hand side shows the 12-month development of 1-day 99% VaR against backtesting revenues in the Investment Bank for the whole of 2010. The histogram on the right-hand side shows the Investment Bank’s full trading revenues distribution in 2010.

We investigate all backtesting exceptions and any exceptional revenues on the profit side of the VaR distribution. In addition, we report all backtesting results to senior business management, the Group Chief Risk Officer (Group CRO) and business division CROs.

Backtesting exceptions are also reported to internal and external auditors and to the relevant regulators.
Non-trading portfolios

For the purposes of our disclosure, the market risks associated with our non-trading portfolios are quantified using sensitivity analysis. This includes an aggregate measure of our exposures to interest rate risk in the banking book and specific sensitivity information for certain significant portfolios and positions that are not included in our management VaR.

Interest rate risk in the banking book

The banking book consists of Available-for-sale instruments, Loans and receivables, certain Instruments designated at fair value through profit or loss, derivatives measured at fair value through profit or loss and derivatives employed for cash flow hedge accounting purposes, as well as related funding transactions. These positions may impact other comprehensive income or profit or loss, due to differences in accounting treatment.

All interest rate risk is subject to independent risk control. When not included in our VaR measure, interest rate risk is subject to specific monitoring, which may include interest rate sensitivity analysis, EaR, CaR and CST metrics. Interest rate risk sensitivity figures are provided for the impact of a 1-basis-point parallel increase in yield curves on present values of future cash flows, irrespective of accounting treatment.

Our largest banking book interest rate risk exposures arise primarily from activities such as retail banking and lending in our Wealth Management & Swiss Bank division, as well as our treasury activities, which are mainly hedged.

The interest rate risks arising in the Wealth Management & Swiss Bank are transferred either by means of back-to-back transactions or, in the case of products with no contractual maturity date or direct market-linked rate, via "replicating" portfolios from the originating business into one of two centralized interest rate risk management units: Group Treasury or the Investment Bank’s fixed income, currencies and commodities (FICC) unit. These units manage the risks as part of their risk portfolios within their allocated market risk limits and controls, on an integrated basis, exploiting the netting potential across interest rate risks from different sources.

The Investment Bank’s portfolio of assets that were reclassified to Loans and receivables from Held-for-trading in the fourth quarter of 2008 and the first quarter of 2009, and certain other debt securities held as Loans and receivables, also give rise to non-trading interest rate risk.

Interest rate risk within Wealth Management Americas arises from the business division’s investment portfolio in addition to its lending and deposit products offered to clients.

Interest rate risk is closely measured, monitored and managed within approved risk limits and controls. Interest rate risk management incorporates the effects of natural risk offsets inherent within the balance sheet of Wealth Management Americas.

The interest sensitivity of non-contractual maturity products is modeled using historical behavior patterns from a complete interest rate cycle.

Group Treasury manages two main types of interest rate risk positions. One type is the risk transferred from Wealth Management & Swiss Bank’s banking operations (mentioned above). The other type arises from investing or funding non-monetary corporate balance sheet items that have indefinite lives such as equity and goodwill. For these items we have defined specific target durations based on which we fund and invest as applicable. These targets are defined by replication portfolios, which establish rolling benchmarks to execute against. The table below captures any residual risk in the Group Treasury books against these benchmarks. This activity and associated sensitivities of these replication portfolios are further discussed in the Group Treasury section.

In addition to its regular risk management activities, Group Treasury has been executing transactions that aim to economically hedge negative effects on the firm’s net interest income stemming from the extraordinarily low yield environment. These positions are the cause of the significant increase of our interest rate risk in the banking book compared to 2009.

➔ Refer to “Group Treasury” section for more information on investment of equity

The impact of an adverse parallel shift in interest rates of 200 basis points on our banking book interest rate risk exposures is significantly below the threshold of 20% of eligible regulatory capital specified by regulators. This is designed to identify banks that may be required to hold additional regulatory capital against this risk.

Interest rate sensitivity of available-for-sale bond investments

In addition to the above economic risk view which also considers off-setting positions, we provide below the accounting view of

### Impact of a 1-basis-point parallel increase in yield curves on present value of future cash flows

1 Does not include interest rate sensitivities in respect of our inventory of student loan ARS or our commitment to purchase client holdings of student loan ARS. From an economic perspective these exposures are not materially affected by parallel shifts in USD interest rates, holding other factors constant.
Interest rate sensitivity of interest rate swaps designated in cash flow hedges

To the extent effective, interest rate swaps designated in cash flow hedges are accounted for at fair value through equity under IFRS. Amounts deferred in equity are released to the income statement according to the occurrence of the underlying hedged interest cash flows. Interest rate swaps designated in cash flow hedges are denominated in USD, EUR, GBP, CHF and CAD. At 31 December 2010, fair values of interest rate swaps amounted to CHF 5.4 billion (positive replacement values) and CHF 3.4 billion (negative replacement values). The impact on other comprehensive income under IFRS of a 1-basis-point increase of underlying LIBOR curves would have decreased equity by approximately CHF 21 million. This estimation excludes economic off-setting positions and is included in the above table on interest rate-sensitivities in the banking book, together with partially offsetting hedge and funding effects.

Non-trading portfolios – valuation and sensitivity information by instrument category

This section includes a description of the valuation of certain significant product categories and related valuation techniques and models. In addition, sensitivity information is provided for certain significant instrument categories that are excluded from management VaR as disclosed in the “Risk and treasury management” section of this report.

Credit valuation adjustments on monoline credit protection

UBS previously entered into negative basis trades with monolines, whereby they provided CDS protection against UBS-held underlyings, including residential and commercial mortgage-backed securities collateralized debt obligations (RMBS and CMBS CDO), transactions with CLO, and asset-backed securities collateralized debt obligations (ABS CDO). Since the start of the financial crisis, the CVA relating to these monoline exposures have been a source of valuation uncertainty, given market illiquidity and the contractual terms of these exposures relative to other monoline-related instruments.

CVA amounts related to monoline credit protection are based on a methodology that uses CDS spreads on the monolines as a key input in determining an implied level of expected loss. Where a monoline has no observable CDS spread, a judgment is made on the most comparable monoline or combination of monolines, and the corresponding spreads are used instead. For RMBS CDO, CMBS CDO, and CLO asset categories, cash flow projections are used in conjunction with current fair values of the underlying assets to provide estimates of expected future exposure levels. For other asset categories, future exposure is derived from current exposure levels.

To assess the sensitivity of the monoline CVA calculation to alternative assumptions, the impact of a 10% increase in monoline CDS spreads (e.g. from 1,000 basis points to 1,100 basis points for a specific monoline) was examined. On 31 December 2010, such an increase would have resulted in an increase in the monoline credit valuation adjustment of approximately USD 45 million (CHF 42 million) compared with USD 77 million or CHF 80 million on 31 December 2009.

The sensitivity of the monoline CVA to a decrease of one percentage point in the monoline recovery rate assumptions (e.g. from 35% to 34% for a specific monoline, conditional on default occurring) is estimated to result in an increase of approximately USD 9 million (CHF 8 million) in the CVA, compared with USD 26 million or CHF 27 million on 31 December 2009. The sensitivity to credit spreads and recovery rates is substantially linear.

US reference-linked notes

The US reference-linked notes (RLN) consist of a series of transactions whereby UBS purchased credit protection, predominantly in note form, on a notional portfolio of fixed income assets. The referenced assets are comprised of USD asset-backed securities (ABS). These are primarily commercial mortgage-backed securities and subprime residential mortgage-backed securities and/or corporate bonds and loans across all rating categories. While the assets in the portfolio are marked-to-market, the credit protection embodied in the RLN is fairly valued using a market standard approach to the valuation of portfolio credit protection (Gaussian copula). This approach is intended to effectively simulate correlated defaults within the portfolio, where the expected losses and defaults of the individual assets are closely linked to the observed market prices (spread levels) of those assets. Key assumptions of the model include correlations and recovery rates. UBS applies fair value adjustments related to potential uncertainty in each of these...

Financial investments available-for-sale

Refer to “Debt investments” in the “Credit risk” section of this report for more information.
parameters, which are only partly observable. In addition, UBS applies fair value adjustments for uncertainties associated with the use of observed spread levels as the primary inputs. These fair value adjustments are calculated by applying shocks to the relevant parameters and revaluing the credit protection. These shocks for correlation, recovery and spreads are set to various levels depending on the asset type and/or region and may vary over time depending on the best judgment of the relevant trading and control personnel. Correlation and recovery shocks are generally in the reasonably possible range of 5 to 15 percentage points. Spread shocks vary more widely and depend on whether the underlying protection is funded or unfunded to reflect cash or synthetic basis effects.

On 31 December 2010, the fair value of the US RLN credit protection was approximately USD 629 million (CHF 588 million) compared with USD 1,431 million (CHF 1,481 million) on 31 December 2009. This fair value includes fair value adjustments which were calculated by applying the shocks described above of approximately USD 31 million (CHF 29 million). This compares with USD 71 million (CHF 74 million) on 31 December 2009. The fair value adjustments may also be considered a measurement of sensitivity.

Non-US reference-linked notes
The same valuation model and approach to the calculation of fair value adjustments are applied to the non-US RLN credit protection and the US RLN credit protection as described above, except that the spread is shocked by 10% for European corporate names.

On 31 December 2010, the fair value of the non-US RLN credit protection was approximately USD 660 million (CHF 616 million) compared with USD 1,050 million (CHF 1,087 million) on 31 December 2009. This fair value includes fair value adjustments which were calculated by applying the shocks described above of approximately USD 72 million (CHF 67 million) compared with USD 105 million (CHF 109 million) on 31 December 2009. This adjustment may also be considered a measurement of sensitivity.

Option to acquire equity of the SNB StabFund
UBS’s option to purchase the SNB StabFund’s equity is recognized on the balance sheet as a derivative at fair value (positive replacement values) with changes to fair value recognized in profit or loss. On 31 December 2010, the fair value (after adjustments) of the call option held by UBS was approximately USD 1,906 million (CHF 1,781 million) compared with USD 1,174 million (CHF 1,216 million) on 31 December 2009.

The model incorporates cash flow projections for all assets within the fund across various scenarios. It is calibrated to market levels by setting the spread above the one-month Libor rates used to discount future cash flows such that the model-generated price of the underlying asset pool equals UBS’s assessed fair value of the asset pool. The model incorporates a model reserve (fair value adjustment) to address potential uncertainty in this calibration. On 31 December 2010, this adjustment was USD 250 million (CHF 234 million) compared with USD 262 million (CHF 271 million) on 31 December 2009.

On 31 December 2010, a 100-basis-point increase in the discount rate would have decreased the option value by approximately USD 167 million (CHF 156 million), and a 100-basis-point decrease would have increased the option value by approximately USD 188 million (CHF 176 million).

Stress loss
To complement VaR and other measures of market risk, we also run macro stress scenarios, combining various market moves to reflect the most common types of potential stress events, as well as more targeted stress tests for our concentrated exposures and vulnerable portfolios. Targeted stress tests are typically applied to specific asset classes or to specific markets and products. We continued to enhance our market risk stress framework in 2010, in order to increase the scope and granularity of the analysis. Our scenarios capture the liquidity characteristics of different markets, asset classes and positions.

Our market risk stress testing framework is designed to provide a control framework that is forward-looking and responsive to changing market conditions. Our stress scenarios are therefore reviewed regularly in the context of the macroeconomic and geopolitical environment by a committee comprised of representatives from the business divisions, Risk Control and Economic Research. In response to changing market conditions and new developments around the world, we develop and run ad hoc stress scenarios to assess the potential impact on our portfolio.

→ Refer to the discussion on stress loss in this section for more information

Equity investments
Under IFRS, equity investments not in the trading book may be classified as Financial investments available-for-sale, Financial assets designated at fair value through profit or loss or Investments in associates.

We make investments for a variety of purposes, including revenue generation or as part of strategic initiatives. Other investments, such as exchange and clearing house memberships, are held to support our business activities. We may also make investments in funds that we manage, in order to fund or “seed” them at inception, or to demonstrate alignment of our interests with those of
We also buy, and are sometimes required by agreement to buy, securities and units from funds that we have sold to clients. These may include purchases of illiquid assets such as interests in hedge funds.

We can make direct investments in a variety of entities or buy equity holdings in both listed and unlisted companies, if such investments are illiquid. The fair value of equity investments tends to be dominated by factors specific to the individual stocks, and our equity investments are generally intended to be held for the medium or long term and may be subject to lock-up agreements. For these reasons, we generally do not control these exposures using the market risk measures applied to trading activities. Such equity investments are, however, subject to risk controls, including pre-approval of new investments by business management and Risk Control and regular monitoring and reporting. They are also included in our firm-wide EaR, CaR and CST metrics.

Investments made as part of an ongoing business are also subject to our standard controls, including portfolio and concentration limits. Seed money and co-investments in UBS-managed funds made by Global Asset Management are, for example, subject to a portfolio limit. All investments must be approved by delegated authorities and are monitored and reported to senior management.

Composition of equity investments

On 31 December 2010, we held equity investments totaling CHF 3.0 billion, of which CHF 1.4 billion were classified as Financial investments available-for-sale, CHF 0.9 billion as Financial assets designated at fair value and CHF 0.8 billion as Investments in associates.

As of 31 December 2009, we held equity investments totaling CHF 3.1 billion, of which CHF 1.4 billion were classified as Financial investments available-for-sale, CHF 0.8 billion as Financial assets designated at fair value and CHF 0.9 billion as Investments in associates.

The vast majority of the CHF 0.9 billion of Financial assets designated at fair value represented the assets of trust entities associated with employee compensation schemes. They are broadly offset by liabilities to plan participants included in Other liabilities. The equivalent positions on 31 December 2009 amounted to CHF 0.8 billion.

➔ Refer to “Note 13 Financial investments available-for-sale” in the “Financial information” section of this report for further information

➔ Refer to “Note 14 Investments in associates” in the “Financial information” section of this report for further information
Operational risk

Operational risk is the risk resulting from inadequate or failed internal processes, human error and systems failure, or from external causes (deliberate, accidental or natural). Events may be manifested as direct financial losses or indirectly in the form of revenue forgone as a result of business suspension. They may also result in damage to our reputation and to our franchise causing longer term financial consequences. Managing risk is a core element of our business activities, and operational risk is an inevitable consequence of being in business. Our aim is not to eliminate every source of operational risk, but to provide a framework that supports the identification and assessment of all material operational risks and their potential concentrations in order to achieve an appropriate balance between risk and return.

Management and risk committees are the governing bodies responsible for oversight and active discussion of risk management activities, including the question of whether or not the cost of mitigating actions is adequately balanced against the acceptable level of operational risk. Management, in all functions, is responsible for establishing an appropriate operational risk management environment, including the establishment and maintenance of robust internal controls and a strong risk culture.

The Group Head of Operational Risk Control (ORC) is responsible for the operational risk framework (ORF) and monitors its implementation in the business divisions and the Corporate Center. The Group Head of ORC reports to the Group Risk Chief Operating Officer, who is a member of the Risk Executive Committee, and chairs the ORC Management Committee, composed of the Heads of Operational Risk Control from each business division including the Corporate Center. The ORC Management Committee is the main decision-making committee for all operational risk framework matters.

Operational risk framework

The operational risk framework sets general requirements for managing and controlling operational risk, including implementation by divisional and functional management. The framework requires that all material operational risks be identified, appropriately measured, monitored, controlled and reported.

A comprehensive operational risk classification taxonomy exists, which defines all operational risks arising from business activities. It enables a common understanding, and provides a standard and consistent categorization of operational risks across all business divisions and the Corporate Center. The operational risk taxonomy forms the backbone of operational risk assessment and reporting. Critically, it provides a transparent link to the health of the internal control environment. Relevant operational risk indicator data, for example internal and external loss events, are assigned to taxonomy categories, which are:

- theft, fraud and unauthorized activity
- employment-related risks
- business practices
- operating and legal entity governance
- client selection and monitoring
- investment suitability, maintenance and servicing
- data confidentiality and protection
- product risks and business due diligence
- transaction processing and operational reliability
- technology risks
- vendors and offshoring
- valuation and reporting
- primary risk management and control

As a consequence of the legal and regulatory environment we operate in, many of the above categories include significant litigation and regulatory exposures.

The operational risk appetite applied to our business activities is expressed through the establishment of quantitative constraints, such as operating limits and an internal control environment with associated performance thresholds, and/or qualitative constraints such as standards and requirements as set by policy.

Senior management is required to maintain a robust and comprehensive set of internal controls, and must continuously assess both their design and operational adequacy. The operational risk framework assesses both the aggregated impact of recorded deficiencies on the firm’s operational risk profile and the adequacy
of remediation efforts undertaken. Senior management considers whether the current level of operational risk is acceptable, and, if not, must adapt their business activities or adjust the internal control environment accordingly.

Material operational risks and significant internal control deficiencies are identified and reported at least quarterly to stakeholders, including the BoD, GEB, divisional/regional/local management, Group Internal Audit, external auditors and regulators.

**Operational risk measurement**

We have developed a model for the quantification of our operational risk, which meets the regulatory capital standard specified by the Basel II advanced measurement approach (AMA). Our model has two main components. The expected loss component is a statistical measure based on our own historical loss experiences (collected since 2002), and is used primarily to determine the expected loss portion of our capital requirement. The unexpected loss component is based on a set of generic scenarios representing categories of operational risks that are relevant to the firm. The scenarios are reviewed extensively on an annual basis by internal experts, using internal and external event information, information about the prevailing business environment and our own internal control environment. This component is used to determine the unexpected loss portion of our capital requirement.

The ORC owns and manages the AMA process that determines operational risk regulatory capital and the allocation of capital to the business divisions and the Corporate Center.

We calculate our operational risk regulatory capital requirement using the AMA model for the consolidated Group and the parent bank in accordance with FINMA requirements. For regulated subsidiaries, the basic indicator or standardized approaches are adopted as agreed with local regulators.

Currently, we do not reflect mitigation through insurance or any other risk transfer mechanism in our AMA model.

→ Refer to the “Capital management” section of this report for more information on the development of RWA for operational risk
Risk concentrations

A risk concentration exists where: (i) a position in financial instruments is affected by changes in a group of correlated factors, or a group of positions are affected by changes in the same risk factor or a group of correlated factors; and (ii) the exposure could, in the event of large but plausible adverse developments, result in significant losses.

The identification of risk concentrations requires judgment, as potential future developments cannot be predicted and may vary from period to period. In determining whether we have a risk concentration, we consider a number of elements, both individually and collectively. These elements include: the shared characteristics of the instruments and counterparties; the size of the position or group of positions; the sensitivity of the position or group of positions to changes in risk factors; and the volatility and correlations of those factors. Also important in our assessment is the liquidity of the markets where the instruments are traded, and the availability and effectiveness of hedges or other potential risk mitigating factors. The value of a hedge instrument may not always move in line with the position being hedged, and this mismatch is referred to as basis risk.

If we identify a risk concentration, we assess it to determine whether it should be reduced or mitigated, and we also evaluate the available means to do so. Our identified risk concentrations are subject to increased monitoring.

Identified risk concentrations

Based on our assessment of our portfolios and asset classes with potential for material loss in a stress scenario relevant to the current environment, we believe that our exposures to monoline insurers and student loan auction rate securities shown below can be considered as risk concentrations as of 31 December 2010, in accordance with the abovementioned definition.

It is possible that material losses could occur on asset classes, positions and hedges other than those disclosed in this section of the report, particularly if the correlations that emerge in a stressed environment differ markedly from those we anticipated. We are exposed to price risk, basis risk, credit spread risk and default risk as well as other idiosyncratic and correlation risks on both our equities and fixed income inventories. We also have price risk on our option to acquire the SNB StabFund’s equity.

In addition, we have lending, counterparty and country risk exposures that could result in significant losses if economic conditions were to worsen.

➔ Refer to the discussion on credit risk, market risk and operational risk above for more information on the risks to which we are exposed

Exposure to monoline insurers

The vast majority of our direct exposures to monoline insurers arise from OTC derivative transactions, mainly CDS purchased to hedge specific positions. The “Exposure to monoline insurers by rating” table shows the CDS protection purchased from monoline insurers to hedge specific positions. It illustrates the notional amounts of the protection held, the fair value of the underlying instruments and the fair value of the CDS both prior to and after the CVA taken on these contracts. As a result of trade commutations, and because a significant portion of the underlying assets are classified as Loans and receivables for accounting purposes, the change in CVA reported in the table does not equal the profit or loss associated with this portfolio during the year ended 31 December 2010.

Exposure under CDS contracts with monoline insurers is calculated as the sum of the fair values of individual CDS after CVA. Changes in CVA result from changes in CDS fair value. This, in turn, arises from changes in the fair value of the instruments against which protection has been purchased, and also from movements in monoline credit spreads.

UBS actively reduced exposures to monoline insurers in 2010 by commuting trades. The trade commutations related primarily to US RMBS CDO that we had substantially written down on a fair value basis. Combined with the improved performance and composition of the portfolio, the fair values of our remaining assets hedged with monoline insurers increased over the period, with a corresponding decrease in the fair values of the related CDS. On 31 December 2010, based on fair values, approximately 73% of the remaining assets were collateralized loan obligations (CLO), 25% were collateralized CMBS and other asset-backed securities, and only 2% related to US RMBS CDO. The vast majority of the CLO positions were rated AA and above.

On 31 December 2010, the total fair value of CDS protection purchased from monoline insurers decreased to USD 1.6 billion (USD 2.3 billion on 31 December 2009) after cumulative CVA of USD 1.1 billion (USD 2.8 billion on 31 December 2009). These exposures do not take into account any hedging benefits.

In addition to credit protection purchased on the positions detailed in the table, on 31 December 2010 UBS held direct derivative exposure to monoline insurers of USD 240 million after CVA of USD 143 million.

➔ Refer to the discussion on credit valuation adjustments on monoline credit protection in this section of the report for more information on CVA valuation and sensitivities

### Exposure to student loan auction rate securities

Approximately USD 8.6 billion at par value of student loan ARS were redeemed by issuers, or sold by us in the secondary market, in 2010.

We have committed to restore liquidity to certain client holdings of ARS. This commitment is in line with previously announced agreements in principle with various US state agencies, as well as the final settlements entered into with the Massachusetts Securities Division, the US Securities and Exchange Commission and the New York State Attorney General. We repurchased USD 7.6 billion at par value of student loan ARS in 2010, including approximately USD 4 billion of student loan ARS where we accelerated the repurchase from our clients in order to facilitate redemptions with issuers or resales. Combined with other redemptions directly with clients and amortizations, this resulted in an overall decrease of USD 7,754 million in the maximum repurchase amount at par of student loan ARS required by the regulatory settlements (as shown in the table "Client holdings: student loan ARS") compared with a reduction of USD 3,958 million in 2009. On 31 December 2010, our outstanding repurchase commitment was USD 63 million. This concerns institutional client holdings of student loan ARS, and the relevant buy-back window will close on 2 July 2012.

Our inventory of student loan ARS decreased by USD 563 million to USD 9,784 million as of 31 December 2010 as a result of the abovementioned redemptions, resales and amortizations. These were largely offset by student loan ARS repurchased in the period. On 31 December 2010, approximately 77% of the collateral underlying our inventory of student loan ARS was backed by Federal Family Education Loan Program (FFELP), which was reinsured by the US Department of Education for not less than 97% of principal and interest. All of our student loan ARS positions are held as Loans and receivables and are subject to an impairment test that includes a detailed review of the quality of the underlying collateral. Impairment charges incurred on our inventory of student loan ARS in 2010 were USD 145 million (CHF 148 million). Approximately 62% of the USD 63 million student loan ARS that we committed to purchase from clients were backed by FFELP guaranteed collateral.

Risk and treasury management

Treasury management

Group Treasury oversees the balance sheet and the usage of our critical financial resources including capital, liquidity and funding. Treasury manages key portions of these resources including the interest rate and currency risks arising from balance sheet and capital management activities.

**Liquidity management**

In 2010, we continued to maintain a sound liquidity position and a diversified portfolio of funding sources, despite the potential uncertain impact of developments in financial regulatory reforms and the significant market volatility caused by uncertainties regarding the global macroeconomic environment, including certain European fiscal and sovereign debt concerns.

**Funding management**

Over the course of 2010, as investors became gradually more risk tolerant, credit spreads and incremental funding costs for most global financial institutions, including UBS, generally narrowed throughout the yield curve. We raised over CHF 15 billion equivalent of public benchmark bonds with an average maturity of 5.5 years. This exceeded the combined amount of public benchmark bonds and other long-term straight debt which matured, or was redeemed, during 2010. Adjusting for currency effects, our customer cash deposits in our wealth and asset management business divisions at year-end 2010 were stable compared with year-end 2009.

**Interest rate and currency management**

The interest rate risk management responsibility for Wealth Management & Swiss Bank transactions executed in Switzerland was transferred to Group Treasury. The interest rate risk arising from this is managed by Group Treasury to optimize risk capture, management and netting potential. In response to the prolonged low yields, treasury supported and implemented measures to improve Wealth Management & Swiss Bank’s margin income through income-generating fixed receiver swap and bond portfolios. Group Treasury continued to earn interest income on equity through its portfolio of interest rate products and managed the currency effects on equity and key ratios. Profits and losses in foreign currencies were hedged to protect shareholder value.

**Capital ratios, risk-weighted assets and eligible capital**

On 31 December 2010, our BIS tier 1 ratio was 17.8% and the total capital ratio was 20.4%, up from 15.4% and 19.8%, respectively, on 31 December 2009. BIS risk-weighted assets declined from CHF 206.5 billion at the end of December 2009 to CHF 198.9 billion at the end of December 2010, while eligible tier 1 capital increased from CHF 31.8 billion to CHF 35.3 billion over the same period.

**Equity attribution**

Group Treasury uses our equity attribution framework to guide our businesses in the allocation of resources to opportunities that are expected to provide the best risk-adjusted profitability contributions.

**Shares**

As of 31 December 2010, we had a total of 3,830,840,513 shares issued. In 2010, the issued shares were increased by a total of 272,727,760 shares. This was mainly due to our capital raising as CHF 13 billion in convertible notes (MCN) issued in 2008 expired on 5 March 2010. The notes were mandatorily converted into 272,651,005 newly issued shares, which represented 7.7% of our issued share capital at the time. Additionally there were a small number of exercises of conditional capital due to exercises of employee options (76,755 shares).

**Financial resource governance**

Our Group Asset and Liability Management Committee (Group ALCO) promotes the usage of our assets and liabilities in line with our overall UBS Group (Group) strategy as defined by the Board of Directors (BoD) and the Group Executive Board (GEB), our regulatory commitments and the interests of our shareholders and other stakeholders. The Group ALCO manages the balance sheet of the business divisions through allocation and monitoring of targets. In addition, the Group ALCO manages our liquidity, funding and capital by taking into account their business performance, overall risk profile as well as market conditions.

Group Treasury provides Group ALCO with monthly reporting of our financial resources (e.g. balance sheet, capital, liquidity and funding) in order for them to oversee and monitor our asset and liability management policies and processes to ensure their effectiveness under prevailing and prospective conditions.
Liquidity and funding management

We define liquidity risk as the risk of being unable to generate sufficient funds from assets to meet payment obligations when they fall due. Funding risk is the risk of being unable, on an ongoing basis, to borrow funds in the market at an acceptable price to fund actual or proposed commitments and thereby support our current business and desired strategy. Liquidity and funding are not the same, but they are closely related and both are critical for a financial institution.

Liquidity and funding must be continuously managed to ensure that we can successfully adjust to sudden adverse changes in market conditions or our operating environment, whether such changes consist of a general market crisis, a localized difficulty affecting a smaller number of institutions, or a problem unique to an individual firm. An institution that is unable to meet its liabilities when they fall due may fail, even though it is not insolvent, because it is unable to borrow sufficient funds on an unsecured basis, or does not have sufficient high quality assets to borrow against or liquid assets to sell to raise immediate cash.

Market liquidity overview: 2010

Relative to the latter part of 2009, the beginning of 2010 was characterized by much more favorable market conditions, with a surge in public long-term debt issuance by financial institutions. However, markets subsequently became more volatile and issuance conditions deteriorated into and during the second quarter as increasing concerns regarding sovereign debt in several European countries led to heightened risk aversion and fears of contagion, driving up banks’ credit risk premia and funding spreads. Risk aversion persisted into the early summer amid concerns about the global economy, the pending release of the EU banks’ stress test results, the debate on central bank support and the uncertain impact of global financial regulatory reform. Market liquidity and funding conditions for banks began to improve again following the release of the EU banks’ stress test results in July, and continued to remain relatively favorable throughout the third quarter and into the early part of the fourth quarter, albeit with reduced activity in debt issuance. Certain financial institutions’ funding spreads widened noticeably late in the year due to renewed European sovereign credit concerns and uncertainty around the potential success of continued quantitative easing efforts by major central banks.

We saw continued signs of stabilization during 2010, with overall quarterly net new money inflows in the second half of the year, while customer cash deposits in our wealth and asset management business divisions at year-end 2010 were stable compared with the prior year-end when adjusted for currency effects. This is a notable change from the declines in customer cash deposits and net new money outflows that these businesses experienced in 2009.

Continuing implementation of the liquidity and funding risk management framework

Following the approval of our funding model by the Group ALCO, a new internal funds transfer pricing curve has been implemented. We further developed the architecture of the strategic models that focus on the stressed liquidity and the operational cash ladders that are used to monitor the liquidity profile of the firm. In 2011 we will begin regional implementation of the new funding model.

Risk and treasury management

Our approach to liquidity management, which covers all UBS branches and subsidiaries, aims to ensure that we will always have sufficient liquidity to meet liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risking sustained damage to our various businesses.

Central to the integrated framework is an assessment and regular testing of all material, known and expected cash flows and the level of high-grade collateral that could be used to raise additional funding. This involves monitoring the balance sheet contractual and behavioral maturity profiles and projecting and modeling the liquidity exposures of the firm under a variety of potential scenarios – encompassing both normal and stressed market conditions. Limits are set at Group and business division level by the BoD, the Group ALCO, the Group Chief Financial Officer (Group CFO) and the Group Treasurer. These limits are monitored by Group Treasury, which reports the results and trends on a regular basis to the BoD Risk Committee and the Group ALCO.

Our major sources of liquidity are channeled through entities that are fully consolidated. The liquidity position and asset and liability profile are continuously tracked. We consider the possibility that our access to markets could be impacted by a stress event affecting some, or all, parts of our business. The results are factored into our overall contingency plans. Contingency plans for a liquidity crisis are then incorporated into our wider crisis management process.

Liquidity management

We manage our liquidity position in order to be able to survive a UBS-specific liquidity crisis combined with a generally stressed market environment. This is complemented by our funding risk management, which aims to achieve the optimal liability structure to finance our businesses reliably and cost-efficiently.
Our business activities generate asset and liability portfolios that are intrinsically highly diversified with respect to market, product and currency. This reduces our exposure to individual funding sources, and also provides a broad range of investment opportunities, which in turn reduces liquidity risk.

Our funding diversification and global scope help protect our liquidity position in the event of a crisis. The liquidity and funding process is undertaken jointly by Group Treasury and the foreign exchange and money market (FXMM) unit within the Investment Bank’s fixed income, currencies and commodities (FICC) business area. Group Treasury establishes a control framework, while FICC undertakes operational cash and collateral management within the established limits.

This permits close control of both our global cash position and our stock of high-quality liquid securities. Our treasury processes also ensure that the firm’s general access to wholesale cash markets is concentrated in FICC. Funds raised externally are largely channeled into FICC, including the proceeds of debt securities issued by UBS, an activity for which Group Treasury is responsible. FICC in turn meets internal demands for funding by channeling funds from units generating surplus cash to those in need of financing.

Liquidity modeling, controls and contingency planning

For the purpose of monitoring our liquidity situation, we employ the following main measures:

- A cash ladder which is used to manage our funding requirements on a daily basis within limits that are set by the Group ALCO, the Group CFO and the Group Treasurer. This cumulative cash ladder shows the daily liquidity position – the net cumulative funding requirement for a specific day – projected for each business day from the current day forward three months.

- A stressed version of the cash ladder which is overlaid with behavioral assumptions that model a severe UBS-specific liquidity crisis combined with a generally stressed market environment. This stress scenario is run daily and used to project potential outflows over a one-month time horizon.

- A contractual maturity gap analysis of our assets and liabilities over a one-year time horizon.

- A behavioral maturity gap analysis under an assumed UBS-specific liquidity crisis combined with a generally stressed market environment over a one-year time horizon.

- A cash capital model which measures the amount of stable funding in relation to the amount and composition of our assets.

All of these tools and models are reviewed and enhanced regularly to ensure that latest business developments are incorporated. The breakdown of the contractual maturities of our assets and liabilities serves as a starting point for stress testing analyses. This contractual view does not fully represent a liquidity risk management perspective, and is thus adjusted to include behavioral components and a more detailed breakdown of asset and liability types.

The liquidity crisis scenario combines a firm-specific crisis with market disruption and focuses on a time horizon extending up to one year. This UBS-specific scenario envisages large drawdowns on otherwise stable client deposits which are predominantly due contractually on demand, an inability to renew or replace maturing unsecured wholesale funding and the reduced capacity to generate liquidity from trading assets. Liquidity crisis scenario analysis and contingency planning supports the liquidity management process so that immediate corrective measures, such as the use of a liquidity buffer to absorb potential sudden liquidity shortfalls, can be put into effect.

Since a liquidity crisis could have a myriad of causes, we focus on a scenario that encompasses potential stress effects across all markets, currencies and products.

The assessment includes the likelihood of maturing assets and liabilities being rolled over in a UBS-specific crisis within an otherwise stressed market environment, and gauges the extent to which the potential crisis-induced shortfall could be covered by available funding. This would be raised on a secured basis against available collateral, which includes securities eligible for pledging at the major central banks, or by selling inventory. In both cases we apply crisis-level discounts to the value of assets. We assume that we would generally be unable to renew any of our wholesale unsecured debt, including all our maturing money market paper (CHF 56 billion outstanding on 31 December 2010). Since liquidity needs may also result from commitments and contingencies, including credit lines extended to secure the liquidity needs of clients, we regularly monitor undrawn committed credit facilities and other latent liquidity risks and factor these into the scenario analysis. Particular emphasis is placed on potential drawdowns of committed credit lines.

If our credit ratings were to be downgraded, “rating trigger” clauses, especially in derivative transactions, could result in an immediate cash outflow due to the unwinding of derivative positions or the need to deliver additional collateral. Based on our credit ratings as of 31 December 2010, additional collateral or termination payments pursuant to agreements with certain counterparties of approximately CHF 0.7 billion and CHF 1.9 billion would have been required in the event of a one-notch and two-notch reduction, respectively, in our long-term credit ratings. At year-end 2010 our long-term senior debt ratings were as follows: Moody’s Aa3 (outlook: negative); Standard and Poor’s A+ (outlook: stable); and Fitch Ratings A+ (outlook: stable).

We also take into account the potential impact on our net liquidity position of adverse movements in the replacement value of our over-the-counter (OTC) derivative transactions, which are subject to collateral arrangements. Given the diversity of our derivatives business and that of our counterparties, there is not necessarily a direct correlation between the factors influencing net replacement values with each counterparty and a UBS-specific crisis scenario.

→ Refer to “Note 23 Derivative instruments and hedge accounting” in the “Financial information” section of this report for more information
**Liquidity limits and controls**

Liquidity and funding limits and targets are set by the BoD, the Group ALCO, the Group CFO and the Group Treasurer, taking into consideration our business model and strategy, the prevailing market conditions and our tolerance for risk. The principles underlying our limit and target framework aim to maximize and sustain the value of our business franchise and maintain an appropriate balance in the asset/liability structure. Structural limits and targets focus on the structure and composition of the balance sheet, while supplementary limits and targets are designed to drive the utilization and allocation of funding resources. Together the limits and targets focus on structural liquidity risk for periods out to one year, including stress testing, and on the liability mix, including diversification by source, counterparty, currency and tenor. Group Treasury is responsible for the oversight of the liquidity and funding limits and targets. Performance versus limits and targets is monitored and regularly communicated to senior management. On an annual basis these limits and targets are reviewed and reconfirmed by the respective authorities.

To complement and support the limit framework, Group Treasury and members of our regional and divisional treasuries monitor the markets in which we operate for potential threats.

We have contingency plans for liquidity crisis management, a cornerstone of which are our substantial liquidity reserves, including a large multi-currency portfolio of unencumbered high-quality short-term assets and available and unutilized liquidity facilities at several major central banks.

The liquidity contingency plan is an integral part of the global crisis management concept, which covers all types of crisis events. Its implementation falls under the responsibility of a special crisis team with representatives from Group Treasury, FICC and related areas, including the functions responsible for payments and settlements, market and credit risk control, collateral and margin management, and information technology and infrastructure. Our global management model lends itself naturally to efficient liquidity crisis management. Should a crisis require contingency funding measures to be invoked, Group Treasury is responsible for coordinating liquidity generation with representatives from FICC and the relevant business areas.

**New Swiss regulatory liquidity regime**

During 2010, the Swiss Financial Market Supervisory Authority (FINMA) and the Swiss National Bank (SNB) introduced a revised liquidity regime for big banks which came into effect on 30 June 2010, designed to ensure stability within the Swiss financial industry. The new regime is broadly consistent with international proposals for liquidity regulations, particularly the principles written by the Basel Committee for Banking Supervision. The core element of the new liquidity regime is a severe stress scenario that combines a general financial market crisis with creditors’ loss of trust in the bank. The new liquidity regulations require the banks to hold liquid assets sufficient to offset the projected outflows under the stress scenario for a period of 30 days. Our established internal liquidity stress tests consider a stress scenario similar in nature to that used by the new FINMA liquidity regime. We believe this will enable us to sustain our business for a period substantially beyond the minimum regulatory horizon.

Funding

Our wealth management businesses represent valuable and cost-efficient sources of funding. At year-end 2010, these businesses contributed CHF 304 billion, or 92%, of the CHF 332 billion total customer deposits shown in the “UBS asset funding” graph. Compared with the CHF 263 billion of net loans as of 31 December 2010, customer deposits provided 126% coverage compared with an adjusted 127% on 31 December 2009. In the fourth quarter of 2010, we changed the presentation of cash collateral from derivative transactions and prime brokerage receivables and payables. These positions are no longer included in customer and interbank deposits, but are now shown as part of “other liabilities” in the “UBS asset funding” graph.

In terms of secured funding (i.e. repurchase agreements and securities lent against cash collateral received), we borrowed less cash on a collateralized basis than we lent, leading to a surplus of net securities sourced – shown as the CHF 124 billion cash-equivalent surplus in the “UBS asset funding” graph.

Funding is also provided through numerous short-, medium- and long-term funding programs, which offer customized investment opportunities to institutional and private clients. These programs can efficiently raise funds globally, further reducing our dependence on any particular source.

Through broad diversification of our funding sources by market, product and currency, we maintain a well-balanced portfolio of liabilities, which provide protection in the event of market disruptions. This enables us to efficiently fund our business activities.

Funding approach

Funding activities are planned by assessing the overall liquidity and funding profile of the balance sheet, taking account of stable funding needed to support ongoing business activities through periods of difficult market conditions.

During 2010, we raised over CHF 15 billion equivalent of public benchmark bonds with an average maturity of 5.5 years, including nearly CHF 3 billion equivalent of covered bond issuance. The amount of public bond issuance exceeded the CHF 11 billion equivalent of long-term straight debt (CHF 6 billion of which was from public benchmark bonds) that matured during 2010, plus CHF 3 billion equivalent of subordinated and hybrid tier 1 debt that was redeemed during 2010. Additionally, we continued to raise medium- and long-term funds through medium-term notes and private placements throughout the year.

To ensure that a well-balanced and diversified liability structure is preserved, Group Treasury routinely monitors our funding status and reports its findings on a monthly basis to the Group ALCO. A key measure employed among our main analysis tools is the assessment of our “cash capital” position; this concept is designed to ensure that illiquid assets can be financed by stable sources of funding.

The cash capital supply consists of long-term sources of funds: unsecured funding with remaining time to maturity of at least one year; shareholders’ equity; and core deposits – the portion of customer deposits deemed to have a “behavioral” maturity of at least one year. Cash capital consumption reflects the illiquid portion of the assets which could not be transformed into cash by secured funding. For a given asset, the illiquid portion is the difference (the haircut) between the carrying value of an asset on the balance sheet and its effective cash value when used as collateral in a secured funding transaction.

We also regularly monitor our main funding portfolios for concentration risks.

1 As a percent of total funding sources defined as the CHF 782 billion on the balance sheet comprising Repurchase agreements, Securities lending against cash collateral received, Due to banks, Money market paper issued, Due to customers, Long-term debt (including financial liabilities at fair value) and Cash collateral on derivative transactions and Prime brokerage payables.
2 UBS has changed presentation of cash collateral for derivative transactions and prime brokerage receivables and payables. These positions are no longer included in interbank and demand deposits, but are shown on separate lines in the table above.
We continued to maintain a balanced portfolio of liabilities that is broadly diversified by market, product and currency. The vast product offerings and global scope of our business activities are the primary reasons for our financial flexibility. Funding is provided through numerous short-, medium- and long-term funding programs in Europe, the US and Asia, which provide specialized investments to institutional and private clients. Our domestic retail and global wealth management businesses are also a valuable source of funding.

The overall composition of our funding sources at the end of 2010 is shown in the “UBS: funding by product and currency” table and the pie-charts above. These funding sources amounted to CHF 782 billion on the balance sheet, down from CHF 792 billion a year before, and comprise repurchase agreements, securities lending against cash collateral received, due to banks, money market paper issued, due to customers and long-term debt including financial liabilities at fair value, cash collateral payables on derivative instruments and prime brokerage payables. The overall composition remained broadly similar to the prior year-end, with around 22% of our funding sources stemming from long-term debt (including financial liabilities designated at fair value) and a further 39% from customer time deposits, retail savings/deposits and customer demand deposits. Of the remainder, around 10% was from secured funding, approximately 12% was from interbank borrowing and money-market paper issuance, 12% from cash margin on derivatives and prime brokerage, and around 4% from fiduciary deposits.

Credit ratings
Credit ratings generally affect the cost and availability of funding, especially funding from wholesale unsecured sources. Our credit ratings can also influence the performance of some of our businesses as well as contributing to maintaining levels of client and counterparty confidence. Important factors used by rating agencies to assess a firm’s creditworthiness and determine its credit ratings include stability and quality of earnings, capital adequacy, risk profile and management, liquidity management, diversification of funding sources, asset quality and corporate governance. Credit ratings reflect the opinions of the rating agencies and can therefore be changed at any time.

Maturity breakdown of long-term straight debt portfolio
The “Long-term straight debt – contractual maturities” graph shows a contractual maturity breakdown of our long-term straight debt portfolio, and therefore excludes all structured debt, which is predominantly booked as financial liabilities designated at fair value. The long-term straight debt portfolio amounted to CHF 70 billion on 31 December 2010, up by CHF 6 billion from a year earlier. It is composed of CHF 61 billion of senior debt including both publicly and privately placed notes and bonds as well as Swiss cash bonds, and CHF 9 billion of subordinated debt.

Maturity analysis of financial liabilities

Contractual maturity information of our assets and liabilities serves as a starting point for the stress testing analyses described earlier. Our liquidity risk management framework includes a behavioral stress analysis, which involves a more detailed assessment of asset and liability cash flows as well as outflows from off-balance sheet exposures.

The contractual maturities of our non-derivative and non-trading financial liabilities as of 31 December 2010 presented in the table below are based on the earliest date on which we could be required to pay. The total amounts that contractually mature in each time-band are also shown for 31 December 2009. Derivative positions and trading liabilities, predominantly made up of short sale transactions, are assigned to the column “On demand” as management believes that this provides the most accurate reflection of the short-term nature of trading activities. The contractual maturity may extend over significantly longer periods.

1 Only financial instruments (as disclosed in “Note 29a Measurement categories of financial assets and financial liabilities” in the “Financial information” section of this report) are required to be disclosed in the maturity analysis, therefore, not all numbers in the table reconcile to the line items in the balance sheet. The differences relate to accrued expenses, deferred income and other liabilities and also comprise, deferred tax liabilities, provisions and liabilities from employee compensation plans. ² Our liquidity risk management focus is on short and mid-term cash flows. In these time periods, the carrying values of non-derivative financial liabilities largely approximate the undiscounted cash flows. ³ Represents carrying values. ⁴ Carrying value is fair value. Management believes that this best represents the cash flows that would have to be paid if these positions had to be settled or closed out. Refer to “Note 23 Derivative instruments and hedge accounting” in the “Financial information” section of this report for undiscounted cash flows of derivatives designated in hedge accounting relationships. ⁵ Contractual maturities of trading portfolio liabilities are: CHF 53.7 billion due within one month (2009: CHF 45.9 billion); and CHF 1.2 billion due more than one month (2009: CHF 1.6 billion). ⁶ The table below shows the maximum irrevocable amount of Guarantees, Commitments and Forward starting transactions.
Interest rate and currency management

Management of non-trading interest rate risk

Our largest non-trading interest rate exposures arise within our wealth management business divisions. With the exception of the Wealth Management Americas business, the inherent interest rate risk exposures are transferred from the originating business into one of two centralized interest rate risk management units: Group Treasury or the Investment Bank’s FICC unit. These units manage the risks on an integrated basis, maximizing the netting potential across risks from different sources.

The interest rate risk management responsibility for Wealth Management & Swiss Bank transactions executed in Switzerland was transferred to Group Treasury. The fixed-rate products do not contain embedded options, such as early prepayment, which would allow clients to prepay at par. All prepayments are therefore subject to market-based unwinding costs. Transactions executed outside of Switzerland continue to be transferred predominantly to FICC.

Current and savings accounts and many other retail products of Wealth Management & Swiss Bank have no contractual maturity date or direct market-linked rate, and therefore their interest rate risk cannot be transferred by simple back-to-back transactions. Instead, they are managed on a pooled basis via “replicating” portfolios. A replicating portfolio is a series of loans or deposits at market rates and fixed terms between the originating business unit and Group Treasury, structured to approximate, on average, the tenor profile mandated by senior management. The portfolios are rebalanced monthly. Their structure and parameters are based on long-term market observations and client behavior, and are regularly reviewed and adjusted as necessary. The originating business units are thus immunized as much as possible against market interest rate movements, but retain and manage their own product margin.

A significant amount of interest rate risk also arises from the financing of non-monetary-related balance sheet items, such as the financing of bank property and equity investments in associated companies. These risks are generally transferred to Group Treasury through replicating portfolios which, in this case, are designed to approximate the tenor profile mandated by senior management.

Group Treasury manages its residual open interest rate exposures, taking advantage of any offsets that arise between positions from different sources, within its approved market risk limits which include value-at-risk (VaR) and stress loss. The preferred risk management instruments are interest rate swaps, for which there is a liquid and flexible market. All transactions are executed via the Investment Bank. Group Treasury does not directly access the external market for swap transactions.

In addition to its regular risk management activities, Group Treasury executes transactions that aim to hedge negative effects on the Bank’s net interest income stemming from the prolonged period of extraordinarily low yields. As part of this strategy, UBS acquired in October and November 2010 approximately CHF 10 billion face amount of US Treasury securities and approximately CHF 5 billion face amount of UK Government bonds, with a weighted average maturity of approximately 8 years at the end of 2010. The portfolio is held on the balance sheet and is classified for accounting purposes as available-for-sale. The difference between the market value of these securities and their amortized cost does not affect net profit, but is included in the calculation of comprehensive income and accordingly affects our shareholders’ equity and our regulatory capital. In the fourth quarter of 2010, we charged CHF 545 million (pre-tax) against other comprehensive income as a result of reductions in the market value of this portfolio. Assuming that we continue to hold these securities, future changes in their market value will affect our other comprehensive income and capital. If we hold the securities until their maturity, the effect of market value changes would reverse over time back to amortized cost plus accrued interest at maturity.

➔ Refer to the “Market risk” section of this report for more information on our market risk measures and controls

Market risk arising from management of consolidated capital

Key ratios on capital and risk-weighted assets (RWA) are monitored by regulators and analysts and are key indicators of our financial strength.

1 As the minimum and maximum occur on different days for different risk types, it is not meaningful to calculate a portfolio diversification effect.
The majority of our capital and many of our assets are denominated in Swiss francs, but we also hold RWA and some eligible capital in other currencies, primarily US dollars, euros and British pounds. Any significant depreciation of the Swiss franc against these currencies would adversely impact our key ratios. Group Treasury’s mandate is to minimize adverse currency impacts on these ratios.

Group Treasury’s target to hedge the key ratios is based on a currency mix of capital that broadly reflects the currency distribution of our consolidated RWA. As the Swiss franc depreciates or appreciates against these currencies, the consolidated RWA increases or decreases relative to our capital. These currency fluctuations also lead to foreign currency translation gains or losses on consolidation, which are recorded through equity. Thus, our consolidated equity rises or falls in line with the fluctuations in the RWA. The capital of the parent bank itself is held predominantly in Swiss francs in order to avoid any significant effects of currency fluctuations on its standalone financial results.

Furthermore, Group Treasury has the mandate to generate a stable interest income flow from capital. The capital of the parent bank and its subsidiaries is placed via interest-bearing cash deposits internally within our entity network. Group Treasury further maintains a portfolio of interest rate swaps to achieve a target tenor profile and return on invested equity.

To provide a benchmark for investments of equity, Group Treasury defines a replicating portfolio of target tenors and currencies. The effective investment positions created by both internal cash deposits and interest rate swaps are then measured against this benchmark tenor replication portfolio. Mismatches between the two are measured, together with other non-trading interest rate risk positions, against Group Treasury’s market risk limits (VaR and stress loss).

Non-trading foreign exchange risks are managed under market risk limits, with the exception of Group Treasury management of consolidated capital activity.

On 31 December 2010, our consolidated equity was invested, according to target, as follows: in Swiss francs (including most of the capital of the Parent Bank) with an average duration of approximately three years and fair value sensitivity of CHF 9.5 million per basis point; in US dollars with an average duration of approximately four years and a sensitivity of CHF 7.1 million per basis point; in euros with an average duration of approximately three years and a sensitivity of CHF 0.9 million per basis point; and in British pounds with a duration of approximately three years and a sensitivity of CHF 0.4 million per basis point. The sensitivities directly relate to the chosen durations. Targeting significantly shorter tenors reduces fair value sensitivities, but leads to greater volatility in the interest income.

Corporate currency management

Our corporate currency management activities are designed to reduce the impact of adverse currency fluctuations on our reported financial results in Swiss francs, given regulatory constraints. We specifically focus on three principal areas of currency risk management: Currency matched funding of investments in non-Swiss franc assets and liabilities; sell-down of non-Swiss franc profits and losses; and selective hedging of anticipated non-Swiss franc profits and losses.

Currency matched funding and investment of non-Swiss franc assets and liabilities

For monetary balance sheet items and non-core investments, we follow the principle of matching the currency of our assets with the same currency of the liabilities from which they are funded, at least as far as it is practical and efficient to do so. A US dollar asset is thus typically funded in US dollars, while a euro liability is typically offset by an asset in euros. This avoids profits and losses arising from the retranslation of foreign currency assets and liabilities at the prevailing exchange rates to the Swiss franc at quarter-ends.

Sell-down of reported profits and losses

For accounting purposes, reported profit and losses are translated each month from their original transaction currencies into Swiss francs at exchange rates fixed at the prevailing month-end. In order to eliminate earnings volatility on the retranslation of previously recognized earnings in foreign currencies, Group Treasury centralizes the profits and losses arising in the parent bank and sells or buys them for Swiss francs. Our other operating entities follow a similar monthly sell-down process into their own reporting currencies. Retained earnings in operating entities with a reporting currency other than the Swiss franc are integrated and managed as part of our consolidated equity.

Hedging of anticipated future reported profits and losses

Our corporate currency management executes a dynamic and cost-efficient hedging strategy to protect anticipated future profit and losses in foreign currencies against possible adverse trends of foreign exchange rates from one reporting period to the next. At any point in time, Group Treasury may hedge part or all of the anticipated next three months’ earnings. Although intended to hedge future earnings, these transactions are accounted for as open currency positions and are subject to internal market risk VaR and stress loss limits.
Capital management

Eligible capital must be available to support business activities, in accordance with both our own internal assessment and the requirements of our regulators, in particular our lead regulator FINMA.

We aim to maintain sound capital ratios at all times, and we therefore consider not only the current situation but also projected business and regulatory developments. The main tools we employ to manage our capital ratios are: the active management of own shares, capital instruments, dividends and RWA.

Capital adequacy management

Ongoing compliance with regulatory capital requirements and target capital ratios is central to our capital adequacy management. In this process, we manage towards tier 1 and total capital target ratios. In the target setting process we take into account the current and future minimum requirements set by regulators as well as their “buffer” expectations. Furthermore, we consider our own internal assessment of aggregate risk exposure in terms of capital-at-risk, the views of rating agencies and comparisons with peer institutions.

➔ Refer to the “Risk management and control” section of this report for more information on earnings-at-risk and capital-at-risk

Regulatory requirements

We are subject to FINMA regulatory capital requirements, which result in higher RWA than under BIS guidelines.

➔ Refer to the additional capital management disclosure in the “Basel II Pillar 3” section of this report

To allow for comparability, published RWA are determined in accordance with the BIS guidelines. For the determination of the eligible capital, there were no differences between BIS guidelines and FINMA regulations as of 31 December 2010.

During 2010, we complied with all externally imposed capital requirements.

The Basel III revisions will have a negative impact on capital (mainly due to the exclusion of deferred tax assets, pension assets and hybrid tier 1 capital instruments for the calculation of common equity) and also mean significantly higher RWA. As a result, our common equity ratio would be materially lower than our current BIS tier 1 ratio, if Basel III requirements were effective immediately. It is therefore important to also consider the Basel III transitional arrangements, which effectively phase in the impacts on capital over several years.

➔ Refer to the “Regulatory developments” section of this report for more information

BIS capital ratios

The BIS capital ratios compare eligible capital (tier 1 and total capital) with total RWA.

On 31 December 2010, our BIS tier 1 capital ratio stood at 17.8% (up from 15.4% on 31 December 2009), our BIS core tier 1 capital ratio stood at 15.3% (up from 11.9% on 31 December 2009), while our BIS total capital ratio was 20.4% (up from 19.8% on 31 December 2009). Our BIS tier 1 capital increased by CHF 3.5 billion to CHF 35.3 billion, while RWA decreased to CHF 198.9 billion from CHF 206.5 billion.

➔ Refer to the discussions on “Capital adequacy management” and “Eligible capital” in this section for more information

Capital requirements

Our capital requirements are based on our consolidated financial statements in accordance with International Financial Reporting Standards (IFRS), adjusted for regulatory differences. Under IFRS, subsidiaries and special purpose entities that are directly or indirectly controlled by UBS must be consolidated, whereas for regulatory capital purposes, different consolidation principles apply. For example, subsidiaries that are not active in the banking and finance business are not consolidated.

➔ Refer to the additional capital management disclosure in the “Basel II Pillar 3” section of this report for more information

On 31 December 2010, BIS RWA were CHF 198.9 billion, compared with CHF 206.5 billion at year-end 2009. The analysis by component is as follows:
Credit risk
RWA for credit risk amounted to CHF 119.9 billion on 31 December 2010, compared with CHF 140.5 billion on 31 December 2009. The reduction was primarily related to lower derivatives RWA of CHF 7.9 billion and reduced drawn exposure RWA of CHF 8.7 billion, as well as a reduction in residential mortgage RWA of CHF 2.6 billion. These decreases occurred mainly in the Investment Bank and Wealth Management & Swiss Bank. The weakening of several major currencies against the Swiss franc has been a significant contributor to most of these RWA reductions.

➔ Refer to the “Credit risk” section of this report for more information

Non-counterparty related assets
RWA for non-counterparty related assets amounted to CHF 6.2 billion on 31 December 2010, compared with CHF 7.0 billion on 31 December 2009.

Market risk
In 2010, RWA for market risk increased by CHF 7.9 billion to CHF 20.8 billion on 31 December 2010. This was due to an increase in average regulatory VaR exposures, primarily resulting from increased credit spread risk.

➔ Refer to the “Market risk” section of this report for more information

Operational risk
RWA for operational risk increased to CHF 51.9 billion on 31 December 2010 from CHF 46.1 billion on 31 December 2009, as agreed with FINMA.

➔ Refer to the “Operational risk” section of this report for more information

Eligible capital
Eligible capital, the capital available to support RWA, consists of tier 1 and tier 2 capital. To determine eligible tier 1 and total capital, specific adjustments must be made to equity attributable to our shareholders as defined by IFRS and as shown on our balance sheet. The most notable adjustments are the deductions for goodwill, intangible assets, investments in unconsolidated entities engaged in banking and financial activities and own credit effects on liabilities designated at fair value.

Tier 1 capital
Tier 1 capital amounted to CHF 35.3 billion on 31 December 2010, compared with CHF 31.8 billion on 31 December 2009, an increase of CHF 3.5 billion. The positive contributors to this increase were the CHF 7.5 billion net profit attributable to UBS shareholders and the reversals of own credit losses of CHF 0.5 billion. These effects were partially offset by a redemption of hybrid tier 1 capital of CHF 1.5 billion, increased tier 1 deductions of CHF 1.0 billion (securitization exposures and other deduction items), negative effects relating to share-based compensation net of tax of CHF 0.9 billion, as well as currency effects of CHF 0.6 billion and other effects of CHF 0.5 billion.

Hybrid tier 1 capital
These instruments are perpetual and can only be redeemed if they are called by the issuer after having received regulatory approval. The payment of interest is subject to compliance with minimum capital ratios and other requirements. Any missed payment is non-cumulative. As of 31 December 2010, our hybrid tier 1 instruments amounted to CHF 4.9 billion, down from CHF 7.2 billion as of 31 December 2009. Under IFRS, these instruments are accounted for as equity attributable to non-controlling interests.

Tier 2 capital
These instruments consist mainly of our subordinated long-term debt that ranks senior to both our shares and hybrid tier 1 instruments but is subordinated to all our senior obligations. Tier 2 capital net of tier 2 deductions accounted for CHF 5.2 billion in total capital as of year-end 2010. In 2010, we redeemed a floating rate EUR 1.2 billion subordinated bond.

Risk and treasury management

Transfer of capital within UBS Group

Under Swiss company law, UBS is organized as an “Aktiengesellschaft”, a corporation that has issued shares of common stock to investors. UBS AG is the parent company of the Group. The legal entity structure of the Group is designed to support our businesses within an efficient legal, tax, regulatory and funding framework. We enter into intragroup transactions in order to provide funding and capital to individual UBS entities. As of 31 December 2010, we were not aware of any material restrictions, or other major impediments, concerning the transfer of funds or regulatory capital within the Group apart from those which apply to these entities by way of local laws and regulations.

IFRS equity to BIS tier 1 capital

The main differences between IFRS equity attributable to shareholders and tier 1 capital result from:

– The difference of CHF 0.4 billion in Net income recognized directly in equity, net of tax was due to cash flow hedge effects, which are reversed for BIS purposes and thereby reduced the amount by CHF 1.1 billion. This was partly offset by CHF 0.4 billion of net positive foreign currency translation effects and the reclassification for BIS purpose of fair value changes relating to Available-for-sale securities of CHF 0.3 billion.

Less: goodwill, intangible assets and other deduction items | (12,952) |

Less: accrual for expected future dividend payments | 0 |

Eligible tier 1 capital | 35,323 |
－ Retained earnings were lower under the BIS view than under IFRS by CHF 0.9 billion, primarily due to CHF 0.2 billion of life-to-date IFRS gains on own credit net of tax which are reversed for BIS purposes and CHF 0.3 billion attributable to differences in the scope of consolidation. The remainder is due to multiple factors, e.g. differences in measurement and recognition principles between IFRS and BIS, including a deduction for unrealized losses on available-for-sale securities.

－ A negative adjustment in *Treasury shares/deduction for own shares* of CHF 2.3 billion, mainly due to the different calculation of the capital deduction relating to share-based compensation.

**FINMA leverage ratio**

FINMA requires a minimum leverage ratio of 3% at a Group level and expects that, in normal times, the ratio will be well above this. This target is to be achieved by 1 January 2013 at the latest.

On 31 December 2010, our Group FINMA leverage ratio improved to 4.45%, compared with the 31 December 2009 ratio of 3.93%. During the year, average total assets prior to deductions decreased by CHF 27.7 billion to CHF 1,398.5 billion. The average total adjusted assets fell by CHF 15.2 billion to CHF 794.2 billion. The table below shows the FINMA leverage ratio calculation for the Group.

**Equity attribution framework**

The equity attribution framework reflects our overarching objectives of maintaining a strong capital base and guiding businesses toward activities with the best balance of profit potential, risk and capital usage. In June 2010, the key principles underlying the equity attribution framework received BoD approval.

Within this framework, the BoD attributes equity to the businesses after considering their risk exposure, RWA usage, asset size, goodwill and intangible assets.

The design of the equity attribution framework enables us to:

－ Calculate and assess return on attributed equity (RoE) in each of our business divisions. RoE is disclosed for all business divisions and units.

－ Integrate Group-wide capital management activities with those at business division and business unit levels.

－ Measure current period and historical performance in a consistent manner across business divisions and business units.

－ Make better comparisons between our businesses and those of our competitors.

The framework operates as follows: First, each business is attributed an amount of equity equal to the average book value of goodwill and intangible assets, as reported for that business division or business unit according to IFRS. Second, the BoD considers a number of factors that drive required capital, including:

－ Equity requirements based on aggregated risk exposure, including the potential for losses exceeding earnings capacity as defined by the firm’s risk-based capital. At certain other institutions, this factor is sometimes referred to as “economic capital”.

－ RWA usage and a target capital ratio for each business.

－ Asset size and a target leverage ratio for each business.

After reviewing the results of this formulaic approach, the Group ALCO recommends and the BoD makes adjustments to the final tangible equity attribution to reflect the amount of equity it believes is appropriate for each business. This assessment is based on the expectations of the business’s clients and the business environment, including allowing for sufficient capital to support the business’s underlying risks and sustain extreme stress scenarios. The amount of equity attributed to all the businesses corresponds to the amount that we believe is required to maintain a strong capital base and support our businesses adequately. If the total equity attributed to the businesses differs from the Group’s actual equity during a given period, the surplus or deficit is reflected in Treasury activities and other corporate items. The BoD currently makes equity attribution decisions on a quarterly basis.

₁ Total assets are calculated as the average of the month-end values for the three months in the calculation period. ₂ Includes the impact of netting agreements (including cash collateral) in accordance with Swiss Federal Banking law, based on the IFRS scope of consolidation. ₃ Includes mortgage loans to international clients for properties located in Switzerland. ⁴ Refer to the “Capital components” table for more information on deductions of assets from BIS tier 1 capital.
The amount of equity attributed to each division is an important input into the calculation of economic profit for that division. Broadly speaking, economic profit equals profits minus the product of attributed equity and the cost of equity.

As outlined in the table “Average attributed equity”, the amount of average equity attributed to the Investment Bank and Treasury activities and other corporate items increased by CHF 3.0 billion and CHF 2.0 billion respectively from the fourth quarter of 2009 to the fourth quarter of 2010. The Investment Bank increase was influenced by an expected moderate increase in the size of its assets and RWA over time.

In addition, the increases in both the Investment Bank and in Treasury activities and other corporate items were due to a refinement of our methodology. Previously, we had not explicitly taken account of the equity burden related to tier 1 deductions in the equity attribution framework. In the calculation of the RWA driver, we now convert these tier 1 deductions to the equivalent amount of tangible equity and add that to the amount of tangible equity needed to support reported RWA for each division. Similarly, in the calculation of the asset driver, we now convert these tier 1 deductions to the equivalent amount of tangible equity and add that to the amount of tangible equity needed to support the reported leverage ratio denominator for each division.

We continue to use both internal assessments of risk (as reflected in the UBS Risk-Based Capital framework) and regulatory measures of risk as drivers, as we believe that both play a role in the amount of equity needed to strongly support each division and UBS as a whole. In addition, we believe it is useful for top management and the BoD to compare equity requirements derived from internal risk measures with equity requirements derived from regulatory capital requirements and standards.

Further, the equity attribution framework continues to be forward-looking. Therefore, with regard to the RWA and asset drivers, we will be taking into account during 2011 the impacts of the enhanced Basel II framework and Basel III requirements.

Shares and capital instruments

Shares

UBS shares and tier 1 capital
The majority of our tier 1 capital comprises share premium and retained earnings attributed to UBS shareholders. As of 31 December 2010, total IFRS equity attributable to our shareholders amounted to CHF 46,820 million, and was represented by a total of 3,830,840,513 shares issued, of which 38,892,031 (1.0%) were held by UBS.

In 2010, the shares issued were increased by a total of 272,727,760 shares due to the conversion of CHF 13 billion mandatory convertible notes (MCN) on 5 March 2010, leading to an issuance of 272,651,005 shares from conditional capital. In addition, the exercise of employee options led to the issuance of 76,755 shares.

Each share has a par value of CHF 0.10, and generally entitles the holder to one vote at the shareholders’ meeting and to a proportionate share of distributed dividends. There are no preferential rights for shareholders and no other classes of shares are issued by the Parent Bank directly.

➔ Refer to the “Shareholders’ participation rights” section of this report for more information

Under Swiss company law, shareholders must approve in a shareholders’ meeting any increase in the total number of issued shares, which may arise from an ordinary share capital increase or the creation of conditional or authorized capital. The table below lists all shareholder-approved issuances of shares at year-end 2010. It is our objective not to dilute shares by the issuance of additional shares unless it is warranted by stressed financial market conditions or by regulators.

Shareholding of UBS shares

UBS holds own shares for two main purposes: in Group Treasury to cover employee share and option programs and in the Investment Bank, to a limited extent, for trading purposes where the Investment Bank engages in market-making activities in UBS shares and related derivative products. The holding of treasury shares on 31 December 2010 increased to 38,892,031 or 1.0% of shares issued, from 37,553,872 or 1.1% on the same date one year prior.

As of 31 December 2010, employee options and stock appreciation rights to receive 5.2 million shares were exercisable. Shares held in treasury or newly shares issued are delivered to the employee at exercise. On 31 December 2010, 25.8 million shares were available for this purpose, and an additional 149.9 million unissued shares in conditional share capital were assigned to cover future employee option exercises. At year-end 2010, the shares available covered all exercisable employee obligations.

The presentation in the table “Treasury share activities” shows the purchase of our shares by Group Treasury and does not include the activities of the Investment Bank.

Treasury shares held by the Investment Bank

The Investment Bank, acting as liquidity provider to the equity index futures market and as a market-maker in our shares and derivatives, has issued derivatives linked to UBS stock. Most of these instruments are classified as cash-settled derivatives and are primarily issued to meet client demand and for trading purposes. To hedge the economic exposure, a limited number of our shares are held by the Investment Bank.

Capital instruments

In order to improve the quality of capital, regulators are proposing new requirements for capital instruments and creating a new category of capital instruments: contingent convertible bonds (CoCo). The changes proposed are designed to increase the resilience against a financial crisis and are expected to maintain the banks in crisis as going concerns. Regulators view these instruments as additional protection against systemic risks of large banks.

➔ Refer to the “Regulatory developments” section of this report for more information

Mandatory convertible notes

As part of the measures taken to strengthen our capital base in 2008, we issued two MCN. The first had a principal amount of CHF 13 billion and consisted of private placements with two financial investors. The second was placed with the Swiss Confederation and had a principal amount of CHF 6 billion. The CHF 6 billion MCN was converted on 25 August 2009. The CHF 13 billion MCN expired on 5 March 2010, and was mandatorily converted into 273 million of newly issued shares, representing 7.7% of our then issued share capital.

Hybrid tier 1 capital

Hybrid tier 1 instruments represent innovative and non-innovative perpetual instruments. They are accounted for under non-controlling interests in the IFRS equity. Hybrid tier 1 instruments are perpetual instruments which can only be redeemed if they are called by the issuer after having received regulatory approval. If such a call is not exercised at the call date, the terms might include a change from fixed to floating coupon payments and, in the case of innovative instruments only, a limited step-up of the interest rate. Non-innovative instruments do not have a step-up of the interest rate and are therefore viewed as having a higher equity characteristic for regulatory capital purposes. The instruments are issued either through trusts or our subsidiaries and rank senior to our shares in dissolution. Payments under the instruments are subject to adherence to our minimum capital ratios and other requirements. Any missed payment is non-cumulative. We did not issue hybrid tier 1 instruments in 2010 but redeemed USD 1.5 billion of trust preferred securities. As of 31 December 2010, we had CHF 4,903 million of such instruments in various currencies outstanding.

1 This table excludes market-making and related hedging purchases by UBS. The table also excludes UBS shares purchased by investment funds managed by UBS for clients in accordance with specified investment strategies that are established by each fund manager acting independently of UBS; and also excludes UBS shares purchased by pension and retirement benefit plans for UBS employees, which are managed by a board of UBS management and employee representatives in accordance with Swiss law guidelines. UBS’s pension and retirement benefit plans purchased 53,000 UBS shares during the year and held 1,638,000 UBS shares as of 31 December 2010.
Tier 2 capital
The major element in tier 2 capital consists of subordinated long-term debt. Tier 2 instruments have been issued in various currencies and with a range of maturities across capital markets globally. They accounted for CHF 8,239 million in total eligible capital as of year-end 2010. Tier 2 instruments rank senior to both our shares and to hybrid tier 1 instruments but are subordinated to all our senior obligations. In 2010, we redeemed EUR 1.2 billion floating rate subordinated notes.

Distributions to shareholders
The decision whether to pay a dividend, and the level of the dividend, are dependent on our targeted capital ratios and cash flow generation. The decision on dividend payments is proposed by the BoD to the shareholders and is subject to their approval at the Annual General Meeting. The BoD has decided to further bolster capital and has therefore not proposed any dividend for the financial year 2010.
UBS shares in 2010

UBS shares are listed on the SIX Swiss Exchange (SIX) and the New York Stock Exchange (NYSE). As of 16 April 2010, UBS shares have been delisted from the Tokyo Stock Exchange.

➔ Refer to the “Capital structure” section of this report for more information on our shares, including par value, type and rights of security.

Over the course of 2010, UBS shares declined 4% on the SIX but rose 6% in US dollar terms on the NYSE, outperforming the global banking sector as measured by the Dow Jones Banks Titans 30 Index which declined 4%.

Share liquidity

During 2010, the daily average volume in UBS shares on the SIX was 16.4 million shares. On the NYSE, it was 1.2 million shares. The SIX trades a higher volume of UBS shares, and as such, it is expected to remain the main factor determining the movement in our share price.

During the hours in which both the SIX and NYSE are simultaneously open for trading (currently 3:30 p.m. to 5:30 p.m. Central European Time), price differences are likely to be arbitraged away by professional market-makers. The NYSE price will therefore typically be expected to depend on both the SIX price and the prevailing US dollar/Swiss franc exchange rate. When the SIX is closed for trading, traded volumes will typically be lower. However, the specialist firm making a market in UBS shares on the NYSE is required to facilitate sufficient liquidity and maintain an orderly market in UBS shares.

1 Market capitalization is calculated based on the total UBS ordinary shares issued multiplied by the UBS share price at period end. The total UBS ordinary shares issued as of 31 December 2009 do not reflect the 272.7 million UBS shares issued through the conversion of MCN placed with two investors in March 2008, and converted in March 2010. In addition, the total UBS ordinary shares as of 31 December 2008 do not reflect the 332.2 million shares issued through the conversion of MCN issued in December 2008, and converted in August 2009. Refer to “Note 8 Earnings per share (EPS) and shares outstanding” in the “Financial information” section of this report for more information.

1 Historical share price adjusted for the rights issue and stock dividend 2008.
Introduction

The Basel II capital adequacy framework consists of three pillars, each of which focuses on a different aspect of capital adequacy. Pillar 1 provides a framework for measuring minimum capital requirements for the credit, market and operational risks faced by banks. Pillar 2 addresses the principles of the supervisory review process, emphasizing the need for a qualitative approach to supervising banks. The aim of Basel II Pillar 3 is to encourage market discipline by requiring banks to publish a range of disclosures on risk and capital.

Overview of disclosures

This table provides an overview of our Basel II Pillar 3 disclosures in our Annual Report 2010.

Risk exposure measures and capital requirements

Our Pillar 3 disclosures may differ from the way we manage our risks and how these risks are disclosed in our quarterly reports and in other sections of this annual report.

Measures of risk exposure may differ depending on the purpose for which exposures are calculated: financial accounting under International Financial Reporting Standards (IFRS), determination of our required regulatory capital or our internal management of the firm. Our Basel II Pillar 3 disclosures are generally based on the measures of risk exposure that are used to calculate the regulatory capital that is required to underpin those risks.

The table below provides a more detailed summary of the approaches we use for the main risk categories for the determination of required regulatory capital.

The naming conventions for the “Exposure segments” used in the following tables are based on the Bank for International Settlements (BIS) rules and differ from those under Swiss and EU regulations. For example, “Sovereigns” under the BIS naming convention equates to “Central governments and central banks” as used under the Swiss and EU regulations. Similarly, “Banks” equates to “Institutions” and “Residential mortgages” equates to “Claims secured on residential real estate.”

Although we determine published risk-weighted assets (RWA) according to the Basel II Capital Accord (BIS guidelines), our calculation of the regulatory capital requirement is based on the regulations of FINMA, which are more conservative and therefore result in higher RWA.

Generally, the scope of consolidation for regulatory capital purposes follows the IFRS consolidation rules for subsidiaries directly or indirectly controlled by UBS AG which are active in the banking and finance business, but excludes subsidiaries in other sectors. The significant operating subsidiary companies in the UBS Group (Group) consolidated for IFRS purposes are listed in “Note 34 Significant subsidiaries and associates” in the “Financial information” section of this report. More specifically, the main differences in the basis of consolidation for IFRS and regulatory capital purposes relate to the following entity types and apply regardless of our level of control:

- Real estate and commercial companies as well as collective investment schemes are not consolidated for regulatory capital purposes but are risk-weighted.
- Insurance companies are not consolidated for regulatory capital purposes but are deducted from capital.
- Securitization vehicles are not consolidated for regulatory capital purposes but are treated under the securitization framework.
- Joint ventures that are controlled by two ventures are fully consolidated for regulatory capital purposes, whereas they are valued under equity method accounting for IFRS.

<table>
<thead>
<tr>
<th>Category</th>
<th>Our approach</th>
</tr>
</thead>
<tbody>
<tr>
<td>Credit risk</td>
<td>Under the advanced internal ratings-based (advanced IRB) approach applied for the majority of our businesses, credit risk weights are determined by reference to internal counterparty ratings and loss given default estimates. We use internal models, approved by FINMA, to measure the credit risk exposures to third parties on over-the-counter derivatives and repurchase-style (repo-style) transactions. For a subset of our credit portfolio, we apply the standardized approach based on external ratings.</td>
</tr>
<tr>
<td>Non-counterparty related risk</td>
<td>Non-counterparty related assets such as our premises, other properties and equipment require capital underpinning according to prescribed regulatory risk weights.</td>
</tr>
<tr>
<td>Settlement risk</td>
<td>Capital requirements for failed transactions are determined according to the rules for failed trades and non-delivery-versus-payment transactions under the BIS Basel II framework.</td>
</tr>
<tr>
<td>Equity exposures outside trading book</td>
<td>Simple risk weight method under the advanced IRB approach.</td>
</tr>
<tr>
<td>Market risk</td>
<td>Regulatory capital requirement is derived from our value-at-risk (VaR) model, which is approved by FINMA.</td>
</tr>
<tr>
<td>Operational risk</td>
<td>We have developed a model to quantify operational risk which meets the regulatory capital standard under the Basel II advanced measurement approach (AMA).</td>
</tr>
<tr>
<td>Securitization exposures</td>
<td>Securitization exposures in the banking book are assessed using the advanced IRB approach, applying risk weights based on external ratings.</td>
</tr>
</tbody>
</table>
Capital

The “Detailed segmentation of BIS risk-weighted assets” table provides a granular breakdown of our RWA. The table also shows the net exposure at default (EaD) per category for the current disclosure period, which forms the basis for the calculation of the RWA.

➔ Refer to the “Capital management” section of this report for more information on risk-weighted assets and the determination of eligible capital

Credit risk

The tables in this section provide details on the exposures used to determine the firm’s credit risk regulatory capital. The parameters applied under the advanced IRB approach are generally based on the same methodologies, data and systems used by the firm for internal credit risk quantification, except where certain treatments are specified by regulatory requirements. These include, for example, the application of regulatory prescribed floors and multipliers, and differences with respect to eligibility criteria and exposure definitions. The exposure information presented in this section differs therefore from that disclosed in the “Risk management and control” section of this report. Similarly the regulatory capital prescribed measure of credit risk exposure also differs to that required under IFRS.

With respect to the calculation of derivative exposures for determining our required regulatory capital, we apply the effective expected positive exposure as defined in Annex 4 to the Basel II framework. For a minor part of the derivatives portfolio, we also apply the current exposure method (based on the replacement value of derivatives in combination with a regulatory-prescribed add-on).

The regulatory net credit exposure detailed in the tables in this section is shown as the Basel II EaD after applying collateral, netting and other eligible risk mitigants permitted by the relevant regulations. This section also presents information on impaired and defaulted assets in a segmentation which is consistent with the regulatory capital calculation.

➔ Refer to the “Financial information” section of this report for more information

</tbody>
</table>

---

1 On 31 December 2010, approximately CHF 3 billion of the securitization exposures were deducted from capital and therefore do not generate RWA. 2 Simple risk weight method. 3 VaR approach. 4 Advanced measurement approach. 5 Reflects an additional charge of 10% on credit risk RWA for exposures treated under the standardized approach; a FINMA surcharge of 200% for RWA of non-counterparty-related assets and additional FINMA requirements for market risk. 6 As of 31 December 2010, the FINMA tier 1 ratio amounts to 16.4% and the FINMA total capital ratio to 18.9%. Taking into account the effects from the transitional provisions of the capital floor, which require 5% of the total FINMA RWA, FINMA RWA would increase by CHF 10.8 billion, resulting in a FINMA tier 1 ratio of 15.6% and a FINMA total capital ratio of 18.0%.

¹ Regulatory credit risk offsets and adjustments mainly include margin accounts for derivatives.
## Regulatory gross credit exposure covered by guarantees and credit derivatives

This table provides a breakdown of collateral information, showing exposures covered by guarantees as well as those covered by credit derivatives, according to Basel II defined exposure segments. These are defined as follows:

- **Corporates**: consists of all exposures that do not fit into any of the other exposure segments below. It includes private commercial entities such as corporations, partnerships or proprietorships, insurance companies, funds, exchanges and clearing houses.

- **Sovereigns (Central governments and central banks under Swiss and EU regulations)**: consists of exposures relating to sovereign states and their central banks, the Bank for International Settlement (BIS), the International Monetary Fund (IMF), the European Union including the European Central Bank and eligible multilateral development banks.

- **Banks (Institutions under Swiss and EU regulations)**: consists of exposures towards banks, i.e. legal entities holding a banking license. It also includes those securities firms that are subject to supervisory and regulatory arrangements comparable to those applied to banks according to the Basel II revised framework, including, in particular, risk-based capital requirements. Basel II also defines this regulatory exposure segment such that it contains exposures to public sector entities with tax-raising power or whose liabilities are fully guaranteed by a public entity.

- **Residential mortgages (claims secured on residential real estate under Swiss and EU regulations)**: consists of residential mortgages, regardless of exposure size, if the obligor owns and occupies or rents out the mortgaged property.

- **Lombard lending**: loans which are made against the pledge of eligible marketable securities or cash.

- **Other retail**: consists of exposures to small businesses, private clients and other retail customers without mortgage financing.

The collateral amounts in the table reflect the values used for determining regulatory capital. However, we utilize credit hedging to reduce concentrated exposure to individual names or sectors or in specific portfolios, which is not fully reflected in the regulatory numbers in this section.

Standardized approach

The standardized approach is generally applied where it is not possible to use the advanced IRB approach and/or where an exemption from the advanced IRB approach has been granted by FINMA. The standardized approach requires banks to use risk assessments prepared by External Credit Assessment Institutions (ECAI) or Export Credit Agencies to determine the risk weightings applied to rated counterparties. We use ECAI risk assessments to determine the risk weightings for the following classes of exposure:

- central governments and central banks
- regional governments and local authorities
- multilateral development banks
- institutions
- corporates

We selected three FINMA-recognized external credit assessment institutions for this purpose: Moody’s Investors Service, Standard and Poor’s Ratings Group and Fitch Group. The mapping of external ratings to the standardized approach risk weights is determined by FINMA and published on its website.
# Regulatory gross and net credit exposure by risk weight under the standardized approach

1 The eligible financial collateral reflects the impact of the application of regulatory haircuts. For traded products it is the difference between the IFRS reported values and the regulatory net credit exposure.
Impairment, default and credit loss

As illustrated in the tables below, our impaired assets decreased 46% on 31 December 2010 compared with 31 December 2009, mainly due to sales of legacy loan positions and reductions in our impaired derivative exposures.

**Impaired assets by region**

This table shows a breakdown of credit exposures arising from impaired assets and allowances/provisions according to Basel II defined exposure segments. Impaired asset exposures include loans, off-balance sheet claims, securities financing transactions, and derivative transactions.

¹ Collective credit valuation adjustments of CHF 723 million are partially included in the upper tier 2 capital and therefore not included in this table.  
² Total actual credit loss (credit loss expense and changes in specific credit valuation adjustments recognized in net trading income).

Total expected loss and actual credit loss

This table provides a breakdown of the one-year expected loss estimate on our credit portfolios (including lending, derivative and securities financing portfolios) calculated as of 31 December 2009, and the actual IFRS credit loss amount (including credit valuation adjustments on derivatives) charged against our income statement in 2010, according to Basel II defined exposure segments of the advanced IRB approach. Comparison between our expected and actual losses has certain limitations as the two measures are not directly comparable. In particular our expected loss estimate is an annualized average expected loss measure which takes into account our historical loss experience, whereas actual loss represents our credit loss expense charged to the income statement incurred in the financial year. The difference in our expected and actual loss amounts resulted primarily from credit recoveries affecting the net actual losses in 2010.

¹ Includes actual credit losses from securities, which amounted to CHF 172 million.  
² Includes changes in collective loan loss allowances and provisions.
Other credit risk tables

Our credit derivative trading is predominately on a collateralized basis. This means that our credit exposures arising from our derivatives activities with collateralized counterparties are typically closed out in full or reduced to nominal levels on a regular basis by the use of collateral.

Derivatives trading with counterparties with higher credit ratings (for example a large bank or broker-dealer) is typically under an International Swaps and Derivatives Association (ISDA) master trading agreement (MTA) and credit exposures to those counterparties from credit default swaps (CDS), together with exposures from other OTC derivatives, are netted and included in the calculation of the collateral required to be posted. Trading with lower rated counterparties (for example, hedge funds) would also generally require an initial margin to be posted by the counterparty.

We therefore receive collateral from or post collateral to our counterparties based on our open net receivable or net payable from OTC derivative activities. Under the terms of the ISDA MTA and like forms, that collateral (which generally takes the form of cash or highly liquid fixed income securities) is available to cover any amounts due under those derivative transactions.

Settlement risk (including payment risk) of CDS has been mitigated to some extent by the development of a market-wide credit event auction process which has resulted in a widespread shift to the cash settlement of CDS following a credit event on a reference entity. During 2009 and 2008, we participated in various industry-wide compression and “tear up” initiatives which reduced notional values and operational risks by terminating existing transactions and in certain cases replacing them with a smaller number of new transactions.

We have not experienced any significant losses from failed settlements on CDS contracts in 2010 and 2009.

The vast majority of our CDS trading activity is conducted by the Investment Bank. The “Credit derivatives portfolio (split by counterparty)” table provides further analysis of the Investment Bank’s CDS counterparties based on notional amount of CDS protection purchased and sold. The analysis shows that the vast majority of the Investment Bank’s CDS counterparties are market professionals. Based on the same notional measure, approximately 97% of these counterparties were rated investment grade and approximately 99% of the CDS activity was traded on a collateralized basis.

Credit exposure of derivative instruments

This table provides an overview of our credit exposures arising from derivatives. Exposures are provided based on the balance sheet carrying values of derivatives as well as regulatory net credit exposures. The net balance sheet credit exposure differs from the regulatory net credit exposures because of differences in valuation methods and the netting and collateral deductions used for accounting and regulatory capital purposes. Specifically, net current credit exposure is derived from gross positive replacement values, whereas regulatory net credit exposure is calculated using our internal credit valuation models.

1 Notional amounts of credit derivatives are based on accounting definitions and do not include any netting benefits. For capital underpinning of the counterparty credit risk of derivative positions, the effective expected positive exposure (or exposure according to current exposure method) is taken. 2 Notional amounts are reported based on regulatory scope of consolidation and do not include options and warrants. The reporting of notional amounts split between banking book and regulatory trading book have been aligned to reflect the allocation used for capital calculation under Pillar 1. As of 31 December 2009, total regulatory banking book notional amounts were previously reported as CHF 22,633 million, of which CHF 22,043 million was protection bought and CHF 589 million was protection sold. At the same date, total regulatory trading book notional amounts as of 31 December 2009 were previously reported as CHF 2,455,445 million, of which CHF 1,268,895 million was protection bought and CHF 1,186,550 million was protection sold.

1 Counterparty analysis based on notional CDS exposures of the Investment Bank sourced from credit risk systems.
**Investment positions**

The IFRS view differs from the regulatory capital view primarily due to: (i) differences in the basis of valuation in that IFRS is based on “fair value accounting” whereas “lower of cost or market value” (LOCOM) or “cost less impairment” are used for regulatory capital purposes; (ii) positions may be treated under a different framework to determine regulatory capital (for example tradable assets treated under market risk VaR); and (iii) differences in the scope of consolidation for IFRS, for example special purpose entities consolidated for IFRS but not for regulatory capital purposes.

Also shown in the table “Equities disclosure for banking book positions” are net realized gains and losses and latent revaluation gains. The firm had no latent revaluation losses that were not recognized in the statement of income relating to available-for-sale investments. In addition, there was no significant disparity between the share prices of investment positions held in publicly quoted entities and their fair value.

**Equities disclosure for banking book positions**

This table provides an overview of our equity investments held in the banking book for regulatory capital purposes. The calculation of equity investment exposure for financial accounting under IFRS differs from that required for regulatory capital purposes. The table illustrates these two measures of exposure as well as the key differences between them.

</table>
**Market risk**

Risk-weighted assets attributable to market risk increased to CHF 20.8 billion as of 31 December 2010, compared with CHF 12.9 billion as of 31 December 2009. We increased our trading risk exposure, as we took on more trading risk in line with the execution of our already communicated growth plans in the second half of 2010. The market risk regulatory capital requirement is 8% of the respective RWA. Market risk regulatory capital and RWA are derived from our VaR model and subject to regulatory determined multipliers.

### Group: value-at-risk (10-day, 99% confidence, 5 years of historical data)

This table provides a breakdown of the Group's minimum, maximum, average and period-end regulatory VaR by business division.

¹ 10-day 99% regulatory VaR and 1-day 99% regulatory VaR results are calculated separately from underlying positions and historical market moves. They cannot be inferred from each other. ² Backtesting is based on 1-day 99% regulatory VaR.
Securitization

Objectives, roles and involvement
The majority of our positions that are categorized as securitizations (according to the regulatory definition of such exposures) were held by the Investment Bank in the portfolio of assets reclassified to Loans and receivables from Held for trading in the fourth quarter of 2008 and the first quarter of 2009. As of 31 December 2010, this portfolio included CDO and CLO with CDS protection purchased from monoline insurers, US commercial mortgage-backed securities, the US reference-linked note program and student loan ARS. We also continued to repurchase student loan ARS from our clients in 2010 as a result of our commitment to restore liquidity to client holdings of these securities. Repurchased student loan ARS were also categorized as securitization exposures. From a risk control perspective these portfolios are subject to specific monitoring, which may include interest rate and credit spread sensitivity analysis, as well as inclusion in firm-wide earnings-at-risk, capital-at-risk and combined stress test metrics.

We intend to exit residual risk positions where appropriate. As part of our hedging strategy, in 2010 we completed the securitization of a portfolio of counterparty credit risk resulting from OTC derivatives.

We generally applied the ratings-based approach to securitization positions in the banking book using Moody's, Standard & Poor's and Fitch's Ratings. Under the ratings-based approach, the amount of capital is capped at the capital requirement that would be assessed against the underlying assets had they not been securitized. This treatment has been applied mainly to the US and European reference-linked note program and for the purposes of determining regulatory capital and Pillar 3 disclosure the underlying exposures are reported under the standardized approaches. The related positions are therefore not included in the tables below.

UBS applied the supervisory formula to the securitization of a portfolio of counterparty credit risk resulting from OTC derivatives where an external rating was not sought.

The counterparty risk of interest rate or foreign currency derivatives with securitization vehicles are treated under the advanced IRB approach and are therefore not part of this disclosure.

Accounting policies
For IFRS purposes, we treat originated securitized exposures as sales, i.e. they are derecognized from our balance sheet provided that specific derecognition criteria are met and we do not consolidate the transferee (as described in "Note 1 Summary of significant accounting policies" in the “Financial information” section of this report). A gain or loss on sale is recognized when exposures are derecognized. Derivatives used for synthetic securitizations are accounted for in line with the abovementioned note.

Securitization positions that are classified as trading assets for IFRS purposes are valued at fair value as described in “Note 27 Fair value of financial instruments” in the “Financial information” section of this report. Securitization positions that have been redesignated from Trading assets to Loans and receivables are valued at amortized cost less impairment as described in “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report.

Good practice guidelines
On 18 December 2008, the European Banking Federation, the Association for Financial Markets in Europe, the European Savings Banks Group and the European Association of Public Banks and Funding Agencies published the "Industry good practice guidelines on Pillar 3 disclosure requirement for securitization", which was slightly revised in 2009/2010. UBS is in compliance with all material aspects of these guidelines.
Securitization activity during the year

The table below shows exposures which we have securitized during the year. It also shows any gains or losses recognized on sales into these traditional securitization structures for regulatory capital purposes. The exposure values disclosed are based on the transaction date and were accounted for at fair value pre-securitization (the resulting gain or loss is not significant).

Early amortization treatment

We do not have securitization structures that are subject to the early amortization treatment.
Corporate governance and compensation
Corporate governance

– Our corporate governance principles are designed to support UBS towards sustainable profitability and protect the interests of our shareholders, as well as to create value for shareholders and stakeholders

Dual board structure

UBS operates under a strict dual board structure: the Board of Directors (BoD) and the Group Executive Board (GEB). This results in a clear separation of duties and responsibilities. The BoD is responsible for the UBS Group’s (Group) direction as well as monitoring and supervising the business. All BoD members are independent with the exception of the full-time Chairman. Shareholders elect each member of the BoD, which in turn appoints the Chairman. The GEB, which members are appointed by the BoD, is responsible for the executive management and is accountable to the BoD for the overall financial results of the Group. The GEB is led by the Group Chief Executive Officer (Group CEO).

Operational Group structure

The operational structure of the Group is comprised of the Corporate Center and four business divisions: Wealth Management & Swiss Bank, Wealth Management Americas, Global Asset Management and the Investment Bank.

Shareholder participation

We are committed to shareholder participation in our decision-making process. Our directly registered shareholders, as well as US shareholders registered via nominee companies, regularly receive written information about our activities and performance and are personally invited to shareholder meetings. We fully subscribe to the principle of equal treatment of all shareholders, who range from large investment institutions to individual investors, and regularly inform them about the development of the company of which they are co-owners.

Developments in 2010 that strengthened our leadership capacity

The Organization Regulations of UBS AG and its annexes were revised to implement all applicable regulatory requirements and further enhance the authority of the executive management. In addition, they simultaneously accentuate the supervisory role of the BoD and its various Committees and reflect the newly separated roles of the Vice Chairman and the Senior Independent Director.

The BoD is ultimately responsible for the financial success of the Group, and thus decides on the business strategy of the Group upon recommendation of the Group CEO and the GEB. The BoD is responsible for approving our annual report and quarterly financial statements as reviewed by the Audit Committee together with executive management, Group Internal Audit and external auditors. Furthermore, the BoD is responsible for approving our risk capacity and appetite, taking into account the proposals and alternatives suggested by the Risk Committee.

In addition, the Annual General Meeting offers shareholders the opportunity to raise any questions regarding our development and the events of the respective year under review. BoD and GEB members, as well as the internal and external auditors, are present to answer these questions.

Transparency report

In October 2010, we published the “Transparency report to the shareholders of UBS”, which is a comprehensive review of the events that took place during the financial crisis. In publishing this report, the BoD responded to the report publicized by the control committee of the Swiss parliament in May 2010. The transparency report is supported by two reports from independent experts who assessed the events from a legal and historic perspective.
2010 compensation at a glance

– Our foremost priority is to encourage and reward behavior that contributes to sustainable profitability and therefore the long-term success of our firm.

– In order to align employee incentives with the interests of our shareholders, we pay a significant part of our employees’ variable compensation in the form of deferred awards, mostly in UBS shares, which are subject to strict forfeiture rules.

Bonuses granted for 2010

In making UBS’s compensation decisions for 2010, the BoD and the GEB have carefully balanced all the relevant factors such as our improved business performance, industry compensation trends and regulatory requirements. From a shareholder’s perspective, it is essential to weigh the short-term potential for raising profitability against the long-term requirement to retain and attract key staff. Although our financial performance in 2010 was markedly better than in 2009, with an increase in profitability of CHF 10 billion, given the considerations outlined above, the bonus pool for 2010 was set at CHF 4,245 million, 11% lower than it was last year.

High levels of deferred bonuses for Group Executive Board members

At least 76% of a GEB member’s bonus, including 60% in equity (under the Performance Equity Plan [PEP] and the Senior Executive Equity Ownership Plan [SEEOP]), is deferred and at risk of forfeiture for periods of up to five years. Moreover, the vesting of these awards is subject to the fulfillment of specific performance conditions. A maximum of 24% in cash (under the Cash Balance Plan [CBP]) is paid out immediately, subject to a cap of CHF/USD 2 million.

– As in 2009, the Group CEO has decided to waive the bonus.
– The highest paid GEB member in 2010 was Carsten Kengeter, with a total compensation of CHF 9.3 million: 88% of his bonus was deferred, with 28% in deferred cash and 60% in deferred equity vesting over three to five years.
– In total, the compensation for GEB members in office on 31 December 2010 was CHF 91.0 million, compared with a total of CHF 68.7 million in 2009.
– The Chairman of the BoD, Kaspar Villiger, chose to waive a substantial part of the share award and instead to accept a limited number of 26,940 UBS shares with a fair value of CHF 500,000. In addition, he decided to maintain the voluntary reduction in his annual base salary from CHF 2 million to CHF 850,000. Kaspar Villiger is the highest paid member of the BoD, with total compensation of CHF 1,491,308.
– Fees for the independent BoD members remained unchanged in 2010.
Corporate governance

Our corporate governance principles are designed to support our objective of sustainable profitability, as well as to create value and protect the interests of our shareholders and stakeholders. We use the term “corporate governance” when referring to the organizational structure of UBS and operational practices of our management.

We are subject to, and fully comply with, the following regulatory requirements regarding corporate governance: the Swiss Code of Obligations (CO) articles 663b and 663c (paragraph three) regarding transparency of compensation paid to members of the Board of Directors (BoD) and senior management; the SIX Swiss Exchange’s (SIX) “Directive on Information Relating to Corporate Governance”; the Swiss Financial Market Supervisory Authority’s (FINMA) “Circular 2010/1 Remuneration schemes” (FINMA Circular 2010/1); and the standards established in the Swiss Code of Best Practice for Corporate Governance, including the appendix on executive compensation.

In addition, as a foreign company with shares listed on the New York Stock Exchange (NYSE), we comply with all corporate governance standards applicable to foreign listed companies.

This section provides the information required as set forth by the following regulatory requirements:
- The SIX “Directive on Information Relating to Corporate Governance”, with regard to: Group structure and shareholders; capital structure; BoD; Group Executive Board (GEB); compensation, shareholdings and loans; shareholders’ participation rights; change of control and defense measures; auditors and information policy.
- Articles 663b and 663c (paragraph three) of the CO, “Supplementary disclosures for companies whose shares are listed on a stock exchange: compensations and participations”, with regard to remuneration, share and option ownership and loans. These disclosures are also included in the audited financial statements of this report. This information is marked by a bar on the left-hand side throughout this section.
- The FINMA Circular 2010/1, with regard to the BoD’s duty to annually report on the implementation of the remuneration policy.
- The NYSE “Corporate Governance Listing Standards” with regard to foreign listed companies: independence of directors, BoD Committees and differences from the NYSE standards applicable to US domestic issuers.

In addition to the regulatory requirements mentioned above, this section summarizes the regulatory and supervisory environment of UBS in our principal locations, and provides a list of all members of our BoD and GEB. Updates have been made to the sections discussing the BoD, GEB, and compensation and shareholdings. These updates follow a revision of the Organization Regulations of UBS AG and its annexes (Organization Regulations), which was conducted by the BoD throughout the summer of 2010.

On 1 August 2010, the revised Organization Regulations came into effect. They implement the FINMA Circular 2010/1, stating that the total compensation for GEB members is subject to approval by the BoD, upon recommendation by the BoD’s Human Resources and Compensation Committee (HRCC), and any severance payments exceeding CHF 2 million must also be approved by the BoD. In addition, they further align the responsibilities and authorities between the BoD and the Group Asset and Liability Management Committee (Group ALCO), by allocating the approval authority to the BoD for determination of cost of equity for the UBS Group (Group) and its business divisions, and for the attribution of equity to the Group and its business divisions. Furthermore, they reflect the newly separated roles of the Vice Chairman and the Senior Independent Director (SID).

Refer to www.ubs.com/governance for more details on the Organization Regulations.
Group structure and shareholders

UBS Group legal entity structure

Under Swiss company law, UBS AG is organized as a limited company: a corporation that has issued shares of common stock to investors. UBS AG is the Parent Bank of the Group.

Our legal entity structure is designed to support our businesses within an efficient legal, regulatory, tax and funding framework. Neither our business divisions nor the Corporate Center are separate legal entities: they primarily operate out of the Parent Bank, UBS AG, through its branches worldwide. This structure is designed to capitalize on the increased business opportunities and cost efficiencies offered by the use of a single legal platform, and to enable the flexible and efficient use of capital. Where it is neither possible nor efficient to operate out of the Parent Bank, businesses operate through local subsidiaries. This can be the case when required for legal, tax or regulatory purposes, or as additional legal entities join the Group through acquisition.

Operational Group structure

On 31 December 2010, the operational structure of the Group comprised the Corporate Center and four business divisions: Wealth Management & Swiss Bank, Wealth Management Americas, Global Asset Management and the Investment Bank. In this report, performance is reported according to this structure.

→ Refer to the "UBS business divisions and Corporate Center" section of this report for more information

Listed and non-listed companies belonging to the Group

The Group includes a number of consolidated entities, none of which, however, are listed companies other than UBS AG.

→ Refer to “Note 34 Significant subsidiaries and associates” in the “Financial information” section of this report for details of significant operating subsidiary companies of the Group

Significant shareholders

Under the Federal Act on Stock Exchanges and Securities Trading of 24 March 1995, as amended (the Swiss Stock Exchange Act), anyone holding shares in a company listed in Switzerland, or holding derivative rights related to shares of such a company, has to notify the company and the SIX if the holding attains, falls below or exceeds one of the following thresholds: 3, 5, 10, 15, 20, 25, 33⅓, 50, or 66⅔% of the voting rights, whether they are exercisable or not. The detailed disclosure requirements and the methodology for calculating the thresholds are defined in the Ordinance of the Swiss Financial Market Supervisory Authority on Stock Exchanges and Securities Trading (the Ordinance). In particular, the Ordinance takes into account all future potential share obligations irrespective of their possible contingent nature, and prohibits the netting of so-called acquisition positions (in particular shares, conversion rights and acquisition rights or obligations) with disposal positions (i.e. rights or obligations to sell). It further requires that each such position be calculated separately, and be reported as soon as it reaches one of the abovementioned thresholds. Nominee companies which cannot autonomously decide how voting rights are exercised, are not obligated to notify UBS and the SIX in case they reach, exceed or fall below the threshold percentages.

In addition, pursuant to the CO, UBS must disclose in its notes to the financial statements the identity of any shareholder with a holding of more than 5% of the total share capital of UBS AG.

According to disclosure notifications filed with UBS AG and the SIX, on 8 June 2010, The Capital Group Companies, Inc., Los Angeles, disclosed a holding of 4.90% of the total share capital of UBS AG. On 12 March 2010, the Government of Singapore, Singapore, as beneficial owner, disclosed under the Swiss Stock Exchange Act, a holding by the Government of Singapore Investment Corp. of 6.45% of the total share capital of UBS AG. On 17 December 2009, BlackRock Inc., New York, disclosed according to the Swiss Stock Exchange Act, a holding of 3.45% of the total share capital of UBS AG. In accordance with the Swiss Stock

Exchange Act, the percentages indicated above were calculated in relation to the share capital reflected in the Articles of Association of UBS AG (Articles of Association) at the time of the respective disclosure notification. Information on disclosures under the Swiss Stock Exchange Act can be found on the following website of the SIX: http://www.six-exchange-regulation.com/obligations/disclosure/major_shareholders_en.html.

According to our share register, the shareholders (acting in their own name or in their capacity as nominees for other investors or beneficial owners) listed in the “Significant shareholders” table below, were registered with 3% or more of the total share capital on 31 December 2010, 2009 and 2008.

Cross shareholdings

We have no cross shareholdings in excess of a reciprocal 5% of capital or voting rights with any other company.
Capital structure

Capital

Under Swiss company law, shareholders must approve in a shareholders’ meeting any increase in the total number of issued shares, which may arise from an ordinary share capital increase, or the creation of conditional or authorized capital. At year-end 2010, 3,830,840,513 shares were issued with a par value of CHF 0.10 each, leading to ordinary share capital of CHF 383,084,051.30. This includes 272,651,005 shares issued in 2010 out of conditional share capital upon conversion of CHF 13 billion in mandatory convertible notes (MCN) on 5 March 2010; and 76,755 (of which 3,171 under former PaineWebber employee option plans) shares issued for employee option exercises out of conditional capital, all of which took effect in 2010.

Conditional share capital
At year-end 2010, the following conditional share capital was available to the BoD:

- At the Annual General Meeting (AGM) held in 2006, shareholders approved conditional capital in the maximum amount of 150,000,000 shares to be used for employee option grants. Options are exercisable at any time between their vesting and expiration dates. Shareholders have no pre-emptive rights. In 2010, options on 73,584 shares were exercised under the option plans with a total of 149,920,712 conditional capital shares being available to satisfy further exercises of options.
- At the AGM held in 2010, shareholders approved conditional capital in the amount of up to 380,000,000 fully paid registered shares, with a nominal value of CHF 0.10 each, through the exercise of conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments by UBS. Shareholders have no pre-emptive rights. The owners of conversion rights and/or warrants shall be entitled to subscribe to the new shares. At year-end 2010, the BoD had not made use of the allowance to issue bonds or warrants with conversion rights covered by conditional share capital.
- At the AGM held on 15 April 2009, our shareholders approved the creation of conditional capital for the potential issuance of 100,000,000 shares in the event of exercise of warrants granted to the Swiss National Bank (SNB) in connection with the loan granted by the SNB to the SNB StabFund.

Changes of shareholders’ equity and shares
According to International Financial Reporting Standards (IFRS), equity attributable to UBS shareholders amounted to CHF 46.8 billion on 31 December 2010 (CHF 41.0 billion in 2009, and CHF 32.5 billion in 2008). The UBS Group shareholders’ equity was represented by 3,830,840,513 issued shares on 31 December 2010 (2009: 3,558,112,753; 2008: 2,932,580,549).

Shares and participation certificates
We have only one unified class of shares issued. Our shares are issued in registered form, and are traded and settled as global registered shares. Each registered share has a par value of CHF 0.10 and carries one vote subject to the restrictions set out under “Transferability, voting rights and nominee registration”. Global registered shares provide direct and equal ownership for all shareholders, irrespective of the country and stock exchange on which they are traded.

Ownership of UBS shares is widely spread. The additional tables on the following page provide information about the distribution of our shareholders by category and geographical location. This information relates only to registered shareholders and cannot be assumed to be representative of our entire investor base nor the actual beneficial ownership. Only shareholders registered in the share register as “shareholders with voting rights” are entitled to exercise voting rights.

Authorized share capital
The BoD has no authorized share capital available.

Transferability, voting rights and nominee registration

We do not apply any restrictions or limitations on the transferability of shares. Voting rights may be exercised without any restrictions by shareholders entered into the share register, if they expressly render a declaration of beneficial ownership according to the provisions of the Articles of Association.

We have special provisions for the registration of fiduciaries and nominees. Fiduciaries and nominees are entered in the share register with voting rights up to a total of 5% of all shares issued, if they agree to disclose upon our request, beneficial owners holding 0.3% or more of all UBS shares. An exception to the 5% voting limit rule exists for securities clearing organizations such as The Depository Trust Company in New York.

➔ Refer to the “Shareholders’ participation rights” section of this report for more information

Capital instruments

On 31 December 2010, there were no contingent capital securities or convertible bonds outstanding requiring the issuance of new shares. We had CHF 4,903 million principal amount of deeply subordinated capital instruments outstanding, which count as hybrid tier 1 capital under Swiss regulatory rules, and CHF 8,239 million principal amount of outstanding tier 2 capital securities (mainly subordinated bonds). We did not issue any capital instruments in 2010.

Options

In connection with the loan granted by the SNB to the SNB Stab-Fund, we have issued warrants granted to the SNB sourced by conditional capital for which 100,000,000 shares were approved by our shareholders. The warrants are exercisable only if the SNB incurs a loss on its loan to the fund.

On 31 December 2010, there were 263,561,259 employee options and stock appreciation rights outstanding. Delivery obligations equivalent to 5,235,741 shares were exercisable. We source our option-based compensation plans either by purchasing UBS shares in the market, or through the issuance of new shares out of conditional capital. On 31 December 2010, 25,842,908 treasury shares were available for this purpose, and an additional 149,920,712 unissued shares in conditional share capital were assigned to future employee option exercises. At year-end 2010, the shares available covered all exercisable employee obligations.

➔ Refer to the “Shares and capital instruments” section of this report for more information on options
Shareholders’ participation rights

We are committed to shareholder participation in our decision-making process. More than 350,000 directly registered shareholders, as well as some 90,000 US shareholders registered via nominee companies, regularly receive written information about our activities and performance and are personally invited to shareholder meetings.

➔ Refer to the “Information policy” section of this report for more information

Relationships with shareholders

We fully subscribe to the principle of equal treatment of all shareholders, who range from large investment institutions to individual investors, and regularly inform them about the development of the company of which they are co-owners.

The AGM offers shareholders the opportunity to raise any questions regarding our development and the events of the year that is under review. BoD and GEB members, as well as the internal and external auditors, are present to answer these questions.

Voting rights, restrictions and representation

We place no restrictions on share ownership and voting rights. Nominee companies and trustees, who normally represent a large number of individual shareholders, may hold an unlimited number of shares, but we have provisions according to which voting rights are limited to a maximum of 5% of outstanding UBS shares in order to avoid the risk of unknown shareholders with large stakes being entered in the share register. Securities clearing organizations, such as The Depository Trust Company in New York, are not subject to the 5% voting limit.

In order to be recorded in the share register with voting rights, shareholders must confirm that they acquired UBS shares in their own name and for their own account. Nominee companies and trustees are required to sign an agreement confirming their willingness to disclose, upon our request, individual beneficial owners holding more than 0.3% of all issued shares.

All sharehoders registered with voting rights are entitled to participate in shareholder meetings. If they do not wish to attend in person, they can issue instructions to accept, reject or abstain on each individual item on the meeting agenda, either by giving instructions to an independent proxy designated by UBS, as required under Swiss company law, or by appointing UBS, another bank or another registered shareholder of their choice to vote on their behalf. Nominee companies normally submit the proxy material to the beneficial owners and transmit the collected votes to UBS.

Statutory quorums

Shareholder resolutions, the election and reelection of BoD members and the appointment of the Group and statutory auditors are decided at the AGM by an absolute majority of the votes cast, excluding blank and invalid ballots. Swiss company law requires that, for certain specific issues, a majority of two-thirds of the votes represented at the AGM, and the absolute majority of the par value of shares represented at the AGM, must vote in favor of the resolution. These issues include, among others, the creation of shares with privileged voting rights, the introduction of restrictions on the transferability of registered shares, conditional and authorized capital increases, and restrictions or exclusion of shareholders’ pre-emptive rights.

The Articles of Association also requires a two-thirds majority of votes represented for any change to its provisions regarding the number of BoD members, and any decision to remove one-fourth or more of the BoD members.

Votes and elections are normally conducted electronically to clearly ascertain the exact number of votes cast. Voting by a show of hands remains possible if a clear majority is predictable. Shareholders representing at least 3% of the votes represented may still request that a vote or election take place electronically or by written ballot. In order to allow shareholders to clearly express their views on all individual topics, each item on the agen-
da is put to vote separately and BoD elections are made on a person-by-person basis.

**Convocation of general meetings of shareholders**

The AGM normally takes place each year in April, but in any case within six months of the close of the financial year. A personal invitation including a detailed agenda and explanation of each motion is sent to every registered shareholder at least 20 days ahead of the scheduled AGM. The meeting agenda is also published in the Swiss Official Gazette of Commerce and in selected Swiss newspapers as well as on the internet at www.ubs.com/agm.

Extraordinary General Meetings (EGM) may be convened whenever the BoD or the statutory auditors consider it necessary. Shareholders individually or jointly representing at least 10% of the share capital may, at any time, ask in writing that an EGM be convened to deal with a specific issue put forward by them. Such a request may also be brought forward during the AGM.

**Placing of items on the agenda**

Shareholders individually or jointly representing shares with an aggregate par value of CHF 62,500 may submit proposals for matters to be placed on the agenda for consideration at the shareholders’ meeting.

We publish the deadline for submitting such proposals in the Swiss Official Gazette of Commerce and on our website www.ubs.com/agm. Requests for items to be placed on the agenda must include the actual motions to be put forward, together with a short explanation, if necessary. The BoD formulates opinions on the proposals, which are published together with the motions.

**Registrations in the share register**

The general rules for being entered with voting rights in our Swiss or US share registers also apply before general meetings of shareholders. There is no “closing of the share register” in the days before the meeting. Registrations, including the transfer of voting rights, are processed for as long as technically possible, normally until two days before the meeting.
Board of Directors

The BoD, under the leadership of the Chairman, decides on the strategy of the Group upon recommendation of the Group Chief Executive Officer (Group CEO), exercises the ultimate supervision over senior management, and appoints all GEB members. The BoD also approves all financial statements for issue. Shareholders elect each member of the BoD, which in turn appoints its Chairman, Vice Chairman, SID, the members of the BoD Committees and their respective Chairpersons.

Members of the Board of Directors

At the AGM held on 14 April 2010, Kaspar Villiger, Michel Demaré, David Sidwell, Sally Bott, Rainer-Marc Frey, Bruno Gehrig, Ann F. Godbehere, Axel P. Lehmann, Helmut Panke and William G. Parrett were reelected as their terms of office expired. Sergio Marchionne and Peter R. Voser tendered their resignation. Wolfgang Mayrhuber was elected to his first term on the BoD. Following their election, the BoD appointed Michel Demaré as Vice Chairman and David Sidwell as SID. On 22 July 2010, UBS nominated Joseph Yam, former Chief Executive of the Hong Kong Monetary Authority, for election to the BoD at the 2011 AGM. On 31 December 2010, with the exception of the non-independent Chairman, Kaspar Villiger, all BoD members were considered independent by the BoD. Sally Bott resigned from the BoD effective on 11 February 2011.

The following biographies provide information on the BoD members on 31 December 2010.

Kaspar Villiger
Swiss, born 5 February 1941
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Chairman of the Board of Directors / Chairperson of the Corporate Responsibility Committee / Chairperson of the Governance and Nominating Committee

Year of initial appointment: 2009

Professional history and education
Kaspar Villiger was elected to the Board of Directors (BoD) at the 2009 Annual General Meeting (AGM) and was thereafter appointed Chairman of the BoD. He chairs the Corporate Responsibility Committee and the Governance and Nominating Committee. Mr. Villiger was elected Federal Councilor in 1989, and served as the Minister of Defense and Head of the Federal Military Department until 1995. Subsequently, he served as Finance Minister and Head of the Federal Department of Finance until he stepped down at the end of 2003. In addition to Federal Councilor, he served as President of the Swiss Confederation, in 1995 and 2002. In 2004, he was elected to the boards of Nestlé, Swiss Re and the Neue Zürcher Zeitung, all of which he resigned from in 2009 when he took on the position of Chairman of UBS. As co-owner of the Villiger Group, Mr. Villiger managed the Swiss parent firm, Villiger Söhne AG, from 1966 until 1989. In addition, Mr. Villiger held several political positions, first in the parliament of the canton of Lucerne and, from 1962 until 1989, in the Swiss Parliament. He graduated from the Swiss Federal Institute of Technology (ETH) in Zurich with a degree in mechanical engineering in 1966.

Michel Demaré
Belgian, born 31 August 1956
ABB Ltd., Affolternstrasse 44, P.O. Box 5009, CH-8050 Zurich

Functions in UBS
Independent Vice Chairman / member of the Audit Committee / member of the Governance and Nominating Committee

Year of initial appointment: 2009

Professional history and education
Michel Demaré was elected to the BoD at the 2009 AGM, and in April 2010 appointed independent Vice Chairman. He is a member of the Audit Committee and the Governance and Nominating Committee. Mr. Demaré joined ABB in 2005 as Chief Financial Officer (CFO) and as a member of the Group Executive Committee. In addition, he became President of Global Markets in November 2008. Between February and September 2008, he acted as the interim CEO of ABB. Mr. Demaré joined ABB from Baxter International Inc., where he was CFO Europe from 2002 to 2005. Prior to this role, he spent 18 years at the Dow Chemical Company, holding various treasury and risk management positions in Belgium, France, the US and Switzerland. Between 1997 and 2002, he was the CFO of the Global Polymers and Elastomers division. Mr. Demaré began his career as an officer in the multinational banking division of Continental Illinois National Bank of Chicago, and was based in Antwerp. He graduated with an MBA from the Katholieke Universiteit Leuven, Belgium, and holds a degree in applied economics from the Université Catholique de Louvain, Belgium.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Demaré is a member of the IMD Foundation Board in Lausanne.
David Sidwell
American (US) and British, born 28 March 1953
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Senior Independent Director / Chairperson of the Risk Committee

Year of initial appointment: 2008

Professional history and education
David Sidwell was elected to the BoD at the 2008 AGM. In April 2010, he was appointed Senior Independent Director, and chairs the Risk Committee. Mr. Sidwell was Executive Vice President and CFO of Morgan Stanley between 2004 and 2007. Before joining Morgan Stanley, he was with JPMorgan Chase & Co., where in his 20 years of service, he held a number of different positions including Controller, and from 2000 to 2004 CFO of the Investment Bank. Prior to this, he was with Price Waterhouse in both London and New York. Mr. Sidwell graduated from Cambridge University and is a chartered accountant qualifying in the Institute of Chartered Accountants in England and Wales.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Sidwell is a Director and Chairperson of the Risk Policy and Capital Committee of Fannie Mae, Washington D.C., and a Senior Advisor at Oliver Wyman, New York. He is a trustee of the International Accounting Standards Committee Foundation, London, the Chairman of the board of Village Care, New York, and is a Director of the National Council on Aging, Washington D.C.

Sally Bott
American (US), born 11 November 1949
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Chairperson of the Human Resources and Compensation Committee / member of the Corporate Responsibility Committee / member of the Governance and Nominating Committee, resigned with effect on 11 February 2011

Year of initial appointment: 2008

Professional history and education
Sally Bott was elected to the BoD at the October 2008 Extraordinary General Meeting (EGM). Until her resignation with effect on 11 February 2011, she chaired the Human Resources and Compensation Committee. Furthermore, she was a member of the Corporate Responsibility Committee and the Governance and Nominating Committee. Ms. Bott served as the Group Human Resources (HR) Director of BP plc, from 2005 until 2011, and was member of BP’s Group Executive Committee. As of April 2011, Ms. Bott will be the Head of Human Resources at Barclays plc. Ms. Bott has spent most of her career in financial services. Between 2000 and 2005, she was a Managing Director at Marsh & McLennan Companies and Head of Global HR for Marsh Inc. She was at Barclays Bank from 1994 to 2000, first as Barclays de Zoete Wedd HR Director and then as Group HR Director from 1997 to 2000. In 1970, she joined Citibank out of college as a research analyst in the economics department where she was credit trained and worked in the finance function. She moved into HR in 1978, and worked as an HR Director in most of Citibank’s wholesale bank and investment banking businesses for the next 15 years. She was the Global HR Director of the wholesale bank from 1990 to 1993. Ms. Bott studied at Manhattanville College, and graduated with a bachelor’s degree in economics.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Ms. Bott is a member of the board of the Carter Burden Center for the Aging in New York City.

Rainer-Marc Frey
Swiss, born 10 January 1963
Office of Rainer-Marc Frey, Seeweg 39, CH-8807 Freienbach

Functions in UBS
Member of the Audit Committee / member of the Risk Committee

Year of initial appointment: 2008

Professional history and education
Rainer-Marc Frey was elected to the BoD at the October 2008 EGM and is a member of the Audit Committee and the Risk Committee. Mr. Frey is the founder of the investment management company Horizon21. He is the Chairman of Horizon21 as well as of its related entities and subsidiaries. In 1992, he founded and was appointed CEO of RMF Investment Group. RMF was acquired by Man Group plc in 2002. Between 2002 and 2004, he held a number of senior roles within Man Group and was the largest individual shareholder. From 1989 to 1992, Mr. Frey served as a director at Salomon Brothers in Zurich, Frankfurt and London, where he was primarily involved with equity derivatives. Between 1987 and 1989, he worked for Merrill Lynch covering equity, fixed income and swaps markets. He holds a degree in economics from the University of St. Gallen.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Frey is a member of the board of DKSH Group, Zurich, as well as of the Frey Charitable Foundation, Freienbach.
Corporate governance and compensation

Corporate governance

Bruno Gehrig
Swiss, born 26 December 1946
Swiss International Air Lines AG,
Obstgartenstrasse 25, CH-8302 Kloten

Functions in UBS
Member of the Governance and Nominating Committee / member of the Human Resources and Compensation Committee

Year of initial appointment: 2008

Professional history and education
Bruno Gehrig was elected to the BoD at the October 2008 EGM and is a member of the Governance and Nominating Committee and the Human Resources and Compensation Committee. From 2003 to 2009, Mr. Gehrig was Chairman of Swiss Life Holding. Between 1996 and 2003, he worked at the Swiss National Bank, starting as a member of the Governing Board and becoming Vice Chairman in 2000. From 1992 to 1996, he was a professor of banking and finance at the University of St. Gallen and concurrently served as a member of the Swiss Federal Banking Commission. Between 1989 and 1991, he held the position of CEO at Bank Cantrade AG. Mr. Gehrig worked for the former Union Bank of Switzerland (UBS) between 1981 and 1989, where he started as a chief economist before assuming responsibility for securities sales and trading. He studied economics at the University of Bern, where he completed his PhD studies, and then continued on to postgraduate studies at the University of Rochester, New York. He was an assistant professor at the University of Bern and received an honorary doctorate from the University of Rochester.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Gehrig is the Chairman of the board of Swiss International Air Lines and the Vice Chairman and Chairperson of the Remuneration Committee of Roche Holding Ltd., Basel.

Ann F. Godbehere
Canadian and British, born 14 April 1955
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Member of the Audit Committee / member of the Corporate Responsibility Committee

Year of initial appointment: 2009

Professional history and education
Ann F. Godbehere was elected to the BoD at the 2009 AGM and is a member of the Audit Committee and the Corporate Responsibility Committee. Ms. Godbehere was appointed CFO and Executive Director of Northern Rock in February 2008, serving in these roles during the initial phase of the business’ public ownership – she left at the end of January 2009. Prior to this role, she served as CFO of Swiss Re Group from 2003 to 2007. Ms. Godbehere was CFO of the Property and Casualty division in Zurich for two years, before this she served as CFO of the Life & Health division in London for three years. From 1997 to 1998, Ms. Godbehere was CEO of Swiss Re Life & Health in Canada. In 1996 and 1997, she was CFO of Swiss Re Life & Health North America. She is a certified general accountant, and in 2003, was made a fellow of the Certified General Accountants Association of Canada.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Ms. Godbehere is a board member and Chairperson of the Audit Committees of Prudential plc, Rio Tinto plc and Rio Tinto Limited in London. She is on the board of Atrium Underwriters Ltd. and Atrium Underwriting Group Ltd., London. She is also a member of the board and Chairperson of the Audit Committee of Ariel Holdings Ltd., Bermuda.

Axel P. Lehmann
Swiss, born 23 March 1959
Zurich Financial Services, Mythenquai 2, CH-8002 Zurich

Function in UBS
Member of the Risk Committee

Year of initial appointment: 2009

Professional history and education
Axel P. Lehmann was elected to the BoD at the 2009 AGM and is a member of the Risk Committee. He has been the Group Chief Risk Officer of Zurich Financial Services (Zurich) since January 2008, and was responsible for Group IT until 2010. In September 2004, Mr. Lehmann was appointed CEO of Zurich American Insurance Company and the North America Commercial business division in Schaumburg, Illinois. He became a member of Zurich’s Group Executive Committee and CEO of its Continental Europe business division in 2002, and subsequently was in charge, in 2004, of integrating UK, Ireland and South Africa in the newly created Europe General insurance business division. In 2001, he took over the responsibility for Northern, Central and Eastern Europe and was appointed CEO of the Zurich Group Germany. In 2000, Mr. Lehmann became a member of the Group Management Board where he was responsible for Group-wide business development functions. Before he joined Zurich in 1996, he was Head of Corporate Planning and Controlling for Swiss Life in Zurich. Mr. Lehmann was a lecturer at several universities and institutes. In 1990, he became Vice President of the Institute of Insurance Economics and the European Center at the University of St. Gallen, and was responsible for consulting and management development. He holds a PhD and a master’s degree in business administration and economics from the University of St. Gallen. He is a graduate of the Wharton Advanced Management Program and an honorary professor of business administration and service management at the University of St. Gallen.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Lehmann is Chairman of the board of the Institute of Insurance Economics at the University of St. Gallen and is Chairman of the Chief Risk Officer Forum.
**Wolfgang Mayrhuber**  
Austrian, born 22 March 1947  
Deutsche Lufthansa AG,  
Flughafen Frankfurt am Main 302,  
D-60549 Frankfurt am Main  

**Functions in UBS**  
Member of the Corporate Responsibility Committee / member of the Human Resources and Compensation Committee  

**Year of initial appointment:** 2010

---

**Helmut Panke**  
German, born 31 August 1946  
BMW AG, Petuelring 130, D-80788 Munich  

**Functions in UBS**  
Member of the Risk Committee and as of 11 February 2011 ad-interim Chairperson of the Human Resources and Compensation Committee  

**Year of initial appointment:** 2004

---

**William G. Parrett**  
American (US), born 4 June 1945  
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich  

**Function in UBS**  
Chairperson of the Audit Committee  

**Year of initial appointment:** 2008

---

**Professional history and education**  
Wolfgang Mayrhuber was elected to the BoD at the 2010 AGM and is a member of the Corporate Responsibility Committee and the Human Resources and Compensation Committee. He was Chairman of the Executive Board and CEO of Deutsche Lufthansa AG from 2003 to 2010. In 2002, he was elected Deputy Chairman of the Executive Board, and in 2001, he was appointed to the Executive Board with responsibility for the passenger airline business. From 1994 to the end of 2000, he was Chairman of the Executive Board of the newly founded Lufthansa Technik AG. After holding a variety of management positions in the maintenance, repair and overhaul division, he was appointed Executive Vice President and Chief Operating Officer Technical in 1992. In 1970, he joined Lufthansa as an engineer at the engine overhaul facility in Hamburg. Mr. Mayrhuber studied mechanical engineering at the Technical College in Steyr, Austria, and at the Bloor Collegiate Institute in Canada, until 1965. In 1990, he completed an Executive Management Training course at the Massachusetts Institute of Technology.

**Other activities and functions**  
Mandates on boards of important corporations, organizations and foundations or interest groups:  
Mr. Mayrhuber is Chairman of the supervisory board and Chairperson of the Mediation Committee, the Nomination Committee and the Executive Committee of Infineon Technologies AG, as well as a member of the supervisory boards of Munich Re Group, BMW Group, Lufthansa Technik AG and Austrian Airlines AG. Furthermore, he serves on the board of SN Airholding SA/NV, Brussels, and HEICO Corporation, Hollywood, FL.

---

**Helmut Panke**  
German, born 31 August 1946  
BMW AG, Petuelring 130, D-80788 Munich  

**Functions in UBS**  
Member of the Risk Committee and as of 11 February 2011 ad-interim Chairperson of the Human Resources and Compensation Committee. Between 2002 and 2006, Mr. Panke was Chairman of the Board of Management at BMW. In 1982, he joined BMW's Research and Development division as Head of Planning and Controlling. He subsequently assumed management functions in corporate planning, organization and corporate strategy. Before his appointment as Chairman, he was a member of BMW's Board of Management from 1996. Between 1993 and 1996, he was Chairman and CEO of BMW Holding Corporation in the US. Mr. Panke graduated from the University of Munich with a PhD in physics, and was on special research assignment at the University of Munich and the Swiss Institute for Nuclear Research before joining McKinsey & Company in Dusseldorf and Munich as a consultant.

**Other activities and functions**  
Mandates on boards of important corporations, organizations and foundations or interest groups:  
Mr. Panke is a member of the board of Microsoft Corporation (Chairperson of the Antitrust Compliance Committee) and Singapore Airlines Ltd. He is a member of the supervisory board of Bayer AG.

---

**William G. Parrett**  
American (US), born 4 June 1945  
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich  

**Function in UBS**  
Chairperson of the Audit Committee  

**Year of initial appointment:** 2008

**Professional history and education**  
William G. Parrett was elected to the BoD at the October 2008 EGM and chairs the Audit Committee. Mr. Parrett served his entire career with Deloitte Touche Tohmatsu. He was CEO from 2003 until his retirement in 2007. Between 1999 and 2003, he was a Managing Partner of Deloitte & Touche USA LLP and served on Deloitte’s Global Executive Committee. Mr. Parrett founded Deloitte’s US National Financial Services Industry Group in 1995 and its Global Financial Services Industry Group in 1997, both of which he led as Chairman. In his 40 years of experience in professional services, Mr. Parrett served public, private, governmental, and state-owned clients worldwide. Mr. Parrett has a bachelor’s degree in accounting from St. Francis College, New York, and is a certified public accountant.

**Other activities and functions**  
Mandates on boards of important corporations, organizations and foundations or interest groups:  
Mr. Parrett is an independent Director of the Eastman Kodak Company, the Blackstone Group LP, and Thermo Fisher Scientific Inc., in all of which he chairs the Audit Committee. He is also the Immediate Past Chairman of the board of the United States Council for International Business and United Way Worldwide. He is a Carnegie Hall Board of Trustees member.
Elections and terms of office

In accordance with article 19 (paragraph one) of the Articles of Association, all BoD members are to be elected on an individual basis for a one-year term of office. As a result, shareholders must confirm the entire membership of the BoD on a yearly basis at the next AGM, which will take place on 28 April 2011.

BoD members are normally expected to serve for a minimum of three years. No BoD member should continue to serve beyond the AGM held in the calendar year following his or her 65th birthday; however, the BoD can extend this age limit.

Organizational principles and structure

The Organization Regulations were revised and are valid as of 1 August 2010. Major changes consisted of separating the roles of the Vice Chairman and the SID, integrating the requirements of the FINMA Circular 2010/1, and enhancing the approval authority of the BoD with regard to the cost of equity for UBS and its business divisions.

Following each AGM, the BoD meets to appoint its Chairman, Vice Chairman, SID, the BoD Committees members and their respective Chairpersons. At the same meeting, the BoD appoints a Company Secretary, who acts as secretary to the BoD and its Committees.

According to the Articles of Association, the BoD meets as often as business requires, but must meet at least six times a year. A total of 16 meetings were held in 2010, of which eight included GEB members and eight were without GEB participation. On average, 92% of BoD members were present at BoD meetings without GEB participation, and 96% at meetings with GEB participation. The duration of each meeting was four hours on average. In addition, the BoD met for a one-day BoD seminar.

At each BoD meeting, each Committee Chairperson provides the full BoD with regular updates on current activities of his or her Committee as well as important Committee issues.

At least once per year, the BoD reviews its own performance as well as the performance of each of its Committees. This review is based on an assessment of the BoD as conducted by the Governance and Nominating Committee (GNC), as well as a self-assessment of the BoD Committees, and seeks to determine whether the BoD and its Committees are functioning effectively and efficiently.

The following Committees assist the BoD in the performance of its responsibilities. These Committees and their charts are described in the Organization Regulations, which are published on www.ubs.com/governance.

Audit Committee

The Audit Committee (AC) comprises at least three independent BoD members, with all members having been determined by the BoD to be fully independent and financially literate. On 31 December 2010, the AC consisted of William G. Parrett, the Chairman, as well as Michel Demaré, Rainer-Marc Frey and Ann F. Godbehere. All members have accounting and financial management expertise and are considered to be “financial experts” according to the rules established by the US Sarbanes-Oxley Act of 2002.

The AC itself does not perform audits, but monitors the work of the auditors who in turn are responsible for auditing UBS’s and the Group’s financial statements and for reviewing the quarterly financial statements. The function of the AC is to serve as an independent and objective body with oversight of: (i) the Group’s accounting policies, financial reporting and disclosure controls and procedures, (ii) the quality, adequacy and scope of external audit, (iii) UBS’s compliance with financial reporting requirements, (iv) management’s approach to internal controls with respect to the production and integrity of the financial statements and disclosure of the financial performance, and (v) the performance of Group Internal Audit in conjunction with the Chairman and the Risk Committee (RC). For these purposes, the AC has the authority to meet with regulators and external bodies in consultation with the Group CEO.

The AC, together with the external auditors and Group Internal Audit reviews the annual and quarterly financial statements of UBS and the Group as proposed by management in order to recommend their approval, including any adjustments considered to be appropriate to the BoD.

Periodically, and at least annually, the AC assesses the qualifications, expertise, effectiveness, independence and performance of the external auditors and their lead audit partner, in order to support the BoD in reaching a decision on the appointment or removal of the external auditors and the rotation of the lead audit partner. The BoD then submits these proposals at the AGM.

During 2010, the AC held a total of six meetings and ten calls. The meetings had an average duration of three and a half hours and the calls lasted approximately 45 minutes. Participation at these events averaged 97%. Also present at the meetings were the Group CEO, the Group Chief Financial Officer (Group CFO), the Head of Group Internal Audit, the Head of Group Tax & Accounting Policy, the Head of Group Controlling & Accounting and Ernst & Young Ltd., Basel, (Ernst & Young), our external auditors. The calls were conducted in the presence of the AC members and a combination of the Group CFO, the Head of Group Tax & Accounting Policy and the Head of Group Controlling & Accounting. Joint AC/RC sessions are held every quarter. In addition, the AC held one session with FINMA.

The AC reports back to the BoD about its discussions with our external auditors. Once per year, the lead representatives of our external auditors present their long-form report to the BoD, as required by FINMA.

Corporate Responsibility Committee

The Corporate Responsibility Committee (CRC) supports the BoD in fulfilling its duty to safeguard and advance the Group’s reputation for responsible corporate conduct. It reviews and assesses stakeholder concerns and expectations for responsible corporate conduct and their possible consequences for UBS, and recommends appropriate actions to the BoD. The CRC comprises at least three independent BoD members and, on 31 December 2010,
Kaspar Villiger chaired the Committee with Sally Bott, Ann F. Godbehere and Wolfgang Mayrhuber as additional members. The CRC is advised and supported by a number of senior business representatives. It met twice for 70 minutes in 2010, and 88% of CRC members were present.

In 2010, the UBS Code of Business Conduct and Ethics (the Code) was revised and approved by the BoD and GEB. All employees were required to participate in a comprehensive online training session covering the content of the Code.

➔ Refer to the “Corporate responsibility” section of this report for more information

Governance and Nominating Committee
The GNC supports the BoD in fulfilling its duty to establish best practices in corporate governance across the Group; to conduct a BoD annual self-assessment; to establish and maintain a process for appointing new BoD members; and to manage the succession of the Chairman and the Group CEO. The GNC comprises three independent BoD members and, on 31 December 2010, Kaspar Villiger chaired the GNC with Sally Bott, Michel Demaré and Bruno Gehrig as additional members. In 2010, seven meetings were held with an average participation of 93% of members and a duration averaging one hour. No meeting was held with external advisors.

Human Resources and Compensation Committee
The HRCC is responsible for the following functions: (i) supporting the BoD in its duties to set guidelines on compensation and benefits, (ii) approving the total compensation for the Chairman and the non-independent BoD members, (iii) proposing, together with the Chairman, total individual compensation for the independent BoD members and Group CEO for approval by the BoD, (iv) proposing to the BoD for approval, upon the recommendation from the Group CEO, the total individual compensation for GEB members. The HRCC also reviews the compensation disclosure included in this report.

The HRCC comprises four independent BoD members and, on 31 December 2010, Sally Bott chaired the HRCC with Bruno Gehrig, Wolfgang Mayrhuber and Helmut Panke as additional members. In 2010, 10 meetings were held with an average participation of 88% of members and a duration of over 100 minutes. Of those meetings, nine were held with external advisors, the Chairman and the CEO. After Sally Bott’s resignation, effective as of 11 February 2011, Helmut Panke assumed responsibility as ad-interim Chairperson of the HRCC.

➔ Refer to the “Compensation governance” section of this report for more information on the Human Resources and Compensation Committee’s decision-making procedures

Risk Committee
The RC is responsible for overseeing and supporting the BoD in fulfilling its duty to supervise and set appropriate risk management and control principles in the area of (i) risk management and control, including credit, market, country and operational risks, (ii) treasury and capital management, including funding and liquidity, and (iii) balance sheet management, including in each case any consequential reputational risk. For these purposes, the RC receives all relevant information from the GEB and has the authority to meet with regulators and external bodies in consultation with the Group CEO.

The RC comprises four independent BoD members and, on 31 December 2010, David Sidwell chaired the RC with Rainer-Marc Frey, Axel P. Lehmann and Helmut Panke as additional members. During 2010, the RC held a total of nine meetings and three calls, with an average participation rate of 97% of members. The average meeting duration was over five and a half hours and the calls lasted over 50 minutes. The AC Chairperson regularly attends part or all of the meetings. Also present were the Chairman, the Group CEO, the Group CFO, the Group Chief Risk Officer (Group CRO), the Group General Counsel (Group GC), the co-CEOs of the Investment Bank, the Head of Group Internal Audit and Ernst & Young. In addition, two joint meetings between the RC and the HRCC were held to discuss factoring risk into the compensation framework. Annually, one session is held with the Governing Board of the SNB and one with FINMA. The RC Chairperson additionally met one time with the Financial Services Authority (FSA).

Roles and responsibilities of the Chairman of the Board of Directors
Kaspar Villiger, the Chairman, has entered into a full-time employment contract with UBS in connection with his service on the BoD.

The Chairman coordinates the tasks within the BoD, calls BoD meetings and sets their agendas. Under the leadership of the Chairman, the BoD decides on the strategy of the Group upon recommendation of the Group CEO, exercises the ultimate supervision over management and appoints all GEB members. The Chairman presides over all AGMs and EGMs, and works with the Committee Chairpersons to coordinate the work of all Committees. Together with the Group CEO, the Chairman is responsible for ensuring effective communication with shareholders and other stakeholders, including government officials, regulators and public organizations. This is in addition to establishing and maintaining a close working relationship with the Group CEO and the other GEB members, providing advice and support while respecting the fact that day-to-day management responsibility is delegated to the GEB.

Roles and responsibilities of the Vice Chairman and the Senior Independent Director
The BoD appoints a Vice Chairman and an SID. Both the Vice Chairman and the SID must be independent. The Vice Chairman is required to lead the BoD in the absence of the Chairman as well as provide support and advice to the Chairman. At least twice a year, the SID organizes and leads a meeting of the independent BoD members without the presence of the Chairman. In 2010,
one independent BoD meeting was held for a duration of 60 minutes. A second meeting was scheduled to take place in December 2010, but was postponed until February 2011. The SID reports to the Chairman on the evaluation of the Chairman’s performance, and acts as a contact point for shareholders wishing to engage in discussions with an independent BoD member.

**Important business connections of independent members of the Board of Directors with UBS**

As a global financial services provider and a major bank in Switzerland, we have business relationships with many large companies, including those in which our BoD members assume management or independent board responsibilities. The nature of the relationships between UBS and companies whose chair, chief executive or other officer is a member of our BoD is not considered to compromise the BoD members’ capacity for independent judgment. Furthermore, no independent BoD member has personal business relationships with UBS that could compromise his or her independence.

All relationships and transactions with UBS BoD members and their affiliated companies are conducted in the ordinary course of business, and are on the same terms as those prevailing at the time for comparable transactions with non-affiliated persons.

**Checks and balances: Board of Directors and Group Executive Board**

We operate under a strict dual board structure, as mandated by Swiss banking law. The separation of responsibilities between the BoD and the GEB is clearly defined in the Organization Regulations. The BoD decides on the strategy of the Group upon recommendation of the Group CEO, and supervises and monitors the business, whereas the GEB, headed by the Group CEO, has executive management responsibility. The functions of Chairman of the BoD and Group CEO are assigned to two different people, thus ensuring a separation of power. This structure establishes checks and balances and preserves the institutional independence of the BoD from the day-to-day management of the firm, for which responsibility is delegated to the GEB under the leadership of the Group CEO. No member of one board may be a member of the other.

Supervision and control of the GEB remains with the BoD. The authorities and responsibilities of the two bodies are governed by the Articles of Association and the Organization Regulations, including the latter document’s “Annex B – Responsibilities and authorities”.

→ Refer to www.ubs.com/governance for more details on checks and balances for the BoD and GEB

**Transparency report**

On 14 October 2010, we published the “Transparency report to the shareholders of UBS”, which is a comprehensive review of the crisis we have faced in recent years. In publishing this report, the BoD was responding to the report published by the control Committee of the Swiss parliament in May 2010.

The report explains why UBS incurred losses during the financial crisis, particularly in connection with positions in the US real estate market. The report gives shareholders and interested members of the public an opportunity to gain a detailed picture of the events that took place. In addition, it sheds light on the problems in the cross-border wealth management business with US clients. The analysis is based on numerous internal and external investigations, the results of which are summarized in the report. The report further describes the wide ranging and significant changes made in order to prevent similar mistakes from recurring. Finally, the BoD presents the reasons for its decision to refrain from taking legal action against the former management.

The transparency report is supported by two reports from independent experts: the first by Prof. em. Dr. iur. Peter Forstmoser, LL.M., Attorney-at-law titled, “Statement of Opinion on the UBS AG Transparency Report of October 2010 and the Resolution by the UBS AG Board of Directors to Refrain from the Initiation of Liability Litigation” and the second by Dr. Tobias Straumann, University of Zurich titled, “The UBS Crisis in Historical Perspective”. The reports assess the events of recent years from, on the one hand, a legal perspective, and on the other hand, an economic and historic one.

→ Refer to www.ubs.com/transparencyreport for more information

**Information and control instruments vis-à-vis the Group Executive Board**

The BoD is kept informed of the activities of the GEB in various ways. The minutes of the GEB meetings are made available to the BoD members. At BoD meetings, the Group CEO and GEB members regularly update the BoD on important issues.

At BoD meetings, BoD members may request from BoD or GEB members any information about matters concerning UBS that they require to fulfill their duties. Outside meetings, BoD members may request information from other BoD and GEB members, in which case such requests must be approved by the Chairman.

Group Internal Audit independently, objectively and systematically assesses the adherence to our strategy, effectiveness of governance, risk management and control processes at Group, divisional and regional levels, and monitors compliance with legal, regulatory and statutory requirements, as well as with internal policies and contracts. This internal audit organization, which is independent from management, reports significant findings to the Chairman and the RC. The AC must be informed of the results of internal audits.

In February 2010, our internal compliance function provided an annual compliance report to the BoD. This report is required by sections 109 and 112 of the FINMA Circular 08/24 on the supervision and internal controls at banks.

→ Refer to the “Risk management and control” section of this report for more information
Group Executive Board

UBS operates under a strict dual board structure, as required by Swiss banking law. The management of the business is delegated by the BoD to the GEB.

Members of the Group Executive Board and changes in 2010

Lukas Gähwiler was named CEO of UBS Switzerland on 1 April 2010, replacing Francesco Morra who stepped down on that date.

As of 1 November 2010, Carsten Kengeter became sole Head of the Investment Bank. At the same time, Alexander Wilmot-Sitwell was appointed co-Chairman and co-CEO of Asia Pacific (APAC). Together with Chi-Won Yoon, he leads the APAC region.

John Cryan was appointed Chairman and CEO of UBS AG London Branch and UBS Limited in November 2010, as well as Chairman and CEO of UBS Group Europe, Middle East and Africa (EMEA) on an interim basis. Mr. Cryan took on these responsibilities in addition to his existing role as Group CFO.

On 22 October 2010, the BoD appointed Philip Lofts as CEO, UBS Group Americas, and Maureen Miskovic as Group CRO and GEB member. Robert Wolf asked to step down from the GEB at the end of 2010, but will remain in his role as Chairman of UBS Group Americas and President of the Investment Bank. He will focus full-time on client relationships and business transactions in the Americas. All three changes were effective as of 1 January 2011.

John Cryan will step down from his Group CFO position and from the GEB on 1 June 2011. On 3 December 2010, the BoD appointed Sergio Ermotti as Chairman and CEO of UBS Group EMEA and GEB member as of 1 April 2011, and Tom Naratil as Group CFO and GEB member as of 1 June 2011.

The following biographies provide information on the GEB members on 31 December 2010.

Oswald J. Grübel

German, born 23 November 1943

UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Function in UBS

Group CEO

Year of initial appointment: 2009

Professional history and education

Oswald J. Grübel was named Group Chief Executive Officer (Group CEO) and a member of the Group Executive Board (GEB) in February 2009. Before joining UBS, he was the CEO of Credit Suisse Group and Credit Suisse and stepped down from this role in May 2007. From 2002 to 2004, he was CEO of Credit Suisse Financial Services, and co-CEO of Credit Suisse Group from 2003 until 2004. Mr. Grübel was a member of the Group Executive Board of Credit Suisse from 1997 to 2001, and again from 2002 to 2007. From 1991 until 1997, he was a member of the Group Executive Board of Credit Suisse and was responsible for equities, fixed income, global foreign exchange, money markets and asset/liability management in Zurich.

Before that he was a member of the Financière Credit Suisse First Boston Group Executive Board in Zug. In 1970, Mr. Grübel joined White Weld Securities and became its CEO in 1975. From 1961 to 1970, he worked for Deutsche Bank where he completed his training as a banker.

Other activities and functions

Mandates on boards of important corporations, organizations and foundations or interest groups:

Mr. Grübel is a board member of the Swiss-American Chamber of Commerce, the Institute of International Finance and the Financial Services Forum. He is member of the International Monetary Conference.

John Cryan

British, born 16 December 1960

UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS

Group CFO

CEOs AG London Branch and UBS Limited

Chairman and CEO UBS Group Europe Middle East and Africa (EMEA) ad interim

Year of initial appointment: 2008

Professional history and education

John Cryan was appointed CEO of UBS AG London Branch and UBS Limited in November 2010 as well as Chairman and CEO of UBS Group Europe, Middle East and Africa (EMEA) on an interim basis. Mr. Cryan took on these responsibilities in addition to his existing role as Group CFO. He was appointed Group CFO and became a GEB member in September 2008. In 2002, he became the European Head of the Financial Institutions Group of the Investment Bank and three years later he was made its Global Head. A former employee of Arthur Andersen LLP, Mr. Cryan joined S.G. Warburg & Co. in London in 1987. Since 1992, he has specialized in providing strategic and financial advice to a wide range of companies in the financial services sector globally. Mr. Cryan graduated in 1981 with an MA with honors from the University of Cambridge.
Corporate governance and compensation

Corporate governance

Markus U. Diethelm
Swiss, born 22 October 1957
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Function in UBS
Group General Counsel

Year of initial appointment: 2008

Professional history and education
Markus U. Diethelm was appointed Group General Counsel of UBS and a GEB member in September 2008. From 1998 until 2008, he served as Group Chief Legal Officer at Swiss Re, and was appointed to its Group Executive Board in 2007. Prior to that, he was at the Los Angeles-based law firm Gibson, Dunn & Crutcher, and focused on corporate matters, securities transactions, litigation and regulatory investigations while working out of the firm’s Brussels and Paris offices. From 1989 until 1992, he practiced at Shearman & Sterling law firm in New York, specializing in mergers and acquisitions. In 1988, he worked at Paul, Weiss, Rifkind, Wharton & Garrison in New York, after starting his career in 1983 with Bär & Karrer.

Mr. Diethelm holds a law degree from the University of Zurich and a master’s degree and PhD from Stanford Law School. He is a qualified attorney-at-law admitted to the Zurich and New York State Bar Associations.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Diethelm is the Chairman of the Swiss-American Chamber of Commerce’s Legal Committee and member of the Swiss Advisory Council of the American Swiss Foundation.

John A. Fraser
Australian and British, born 8 August 1951
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Chairman and CEO Global Asset Management
Chairman UBS Saudi Arabia

Year of initial appointment: 2002

Professional history and education
John A. Fraser was appointed Chairman and CEO of the Global Asset Management business division in December 2001, and became a GEB member in July 2002. Since 2008, he has been the Chairman of UBS Saudi Arabia. Before 2001, he was President and Chief Operating Officer (COO) of UBS Asset Management and Head of Asia Pacific (APAC). From 1994 to 1998, he was the Executive Chairman and CEO of the Australia funds management business. Before joining UBS, Mr. Fraser spent over 20 years in various positions at the Australian Treasury, including two international postings in Washington D.C., first, at the International Monetary Fund and second, as Economic Minister at the Australian Embassy. He was the Deputy Secretary (Economic) of the Australian Treasury from 1990 to 1993. Mr. Fraser graduated from Monash University, Melbourne, in 1972, and holds a first-class honors degree in economics.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Fraser is a member of the President’s Advisory Council of the European Fund and Asset Management Association, a member of the Board of Governors of the Marymount International School at Kingston-upon-Thames in the UK and Chairman of the Victorian Funds Management Corporation, Melbourne.

Swiss, born 4 May 1965
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
CEO UBS Switzerland and co-CEO Wealth Management & Swiss Bank

Year of initial appointment: 2010

Professional history and education
Lukas Gähwiler became a GEB member in April 2010, and was appointed CEO of UBS Switzerland and co-CEO of Wealth Management & Swiss Bank. In his role as CEO of UBS Switzerland he is responsible for all businesses including retail and wealth management, corporate and institutional banking, investment banking and asset management in UBS’s home market. Before joining UBS, he held the position of Chief Credit Officer with Credit Suisse since 2003, and was accountable for the worldwide credit business of Private Banking, including Commercial Banking in Switzerland. In 1998, Mr. Gähwiler was appointed Chief of Staff to the CEO of the Credit Suisse Private and Corporate Business Unit. Previously, he held various front-office positions in Switzerland and North America. Mr. Gähwiler earned a bachelor’s degree in business administration from the University of Applied Sciences in St. Gallen. He completed an MBA program in corporate finance at the International Bankers School in New York, as well as the Advanced Management Program at Harvard Business School.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Gähwiler is a member of the boards of the Zurich Chamber of Commerce and the Opernhaus AG as well as Vice Chairman of the Swiss Finance Institute.
Corporate governance and compensation

Carsten Kengeter
German, born 31 March 1967
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Chairman and CEO Investment Bank

Year of initial appointment: 2009

Professional history and education
Carsten Kengeter was appointed Chairman and CEO of the Investment Bank in November 2010, after having been appointed its co-CEO in April 2009, when he became a GEB member. He joined UBS in December 2008, and served as the joint Global Head of Fixed Income, Currencies & Commodities (FICC) of the Investment Bank until January 2010. He has been on the Governing Board of UBS Limited since March 2009. Mr. Kengeter worked for Goldman Sachs as the co-Head of Asia (ex-Japan) Securities division in Hong Kong since 2006. In 2003, he co-headed the European FICC and Structured Equities Distribution in London, and in 2002, he became partner and Head of the FICC German Region in Frankfurt. In 2000, he was made Head of the European and Asian Collateralized Debt Obligation business in London, and before that he was in derivatives marketing in Frankfurt. From 1992 to 1997, Mr. Kengeter worked for Barclays de Zoete Wedd, and was responsible for setting up the credit derivatives trading desk. He graduated as Diplom-Betriebswirt from Fachhochschule Reutlingen, holds a bachelor's in business administration from Middlesex University and a finance and accounting MSc from the London School of Economics.

Ulrich Körner
German and Swiss, born 25 October 1962
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Group Chief Operating Officer and CEO Corporate Center

Year of initial appointment: 2009

Professional history and education
Ulrich Körner was appointed Group Chief Operating Officer (Group COO) and CEO Corporate Center, and was made a GEB member in April 2009. Mr. Körner was previously with Credit Suisse from 1998, and served as a member of the Credit Suisse Group Executive Board from 2003 to 2008, holding various management positions including CFO and COO. From 2006 to 2008 and before joining UBS, he was responsible for the entire Swiss client business as CEO of the Switzerland region. Mr. Körner received a PhD from the University of St. Gallen in business administration, and served several years as an auditor for Price Waterhouse and as a management consultant for McKinsey & Company.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Körner is Vice Chairman of the Committee of the Governing Board of the Swiss Bankers Association, Chairman of the Widder Hotel, Zurich, and Vice President of the board of Lyceum Alpinum Zuoz. He is Deputy Chairman of the Supervisory Board of UBS Deutschland AG, member of the Foundation Board of the UBS Pension Fund, member of the Financial Service Chapter Board of the Swiss-American Chamber of Commerce and member of the advisory board of the Department of Banking and Finance at the University of Zurich.

Philip Lofts
British, born 9 April 1962
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Function in UBS
Group CRO until 31 December 2010
CEO UBS Group Americas as of 1 January 2011

Year of initial appointment: 2008

Professional history and education
Philip J. Lofts was appointed CEO of UBS Group Americas in January 2011. He became a GEB member in November 2008. From 2008 until 2010, he was Group Chief Risk Officer (Group CRO). He has been with UBS for over 20 years. In 2008, he became the Group Risk COO after having previously been the Group Chief Credit Officer for three years. Before this, Mr. Lofts worked for the Investment Bank in a number of business and risk control positions in Europe, APAC and the US. He successfully completed his A-levels at Cranbrook School. From 1981 to 1984, he was a trainee at Charterhouse Japhet plc, a merchant bank acquired by the Royal Bank of Scotland in 1985.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Lofts is a board member of the University of Connecticut Foundation.

### Professional history and education
- **Robert J. McCann** was appointed CEO of Wealth Management Americas and became a GEB member in October 2009. Before joining UBS, he worked for Merrill Lynch & Co. as Vice Chairman and President of the Global Wealth Management Group. In 2003, he served as Vice Chairman of Distribution and Marketing for AXA Financial. He started his career with Merrill Lynch in 1982, working in various positions in capital markets and research. From 1998 to 2000, he was the Global Head of Global Institutional Debt and Equity Sales. In 2000, he became the COO of Global Markets and Investment Banking, and from 2001 to 2003, he was the Head of Global Securities Research and Economics. Mr. McCann graduated with a bachelor’s in economics from Bethany College, West Virginia. He holds an MBA from Texas Christian University.
- **Alexander Wilmot-Sitwell** was appointed co-Chairman and co-CEO of UBS Group APAC in November 2010. He became a GEB member in February 2008. From 2009 to 2010, he served as co-CEO of the Investment Bank, and from 2005 to 2009 as the joint Global Head of Investment Banking. From 2008 to 2010, he was Chairman and CEO of UBS Group EMEA. He joined the firm in 1996 as the Head of Corporate Finance in South Africa and moved to London in 1998 as Head of UK Investment Banking. Mr. Wilmot-Sitwell previously worked for Warburg Dillon Read and served as the Head of Corporate Finance at SBC Warburg in South Africa. Mr. Wilmot-Sitwell graduated from Bristol University with a degree in modern history.
- **Robert Wolf** was appointed President of the Investment Bank in 2007. He was Chairman and CEO of UBS Group Americas and was a GEB member from March 2008 until the end of 2010. Since January 2011 he has been the Chairman of UBS Group Americas. He was COO of the Investment Bank from 2004 to 2008. Prior to that, Mr. Wolf served as the Global Head of Fixed Income from 2002 to 2004, and previously as Global Head of Credit Trading, Research and Distribution. He joined Union Bank of Switzerland (UBS) in 1994, after spending approximately 10 years at Salomon Brothers in fixed income. In 1984, Mr. Wolf graduated from the Wharton School of the University of Pennsylvania with a degree in economics.

### Other activities and functions
- **Robert J. McCann** is a board member of the American Ireland Fund, and is Vice Chairman of the Bethany College Board of Trustees. He is a member of the No Greater Sacrifice Advisory Board, Washington D.C.
- **Alexander Wilmot-Sitwell** is Vice President of the Save the Children Fund, London.
- **Robert Wolf** is a member of President Obama’s Economic Recovery Advisory Board. He is a member of the Undergraduate Executive Board of the Wharton School, the University of Pennsylvania Athletics Board of Overseers, and the Financial Services Round Table. Mr. Wolf is also a member of the Council on Foreign Relations and the Committee Encouraging Corporate Philanthropy. He is on the board and in the Leadership Council of the Multiple Myeloma Research Foundation. He serves on the board of the Children’s Aid Society, New York, the Partnership New York City, and the Robert F. Kennedy Center for Justice & Human Rights Leadership Council.
Chi-Won Yoon
Korean, born 2 June 1959
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
Co-Chairman and co-CEO UBS Group APAC

Year of initial appointment: 2009

Professional history and education
Chi-Won Yoon is co-Chairman and co-CEO of UBS Group APAC. From June 2009 to November 2010, he served as sole Chairman and CEO of UBS AG, APAC and is a GEB member since June 2009. Prior to his current role, Mr. Yoon served as Head of UBS’s securities business in APAC: Asia Equities which he oversaw since 2004, and APAC FICC which he was brought in to lead in 2009. In 1997, when he first joined the firm, he served as Head of Equity Derivatives. Mr. Yoon began his career in financial services in 1986, working first at Merrill Lynch in New York and then at Lehman Brothers in New York and Hong Kong. Before embarking on a Wall Street career, Mr. Yoon worked as an electrical engineer in satellite communications. In 1982, Mr. Yoon earned a bachelor’s degree in electrical engineering from the Massachusetts Institute of Technology (MIT), and in 1986, a master’s degree in management from MIT’s Sloan School of Management.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Yoon is on the Asian Executive Board of MIT’s Sloan School of Management.

Jürg Zeltner
Swiss, born 4 May 1967
UBS AG, Bahnhofstrasse 45, CH-8098 Zurich

Functions in UBS
CEO UBS Wealth Management and co-CEO Wealth Management & Swiss Bank

Year of initial appointment: 2009

Professional history and education
Jürg Zeltner was appointed CEO UBS Wealth Management and co-CEO of Wealth Management & Swiss Bank, and became a GEB member in February 2009. In November 2007, he was appointed Head of Wealth Management North, East & Central Europe. From 2005 to 2007, he was CEO of UBS Deutschland, Frankfurt, and prior to that, he held various management positions in the former Wealth Management division of UBS. Between 1987 and 1998, Mr. Zeltner was with SBC in various roles within the Private and Corporate Client division in Berne, New York and Zurich. He graduated from the School of Economics and Business Administration in Berne, and completed the Advanced Management Program at Harvard Business School.

Other activities and functions
Mandates on boards of important corporations, organizations and foundations or interest groups:
Mr. Zeltner is a board member of the German-Swiss Chamber of Commerce and the UBS Optimus Foundation.

Responsibilities, authorities and organizational principles of the Group Executive Board
Under the leadership of the Group CEO, the GEB has executive management responsibility for the Group and its business. It assumes overall responsibility for the development of the Group and business division strategies and the implementation of approved strategies. The GEB constitutes itself as the risk council of the Group. In this function, the GEB has overall responsibility for establishing and supervising the implementation of risk management and control principles, for approving the core risk policies as proposed by the Group CRO, the Group CFO and the Group GC, as well as for controlling the risk profile of the Group as a whole as determined by the BoD and the RC. In 2010, the GEB held in total 20 meetings.

➔ Refer to the Organization Regulations, which are available at www.ubs.com/governance, for more information on the authorities of the GEB

Responsibilities and authorities of the Group Asset and Liability Management Committee
The Group ALCO, established by the GEB in 2009, is responsible for setting strategies to maximize the financial performance of the Group, and is subject to the guidelines, constraints and risk tolerances set by the BoD. The Group ALCO is also responsible for managing the balance sheet of the business divisions through allocation and monitoring of limits as well as managing liquidity, funding and capital, and promoting a one-firm financial management culture. The Organization Regulations additionally specify which powers of the GEB are delegated to the Group ALCO. In 2010, the Group ALCO held 10 meetings.

Management contracts
We have not entered into management contracts with any third parties.
Change of control and defense measures

We refrain from restrictions that would hinder developments initiated in, or supported by, the financial markets. We also do not have any specific defenses in place to prevent hostile takeovers.

**Duty to make an offer**

An investor who acquires more than 33\(\frac{1}{3}\)% of all voting rights (directly, indirectly or in concert with third parties), whether they are exercisable or not, is required to submit a takeover offer for all shares outstanding, according to Swiss stock exchange law. We have not elected to change or opt out of this rule.

**Clauses on change of control**

Neither the service agreement with the Chairman of the BoD, nor the employment contracts with the GEB members, contain change of control clauses.

All employment agreements with GEB members contain a notice period of six months, except for one which contains a 12-month notice period. During the notice period, GEB members are entitled to their salary and continuation of existing employment benefits.

In case of a change of control, the HRCC may, however, accelerate the vesting of restricted shares and amend the vesting date or lapse date of options for all employees.

According to the agreement we have entered into with the SNB, in connection with the transfer of certain illiquid and other positions to a fund owned and controlled by the SNB, in the event of a change in control of UBS, the SNB has the right, but not the obligation, to require that we purchase the loan the SNB provided to the fund at its outstanding principal amount plus accrued interest, and that we purchase the fund's equity at 50% of its value at the time.
Audit is an integral part of corporate governance. While safeguarding their independence, the external auditors closely coordinate their work with Group Internal Audit. The AC, and ultimately the BoD, supervises the effectiveness of audit work.

External, independent auditors

At the 2010 AGM, Ernst & Young were re-elected as principal auditors for the Group for a further one-year term of office. Ernst & Young assume virtually all auditing functions according to laws, regulatory requests and the Articles of Association. The Ernst & Young lead partner in charge of the UBS audit has been Jonathan Bourne since 2010 and his incumbency is limited to five years. Andreas Blumer has acted as the global engagement partner since 2004. He will be replaced in 2011 by Andreas Loetscher due to a seven-year rotation requirement. Ernst & Young will be proposed for reelection at the AGM in 2011.

At the 2009 AGM, BDO AG was appointed as special auditor for a three-year term of office. The special auditors provide audit opinions independently from the principal auditors in connection with capital increases.

Fees paid to external independent auditors

The fees (including expenses) paid to our principal auditors Ernst & Young, are set forth in the table below. In addition, Ernst & Young received CHF 33,206,000 in 2010 (CHF 37,030,000 in 2009) for services performed on behalf of our investment funds, many of which have independent fund boards or trustees.

Audit work includes all services necessary to perform the audit in accordance with applicable laws and generally accepted auditing standards, as well as other assurance services that conventionally only the principal auditor can provide. These include statutory and regulatory audits, attest services, and the review of documents to be filed with regulatory bodies.

Audit-related work comprises assurance and related services that traditionally are performed by the principal auditor, such as attest services related to financial reporting, internal control reviews, performance standard reviews, consultation concerning financial accounting and reporting standards and due diligence investigations on transactions in which we propose to engage.

Tax work involves services performed by professional staff in Ernst & Young’s tax division, and includes tax compliance, tax consultation and tax planning in respect to our own affairs.

“Other” services are approved on an exceptional basis only. They mainly comprise on-call advisory services; in addition, 2010 included non-recurring expenses.

Pre-approval procedures and policies

To ensure Ernst & Young’s independence, all services provided by them have to be pre-approved by the AC. A pre-approval may be granted either for a specific mandate, or in the form of a bucket pre-approval authorizing a limited and well-defined type and amount of services.

Fees paid to external auditors

UBS paid the following fees (including expenses) to its external auditors Ernst & Young Ltd.:

The AC has delegated pre-approval authority to its Chairperson; hence the Group CFO submits all proposals for services by Ernst & Young to the Chairperson of the AC for approval, unless there is a bucket pre-approval in place. At each quarterly meeting, the AC is informed of the approvals granted by its Chairperson and of services authorized under bucket pre-approvals.

**Group Internal Audit**

Group Internal Audit, with 313 personnel worldwide on 31 December 2010, performs the internal auditing function for the entire Group. Group Internal Audit supports the BoD and its Committees in discharging their governance responsibilities by independently assessing the effectiveness of our system of internal controls and our compliance with statutory, legal and regulatory requirements. All reports with key issues are provided to the Group CEO, the GEB members responsible for the business divisions and other responsible management. In addition, the Chairman of the BoD, the RC and the AC are regularly informed about important issues. Group Internal Audit closely cooperates with internal and external legal advisors and risk control units on investigations into major control issues.

To maximize its independence from management, the Head of Group Internal Audit, James P. Oates, reports directly to the Chairman of the BoD and to the RC. Group Internal Audit has unrestricted access to all accounts, books, records, systems, property and personnel, and must be provided with all information and data needed to fulfill its auditing duties. The RC may order special audits to be conducted. BoD members, BoD Committees or the Group CEO may submit requests for such audits to the RC.

Coordination and close cooperation with the external auditors enhance the efficiency of Group Internal Audit’s work.
We provide regular information to our shareholders and to the financial community.

We meet with institutional investors worldwide throughout the year, and regularly hold results presentations, special investor seminars, road shows, and individual and group meetings. Where possible, meetings involve senior management as well as members of the investor relations team. We make use of diverse technologies such as webcasting, audio links and cross-location videoconferencing to widen our audience and maintain contact with shareholders around the world.

Once a year, unless they explicitly choose not to, registered shareholders receive a summary of our annual report in the form of a review booklet. It provides an overview of the firm, our strategy as well as our activities during the year and some key financial information. Each quarter, shareholders are mailed a brief update on our quarterly financial performance. Shareholders can also request our complete financial reports, produced on a quarterly and annual basis, free of charge.

To ensure fair access to and dissemination of our financial information, we make our publications available to all shareholders at the same time.

- Refer to www.ubs.com/investors for a complete set of published reporting documents, the corporate calendar, access to webcasts and a selection of senior management industry conference presentations
- Refer to www.ubs.com/investors for future financial report publication dates

**Financial disclosure principles**

Based on discussions with analysts and investors, we believe that the market rewards companies that provide clear, consistent and informative disclosure about their business. Therefore, we aim to communicate our strategy and results in a manner that allows shareholders and investors to gain an understanding of how our company works, what our growth prospects are and what risks our strategy and results might entail. Feedback from analysts and investors is continually assessed and, where we consider appropriate, reflected in our quarterly and annual reports. To continue to achieve these goals, we apply the following principles in our financial reporting and disclosure:

- **Transparency** in disclosure enhances understanding of the economic drivers and builds trust and credibility.
- **Consistency** in disclosure within each reporting period and between reporting periods.
- **Simplicity** in disclosure allows readers to gain an understanding of the performance of our businesses.
- **Relevance** in disclosure avoids information overload by focusing on what is required by regulation or statute and is relevant to our stakeholders.
- **Best practice** in line with industry norms, leading the way to improved standards where possible.

**Financial reporting policies**

We report our results after the end of every quarter, including a breakdown of results by business division and extensive disclosures relating to credit and market risk.

Our financial statements are prepared according to IFRS as issued by the International Accounting Standards Board.

- Refer to “Note 1 Summary of significant accounting policies” in the “Financial information” section of this report for a detailed explanation of the basis of UBS’s accounting

We are committed to maintaining the transparency of our reported results and to ensuring that analysts and investors can make meaningful comparisons with previous periods. If there is a major reorganization of our business divisions, or if changes to accounting standards or interpretations lead to a material change in the Group’s reported results, our results are restated for previous periods when required by applicable accounting standards, to show how they would have been reported according to the new basis and provide clear explanations of all relevant changes.

**US regulatory disclosure requirements**

As a “foreign private issuer”, we must file reports and other information, including certain financial reports, with the US Securities and Exchange Commission (SEC) under the US federal securities laws. We file an annual report on Form 20-F, and submit our quarterly financial reports and other material information, including materials sent to shareholders in connection with AGMs and EGMs, under cover of Form 6-K to the SEC. These reports are all available at www.ubs.com/investors and also on the SEC’s website at www.sec.gov.
An evaluation was carried out under the supervision of management including the Group CEO and Group CFO, of the effectiveness of our disclosure controls and procedures (as defined in Rule 13a–15e) under the US Securities Exchange Act of 1934. Based upon that evaluation, the Group CEO and Group CFO concluded that our disclosure controls and procedures were effective as of 31 December 2010. No significant changes have been made in our internal controls or in other factors that could significantly affect these controls subsequent to the date of their evaluation.

In accordance with Section 404 of the US Sarbanes-Oxley Act of 2002, our management is responsible for establishing and maintaining adequate internal control over financial reporting. The financial statements of this report contain management’s assessment of the effectiveness of internal control over financial reporting, as of 31 December 2010. The external auditors’ report on this assessment is also included in this report.
Regulation and supervision

As a Swiss-registered company, our home country regulator and consolidated supervisor is FINMA. However, our operations are global and are therefore regulated and supervised by the relevant authorities in each of the jurisdictions in which we conduct business. The next sections describe the regulation and supervision of our business in Switzerland, our home market, and the regulatory and supervisory environments in the US and the UK, our next two largest areas of operations.

Regulation and supervision in Switzerland

Swiss Federal Legislation

We are regulated by the Swiss Federal Law relating to Banks and Savings Banks of 8 November 1934, as amended, and the related Implementing Ordinance of 17 May 1972, as amended, which are together known as the Federal Banking Law. Depending on the license obtained under this law, banks in Switzerland may engage in a full range of financial services activities, including commercial banking, investment banking and asset management. Banking groups may also engage in insurance activities, but these must be undertaken through a separate subsidiary. The Federal Banking Law establishes a framework for supervision by FINMA.

Switzerland implemented the internationally agreed capital adequacy rules of the Basel Capital Accord (Basel II) by means of the Capital Adequacy Ordinance of 29 September 2006, and subsequent FINMA circulars. Switzerland imposes a more differentiated and tighter regime than the internationally agreed rules, including more stringent risk weights. The revised decree on capital requirements issued at the end of 2008 increased the risk-based buffer and complemented it with a leverage ratio requirement, i.e. a minimum ratio of capital and balance sheet assets. On 1 January 2010, the FINMA Circular 2010/1 entered into force. In drawing up the FINMA Circular 2010/1, FINMA took into account the results of the consultation process and international developments, in particular the latest standards issued by the Financial Stability Board. In the course of 2010, the Swiss Federal Council and FINMA incorporated the Basel II enhancements issued by the Basel Committee on Banking Supervision on 13 July 2009 in the Capital Adequacy Ordinance and related circulars. The enhancements strengthen the Basel II rules governing trading book capital, and enhance the three pillars of the Basel II framework. The revised Capital Adequacy Ordinance, together with the FINMA circulars, entered into force on 1 January 2011.

→ Refer to the “Capital management” section of this report for more details about capital requirements, and to the “Regulatory developments” section of this report for more information on Basel III.

The Federal Act of 10 October 1997 on the Prevention of Money Laundering in the Financial Sector lays down a common standard for due diligence obligations for the whole financial sector, which must be met to prevent money laundering.

In our capacity as a securities broker, we are governed by the Swiss Stock Exchange Act. FINMA is the competent supervisory authority.

Regulation by the Swiss Financial Market Supervisory Authority

FINMA is strongly involved in the shaping of the legislative framework for banks, especially through the following mechanisms:

- FINMA has substantial influence on the drafting of Swiss federal acts and ordinances from the Federal Council or the parliament.
- On a more technical level, FINMA is empowered to issue its own ordinances and circulars.

→ Refer to the “Regulatory developments” section of this report for more information on the legislative framework.

Self-regulation by the SIX and the Swiss Bankers Association

Certain aspects of securities brokering, such as the organization of trading, are subject to self-regulation through the SIX, under the overall supervision of FINMA. Furthermore, we are also an issuer of listed shares subject to self-regulation by the SIX.

FINMA also officially endorses self-regulatory guidelines issued by the banking industry (through the Swiss Bankers Association), making them an integral part of banking regulation.

Two-tier system of supervision and direct supervision of UBS

Generally, supervision in Switzerland is based on a division of tasks between FINMA and a number of authorized audit firms. Under this two-tier supervisory system, FINMA has the responsibility for overall supervision and enforcement measures while the authorized audit firms carry out official duties on behalf of FINMA. The responsibility of external auditors encompasses the audit of financial statements, the reviewing of banks’ compliance with all prudential requirements and on-site audits.

Because of its importance to the Swiss financial system, UBS is directly supervised by dedicated teams at FINMA. The regime of direct supervision is regulated by the FINMA Circular 08/9 on the Supervision of Large Banking Groups. Supervisory tools include schedules of meetings with management and information exchange encompassing all control and business areas, independent assessments through review activities, and a regular exchange of views with internal audit functions, external auditors and important host supervisors.

We are directly supervised by the FINMA team “Supervision of UBS”, which is supported by teams specifically monitoring investment banking activities, risk management, and solvency and capital aspects.
Disclosures to the Swiss National Bank
While Switzerland’s banks are primarily supervised by FINMA, compliance with liquidity rules is also monitored by the SNB. A substantially revised liquidity regime for the Large Banking Groups entered into force on 30 June 2010. Furthermore, FINMA is entitled to share information with the SNB to enable the SNB to fulfill its obligations, namely with respect to financial stability. The SNB also takes a direct interest in the stress testing practice of UBS.
→ Refer to the “Liquidity and funding management” section of this report for more information on liquidity requirements

Regulation and supervision in the US

Banking regulation
Our operations in the US are subject to a variety of regulatory regimes. We maintain branches in several states including Connecticut, Illinois and New York. These branches are licensed either by the Office of the Comptroller of the Currency or the state banking authority of the state in which the branch is located. Each US branch is subject to regulation and examination by its licensing authority. We also maintain state and federally chartered trust companies and other limited purpose banks, which are regulated by state regulators or the Office of the Comptroller of the Currency. In addition, the Board of Governors of the Federal Reserve System exercises examination and regulatory authority over our state-licensed US branches. Only the deposits of our subsidiary bank located in the state of Utah are insured by the Federal Deposit Insurance Corporation. The regulation of our US branches and subsidiaries imposes restrictions on the activities of those branches and subsidiaries, as well as prudential restrictions, such as limits on extensions of credit to a single borrower, including UBS subsidiaries and affiliates.

The licensing authority of each US branch of UBS AG has the authority, in certain circumstances, to take possession of the business and property of UBS located in the state of the office it licenses. Such circumstances generally include violations of law, unsafe business practices and insolvency. As long as we maintain one or more federal branches, the Office of the Comptroller of the Currency also has the authority to take possession of the US operations of UBS under generally similar circumstances, as well as in the event that a judgment against a federally licensed branch remains unsatisfied, and this federal power may pre-empt the state insolvency regimes that would otherwise be applicable to our state-licensed branches. As a result, if the Office of the Comptroller of the Currency exercised its authority over the US branches of UBS, pursuant to federal law in the event of a UBS insolvency, all US assets of UBS would generally be applied first to satisfy creditors of these US branches as a group, and then made available for application pursuant to any Swiss insolvency proceeding.

In addition to the direct regulation of our US banking offices, because we operate US branches, we are subject to oversight regulation by the Board of Governors of the Federal Reserve System under various laws (including the International Banking Act of 1978 and the Bank Holding Company Act of 1956). On 10 April 2000, UBS was designated a “financial holding company” under the Bank Holding Company Act of 1956. Financial holding companies may engage in a broader spectrum of activities than bank holding companies or foreign banking organizations that are not financial holding companies, including underwriting and dealing in securities. To maintain our financial holding company status, (i) UBS, our US subsidiary federally chartered trust company and our US subsidiary bank located in Utah are required to meet certain capital ratios, (ii) our US branches, our US subsidiary federally chartered trust company, and our US subsidiary bank located in Utah are required to meet certain examination ratings, and (iii) our subsidiary bank in Utah is required to maintain a rating of at least “satisfactory” under the Community Reinvestment Act of 1997.

A major focus of US governmental policy relating to financial institutions in recent years has been aimed at fighting money laundering and terrorist financing. Regulations applicable to UBS and our subsidiaries impose obligations to maintain effective policies, procedures and controls to detect, prevent and report money laundering and terrorist financing and to verify the identity of their clients. Failure of a financial institution to maintain and implement adequate programs to combat money laundering and terrorist financing could have serious consequences for the firm, both in legal terms and in terms of our reputation.

A notable recent regulatory initiative is the Dodd-Frank Wall Street Reform and Consumer Protection Act, which impacts the financial services industry by addressing, among other issues, systemic risk oversight, bank capital standards, the liquidation of failing systemically significant financial institutions, OTC derivatives, the ability of deposit-taking banks to engage in proprietary trading activities and invest in hedge funds and private equity (the so-called Volcker rule), consumer and investor protection, hedge fund registration, securitization, investment advisors, shareholder “say on pay,” the role of credit-rating agencies, and more. The details of these regulations and their impact on UBS’s operations will depend on the final regulations ultimately adopted by various agencies and oversight boards in 2011.

US regulation of other US operations
In the US, UBS Securities LLC and UBS Financial Services Inc., as well as our other US-registered broker-dealer entities, are subject to regulations that cover all aspects of the securities business, including: sales methods; trade practices among broker-dealers; use and safekeeping of clients’ funds and securities; capital structure; record-keeping; the financing of clients’ purchases; and the conduct of directors, officers and employees.

These entities are regulated by a number of different government agencies and self-regulatory organizations, including the SEC and the Financial Industry Regulatory Authority (FINRA). Each such entity also is regulated by some or all of the NYSE, the Municipal Securities Rulemaking Board, the US Department of the Treasury, the Commodity Futures Trading Commission and other exchanges of which it may be a member, depending on the specific nature of the respective broker-dealer’s business. In addition, the US states, provinces and territories have local securities commissions that regulate and monitor activities in the interest of in-
vestor protection. These regulators have a variety of sanctions available, including the authority to conduct administrative proceedings that can result in censure, fines, the issuance of cease-and-desist orders or the suspension or expulsion of the broker-dealer or its directors, officers or employees.

FINRA is dedicated to investor protection and market integrity through effective and efficient regulation and complementary compliance and technology-based services. FINRA covers a broad spectrum of securities businesses, including: registering and educating industry participants; examining securities firms; writing rules; enforcing those rules and the federal securities laws; informing and educating the investing public; providing trade reporting and other industry utilities; and administering a dispute resolution forum for investors and registered firms. It also performs market regulation under contract for the NASDAQ Stock Market, the American Stock Exchange and the Chicago Climate Exchange.

Many of the provisions of the Dodd-Frank Act discussed above will affect the operation of these non-banking entities, as well as UBS’s US banking operations. Again, the impact of this statute on UBS’s operations will depend on the final regulations ultimately adopted by various agencies and oversight boards in 2011.

**Regulation and supervision in the UK**

Our operations in the UK are regulated by the FSA, which establishes a regime of rules and guidance governing all relevant aspects of financial services businesses.

The FSA has established a risk-based approach to supervision and has a wide variety of supervisory tools available to it, including regular risk assessments, on-site inspections (which may relate to an industry-wide theme or be firm-specific) and the ability to commission reports by skilled persons (who may be the firm’s auditors, IT specialists, lawyers or other consultants as appropriate). The FSA also has an extremely wide set of sanctions which it may impose under the Financial Services and Markets Act 2000, broadly similar to those available to US regulators.

Some of our subsidiaries and affiliates are also regulated by the London Stock Exchange and other UK securities and commodities exchanges of which we are a member. We are also subject to the requirements of the UK Panel on Takeovers and Mergers, where relevant.

Financial services regulation in the UK is conducted in accordance with European Union directives which require, among other things, compliance with certain capital adequacy standards, client protection requirements and conduct of business rules (such as the Markets in Financial Instruments Directive). These directives apply throughout the European Union and are reflected in the regulatory regimes of the various member states. The standards, rules and requirements established under these directives are broadly comparable in scope and purpose to the regulatory capital and client protection requirements imposed under applicable US law.

The UK government has committed to changing the current regulatory structures, including splitting responsibility for prudential regulation and conduct of business regulation and the replacement of the FSA with new regulatory bodies reporting to the Bank of England. Her Majesty’s Treasury has published a Consultation Paper and draft legislation is expected in early 2011.
Compliance with NYSE listing standards on corporate governance

As a Swiss company listed on the NYSE, we comply with the NYSE corporate governance standards for foreign private issuers.

**Independence of directors**

Based on the listing standards of the NYSE, our BoD has established specific criteria for defining the independence of our external members. Each external director has to personally confirm his or her compliance with the criteria, which are published on our website under [www.ubs.com/governance](http://www.ubs.com/governance).

All current external members have been confirmed by the BoD as having no material relationship with UBS, either directly or as a partner, controlling shareholder or executive officer of a company that has a relationship with UBS. Currently all BoD members are external, with the exception of the Chairman. Each of the external members has also met all the BoD and NYSE requirements with respect to independence.

The NYSE has more stringent independence requirements for members of audit committees. All four members of our AC are external BoD members who, in addition to satisfying the above criteria, do not receive, directly or indirectly, any consulting, advisory or other compensatory fees from UBS other than in their capacity as directors; do not hold, directly or indirectly, UBS shares in excess of 5% of the outstanding capital; and (except as noted below) do not serve on the audit committees of more than two other public companies. These members are Michel Demare, Rainer-Marc Frey, Ann F. Godbehere and William G. Parrett. The NYSE guidelines allow for an exemption for AC members to sit on more than three audit committees of public companies, provided that all BoD members determine that the candidate has the time and the availability to fulfill his or her obligations. Considering the credentials of William G. Parrett, and the fact that he has retired from his executive functions, the BoD has granted this exemption in his case.

**Board of Directors and its Committees**

We operate under a strict dual board structure mandated by Swiss banking law. No GEB member may also be a BoD member and vice versa. This structure ensures the institutional independence of the entire BoD from the day-to-day management. UBS has established Committees for the following BoD mandates: audit; human resources and compensation; governance and nominating; risk and corporate responsibility.

→ Refer to the “Board of Directors” section of this report for further information on these Committees including their mandates, responsibilities and authorities, as well as their activities during 2010.

In addition, the BoD appoints a Vice Chairman and an SID. Both the Vice Chairman and the SID must be independent. Michel Demare is the Vice Chairman and David Sidwell is the SID. Both assumed their role in April 2010. More details about the responsibilities and authorities of the Vice Chairman and the SID can be found in the Organization Regulations, which are published at [www.ubs.com/governance](http://www.ubs.com/governance).

The BoD has adopted Organization Regulations that constitute our corporate governance guidelines, which include all matters required by the NYSE rules. The BoD has also adopted the UBS Code of Business Conduct and Ethics (the Code). Both the Organization Regulations and the Code are available on our website at [www.ubs.com/governance](http://www.ubs.com/governance). In addition, the AC has established rules for the handling of complaints related to accounting and auditing matters, the internal policies on “Whistleblowing Protection for Employees” and “Compliance with Attorney Standards of Professional Conduct”.

**Differences from corporate governance standards relevant to US-listed companies**

According to the NYSE listing standards on corporate governance, foreign private issuers are required to disclose any significant ways in which their corporate governance practices differ from those to be followed by domestic companies.

Responsibility of the Audit Committee for appointment, compensation, retention and oversight of the independent auditors

The AC has been assigned all the abovementioned responsibilities, except for appointment of the independent auditors, which are elected by the shareholders as per Swiss company law. The AC assesses the performance and qualification of the external au-
tors and submits its proposal for appointment, re-appointment or removal to the full BoD, which brings its proposal to the shareholders for vote at the AGM.

Discussion of risk assessment and risk management policies by the Risk Committee
In accordance with our Organization Regulations, the RC has the authority to define our risk principles and risk capacity. The RC is responsible for monitoring our adherence to those risk principles and for monitoring whether business and control units run appropriate systems for the management and control of risks.

Assistance by the Risk Committee of the internal audit function
Both the Chairman and the RC have the responsibility for and authority to supervise the internal audit function.

Responsibility of the Human Resources and Compensation Committee for oversight of management and evaluation by the Board of Directors
Performance evaluations of our senior management, comprising the Group CEO and the GEB members, are completed by the Chairman and the HRCC and reported to the full BoD. All BoD Committees perform a self-assessment of their activities and report back to the full BoD. The BoD has direct responsibility and authority to evaluate its own performance, without preparation by a BoD Committee.

Proxy statement reports of the Audit and Human Resources and Compensation Committees
Under Swiss company law, all reports addressed to shareholders are provided and signed by the full BoD, which has ultimate responsibility vis-à-vis shareholders. The Committees submit their reports to the full BoD.

Shareholders’ votes on Equity Compensation Plans
Swiss company law authorizes the BoD to approve compensation plans. Though Swiss law does not allocate such authority to the AGM, it requires that Swiss companies determine capital in their articles of association and each increase of capital is required to be submitted for shareholders’ approval. This means that, if equity-based compensation plans result in a need for a capital increase, AGM approval is mandatory. If, however, shares for such plans are purchased in the market, shareholders do not have the authority to vote on their approval.
Compensation

Our foremost priority is to encourage and reward behavior that contributes to sustainable profitability and therefore the long-term success of our firm. In order to align employee incentives with the interests of our shareholders, we pay a significant part of our employees’ variable compensation in the form of deferred awards, mostly in UBS shares, which are subject to strict forfeiture rules.

Letter from the Human Resources and Compensation Committee of the Board of Directors

Dear shareholders,

In recent years, UBS has fundamentally reshaped its approach to compensation. Our priority remains to attract and retain talented professionals to enable us to further develop our business. At the same time, it is critical to encourage and reward behavior that contributes to sustainable profits. This is a fundamental prerequisite for the long-term success of our firm, which is in the best interests of our shareholders and other stakeholders.

During 2010, in collaboration with our regulators, we introduced measures to meet our main compensation objectives of better integrating risk within the compensation process and further aligning financial incentives with the long-term profitability of the firm. These measures include identifying our key risk-takers and controllers, individuals in our organization, who by the nature of their role, can materially commit or control the firm’s resources, and/or exert influence over the firm’s risk profile, and adopting appropriate measures regarding their compensation. We also made refinements to deferred compensation for certain other categories of employees.

Furthermore, in response to your concerns last year, we not only made a number of adjustments to our compensation model, outlined in detail below, but also worked to improve the related disclosure. This year’s report provides greater transparency, especially with regard to our compensation structure and plans.

Focus on long-term profitability
To align employee incentives with the long-term profitability of the firm, we pay a significant part of compensation in the form of deferred equity that can be forfeited or reduced if employees violate internal and external regulations or guidelines or behave in a way that causes financial and reputational harm. This is a central pillar of our compensation system.

For 2010, we raised the proportion of a Group Executive Board (GEB) member’s bonus paid in deferred equity from 50% to 60%, while at the same time reducing the portion of cash paid out immediately to a GEB member from 30% to 24%. As a result, at least 76% of a GEB member’s bonus, including part of the cash bonus, is deferred and at risk of forfeiture for up to five years. Apart from GEB members, approximately 8,000 employees across all of UBS’s business divisions receive bonuses in the form of deferred equity under the Equity Ownership Plan (EOP). Under this plan, 60% of their bonus is deferred as UBS shares over three years.

For 2010, the vesting of EOP awards for very senior and high-earning employees was made dependent on the profitability of the employee’s business division over the vesting period, or, in the case of Corporate Center employees, on the profitability of the UBS Group (Group) as a whole. We also introduced cash deferrals (for periods of up to three years) for Investment Bank employees whose total compensation exceeds CHF 1 million. Furthermore, we have reduced the use of leverage in our compensation plans.

Addressing risk in compensation decisions
While acknowledging that risk is a necessary and inherent part of our business, we are committed to ensuring that inappropriate risk-taking is not rewarded. The risks we take, along with those that emerge during the course of business, must be promptly recognized, measured, and effectively managed. Risk is a crucial consideration at every stage in the compensation process. Risk awareness, assessment and management are an important basis both for determining the overall bonus pool and for allocating individual bonuses. To fully consider all risk-related issues with regard to compensation, the Human Resources and Compensation Committee (HRCC) has
held two joint meetings over the last year with the Board of Directors’ (BoD) Risk Committee.

In a significant step toward strengthening our risk culture, and in line with regulatory guidance, we adopted stringent measures with regard to the performance assessment and compensation for risk-takers and controllers. Risk-takers are subject to an additional performance evaluation by the control functions, 60% of their bonus is deferred over three years and the vesting of their equity awards is subject to financial performance conditions.

**Striking the right balance**

In making UBS’s compensation decisions for 2010, the BoD and the GEB have carefully balanced all the relevant factors such as our improved business performance, industry compensation trends and regulatory requirements. From a shareholder’s perspective, it is essential to weigh the short-term potential for raising profitability against the long-term requirement to retain and attract key staff. Although our financial performance in 2010 was markedly better than in 2009, with an increase in profitability of CHF 10 billion, given the considerations outlined above, the bonus pool for 2010 was set at CHF 4,245 million, 11% lower than it was last year.

While we believe that our current compensation system strikes the balance we seek, and are confident that the approach we have established is the right one, going forward we will continue adapting it to meet our requirements and those of our stakeholders, including ensuring that it complies with all applicable rules and regulations. By maintaining a focus on risk management throughout our business and encouraging sustainable business conduct, we are convinced that we are well-placed to execute our business strategy and achieve our goals.

Helmut Panke
Ad-interim Chairman of the Human Resources and Compensation Committee of the Board of Directors
Corporate governance and compensation

Compensation governance

Our compensation governance principles include appropriate checks and balances and are designed to support long-term value creation. They have great strategic importance in shaping the direction and success of the firm, supporting its ability to attract and retain the best talent.

UBS’s corporate governance model complies with the applicable laws, rules and regulations, including the FINMA Circular 2010/1 that sets minimum standards for the design, implementation and disclosure of remuneration schemes at financial firms.

The BoD has the ultimate responsibility for approving the compensation strategy proposed by the HRCC, including compensation for GEB members. The HRCC is a separate BoD committee that determines the appropriate level of resources for compensation matters.

Human Resources and Compensation Committee

The HRCC is composed of four independent BoD members. On 31 December 2010, the members were Sally Bott, who chaired the committee, Bruno Gehrig, Wolfgang Mayrhuber and Helmut Panke. The committee held 10 meetings in 2010. Upon Sally Bott’s resignation from the BoD, effective 11 February 2011, Helmut Panke was appointed ad-interim Chairperson of the HRCC.

During the year, the HRCC received independent external advice from Hostettler, Kramarsch & Partner AG. Furthermore, market data was considered from Towers Watson and, in relation to the Performance Equity Plan, from PricewaterhouseCoopers.

Responsibilities and authorities of the HRCC

The HRCC reviews the Total Reward Principles annually and submits any amendments to the BoD for final approval. In addition, the HRCC:

- reviews and approves the design of the total compensation framework, including compensation strategy, programs and plans on behalf of the BoD;
- reviews variable compensation funding throughout the year on behalf of the BoD and proposes the final bonus pool to the BoD for approval; and
- together with the Group CEO, proposes base salaries and annual bonuses for GEB members to the BoD, which approves the total compensation of the GEB.

Compensation authorities

The BoD has the ultimate responsibility for approving the compensation strategy proposed by the HRCC, a separate committee that determines the appropriate level of resources for compensation matters.

1 Additional performance condition applies.
The responsibilities and authorities for compensation-related decisions, illustrated in the table, are set out in “Annex B – Responsibilities and authorities,” and “Annex C – Charter of the Committees of the Board of Directors of UBS AG” of the Organization Regulations of UBS AG (Organizational Regulations).

**Inclusion of the Risk Committee**

Compensation plans can have considerable influence in ensuring prudent and controlled risk-taking at financial institutions. In recognition of this fact, a key principle in the FINMA Circular 2010/1 is that a firm’s risk control functions and experts must be involved in designing and implementing compensation plans.

In line with this principle, the RC assumes an essential role in supporting the BoD to ensure that compensation plans are aligned with UBS’s business strategy, and that policies are designed to enhance risk awareness. The RC supervises and sets appropriate risk management and control principles, including those relating to credit, market, country and operational risk; treasury and capital management; and balance sheet management. In doing so, it also examines the possibility of reputational risk.

The RC held two meetings with the HRCC in 2010. Helmut Panke also sits on the RC, thereby providing a valuable risk perspective in considering compensation-related issues.

Further changes to the Organizational Regulations have been approved regarding the RC mandate. This will expand the committee’s involvement with compensation issues to include receiving briefings from management regarding how risk has been factored into the compensation process and reviewing whether the risk-related aspects of the compensation process have been adhered to.

**Decision-making process for Group Executive Board member compensation**

One of the HRCC’s main responsibilities is to make recommendations for the actual amount of variable cash and equity compensation awarded to each GEB member for the 2010 performance year. These recommendations are submitted to the BoD for approval. This process relies on a detailed and balanced review, not only of the performance of the Group, but of the relevant business division and the impact of specific individuals. It considers Group and divisional performance information, including risk-adjusted profitability and other financial and non-financial factors such as leadership effectiveness, strategy execution and reputational impact. It also takes into account performance information from the businesses, initial compensation recommendations from the Group CEO, employment contract terms, and relevant laws and regulations, together with relevant market data, such as that relating to industry compensation trends.

**Shareholders’ advisory vote**

We value the opinions of our shareholders. As such, we will provide, as we have done the past two years, an opportunity for shareholders to express their views through an advisory vote on this compensation report at the AGM in April 2011. While such a vote is advisory in nature and not legally binding, we encourage our shareholders to participate in the vote as we regard it as a meaningful way of involving them in the compensation discussion and take its outcome seriously. Shareholders also have the opportunity to raise questions at the AGM, and can address their questions about compensation or related issues at any time to BoD members by contacting the Company Secretary. Contact details are provided at the beginning of this report.

In addition to the advisory vote held at our AGM, UBS also holds separate meetings with key investors and proxy advisors on a regular basis to respond to questions that they might have, including those relating to compensation issues.
Total Reward Principles

Our approach to compensation is underpinned by what we call our “Total Reward Principles.” They establish a framework for integrating risk control and managing performance. At the same time, they specify how we structure compensation and the necessary bonus pool funding, that is, the amount of funds available in a given year for the payment of bonuses. They reflect our longstanding focus on pay for performance, sustained profitability, sound governance and strong risk awareness, and build on the UBS strategy of enhancing the firm’s reputation, increasing client focus and teamwork, and improving integration and execution. At the same time, they give full effect to the relevant regulatory requirements.

The Total Reward Principles were broadly revised in September 2009 to support our new business strategy and to reflect new regulatory developments. We remain fully committed to these principles. As such, they were reaffirmed by the HRCC in September 2010. Over the course of the year, we took further measures to implement these principles to ensure that our main performance and compensation objectives are achieved and that the governance and processes with respect to compensation are firmly in place.

**Total Reward Principles**
The four Total Reward Principles establish a framework that integrates risk control and performance. They also specify how we structure compensation and provide necessary funding.

**Align reward with sustainable performance**
Throughout UBS, sustainable performance is a key factor in determining compensation. Our assessment of performance goes beyond whether financial objectives have been achieved and takes into account the long-term risk impact of employee actions.

Variable compensation funding is primarily based on risk-adjusted profitability, that is, a measure of profitability adjusted to consider risk associated with particular transactions. This performance metric, which takes into account the cost of capital, not only supports our own internal objectives and business strategy, but also meets regulatory standards.

Our framework is flexible and enables members of management to apply their individual judgment and discretion. Adjustments may be made based on considerations relating to risk, quality and reliability of earnings, relative industry performance, future strategic plans, and market competitiveness. Progress against business performance targets and the foregoing considerations that affect annual variable compensation funding is regularly reviewed and monitored by the divisional Chief Executive Officers, the Group CEO and the HRCC. The proposed bonus pool is approved by the BoD. Risk control functions are also involved in the reviews of certain senior employees to ensure that any related-risk issues are fully considered.

→ Refer to the “Compensation Governance” section for more information about responsibilities and authorities for compensation-related decisions

**Support appropriate and controlled risk-taking**

Our compensation system provides incentives that take specific account of risk. Our performance reviews recognize that different businesses have different risk profiles, and that additional factors should be considered, including the fact that earnings may vary in quality over time. All employees are expected to demonstrate an appropriate understanding of the nature of their business and its associated risks, to consider their actions in light of UBS’s reputation and risk appetite, and to accept responsibility for all risks that arise, which includes taking steps to manage and mitigate them.

To keep our employees focused on the long-term profitability of the firm, we require that a significant part of an employee’s bonus be deferred for up to three years if his or her total compensation exceeds a certain threshold. In the case of GEB members, we re-
quire deferral of up to five years. The deferred portion will be forfeited in certain cases, including if an employee acts contrary to the firm’s interests during the deferral period by contributing to significant financial losses or restatements, causing reputational harm, or breaching risk policy, legal or regulatory requirements, all of which constitute “harmful acts”.

To monitor risk effectively, control functions, primarily Legal & Compliance, Risk Control, Finance and Operational Risk, must be able to carry out their work independently. As such, compensation for these functions is determined independently from the revenue producers that they oversee, supervise or support.

As previously mentioned, in 2010 we took a significant step forward in strengthening our risk culture by identifying the risk-takers and controllers (risk-takers) in our organization, based on specific regulatory guidance, and adopting specific measures regarding their compensation. Risk-takers are the most senior members of management, together with selected individuals who, by the nature of their role, have been determined to be able to materially commit or control the firm’s resources and/or exert significant influence over its risk profile, whether they are in front office, control or logistics functions (e.g. Supply and Demand Management, IT and Human Resources). The deferral rate of 60% under the Equity Ownership Plan is applied to their annual bonus, with this portion being deferred over three years. Moreover, the vesting of this deferred portion of their bonus is contingent on the profitability of the business division in which they work, or, in the case of Corporate Center employees, on the profitability of the Group as a whole. Due to the significant influence they exert, risk-takers are subject to an additional evaluation by the relevant control functions.

Foster effective individual performance management and communication

We evaluate performance rigorously to ensure that compensation is fairly and appropriately allocated. We base it not only on the contribution employees make to UBS’s business results, but also on whether they:
- observe our corporate values and principles;
- implement our strategy of enhancing reputation and improving integration and execution;
- demonstrate leadership when it comes to our clients, business, people and change;
- lead or support effective collaboration and teamwork;
- operate with a high level of integrity and in compliance with UBS policies;
- actively manage risk and strike an appropriate balance between risk and reward; and
- exhibit professional and ethical behavior.

To further reinforce the link between performance and pay, we adjusted how we assess and compensate our employees for 2010. They are now assessed not just absolutely against defined objectives, but also on a relative basis against their peers within UBS. This enables us to further differentiate performance, and consequently compensation, in a more objective, transparent and disciplined manner.

Attract and engage a diverse, talented workforce

Our need to attract and retain talented, competent employees underpins our compensation policies. We offer market-competitive compensation that strikes an appropriate balance between fixed and variable elements. Base salaries must be high enough to allow for a flexible policy when it comes to variable compensation. Our variable compensation encourages employees to perform and to be entrepreneurial, while at the same time placing an emphasis on strong risk awareness and measured risk-taking.

➔ Refer to the “Overview of our compensation model” section of this report for more information about our compensation system.
We benchmark our compensation and benefit levels against those of our peers. With respect to compensation for GEB members, we refer to a peer group of companies that are selected based on the comparability of their size, geographic and product and services scope, and staffing and pay strategy, among other factors. These companies, which are large European and US banks operating internationally, are our main competitors when it comes to hiring. They are: Bank of America, Barclays, Citigroup, Credit Suisse, Deutsche Bank, HSBC, JP Morgan Chase and Morgan Stanley.

In the view of the HRCC, our executive compensation structure is appropriate relative to our peer group. We review the peer group regularly to ensure that the firms that constitute it remain relevant benchmarks for our purposes.

As for compensation for other employees, given the diversity of our businesses, the companies we use as benchmarks vary with and are dependent on the relevant business divisions and locations, as well as the nature of the positions involved. For certain businesses or positions, we may take into account other major international banks, the large Swiss private banks, private equity firms, hedge funds and non-financial firms. Furthermore, we also benchmark employee compensation internally for comparable roles within and across business divisions and locations.

### Comparability assessment against main peers

Benchmarking ensures that our executive compensation is appropriate relative to our peer group. The key benchmarking criteria are summarized in the following table.

2. Size: impacts management complexity regardless of product and geographic scope. Expressed in terms of revenue, profitability, assets and employee base.
3. Product and services scope: impacts pay strategy, pay levels/approach and importantly, risk profile.
5. Headquarters location: is a key factor in determining peer group choices.
6. Competitors for talent: influences decisions relating to competitive requirements for pay structure and levels.
7. Regulatory environment: increasingly impacts pay structures (including deferral requirements) for executives.
8. Staffing and pay strategy: to identify peers with similar pay and staffing strategies.
Overview of our compensation model

Our compensation model is consistent with and supports our Total Reward Principles. It rewards appropriate risk-taking and behavior that produces sustainable results. To encourage employees to act with the long-term interests of the firm in mind, which also serves the best interests of our shareholders, we pay a significant part of our variable compensation in the form of equity that is deferred over several years.

All UBS employees

The total compensation employees receive has two elements: a fixed element, which is generally the base salary, and a discretionary variable element, which is the bonus. In determining employees’ pay, and in benchmarking pay both internally and externally, we focus on total compensation, rather than its individual elements, as it presents a more comprehensive picture of an employee’s pay.

The amount of bonus that an employee receives depends on various factors, including our overall performance, the performance of the employee's business division, and his or her individual performance both in absolute terms as well as relative to his or her peers.

We do not impose an absolute cap on total compensation or set a maximum multiple between the lowest and highest total compensation levels in our organization. To do so would undermine our commitment to providing market-competitive compensation. By not capping total compensation, we have the flexibility required to respond to different circumstances, such as changing business and market conditions or retention needs.

Base salary

The base salary reflects an employee's particular skill set, role and experience while taking market practices into consideration. Base salaries are fixed amounts of cash, typically paid monthly or semi-monthly. We review base salaries annually to ensure they remain competitive, comparing them with the relevant internal and external benchmarks.

Adjustments are made when there is a significant change in job responsibility. Furthermore, we make annual adjustments to base salaries that reflect performance and respond to movements in the marketplace.

Following our annual salary review, we have decided to increase base salaries for 2011, with effect from March 2011, by a total of CHF 350 million or 5% over the previous year. This compares with a base salary increase made for 2010 of approximately 4%. The increases for 2011 apply to employees whose responsibilities increased, who demonstrated strong performance and whose base salary fell short of the market standard. The increase also reflects a regulatory trend favoring a change in the industry compensation mix.

Compensation overview

A balanced mix of base and variable compensation rewards appropriate risk-taking and behavior that produces sustainable business results. A significant part of our compensation is paid in the form of deferred equity.

¹ The base salary of the Chairman of the BoD consists of cash and the right to receive a fixed number of shares. ² Bonuses granted to risk-takers and controllers are also based on an additional evaluation of these employees' performance, in which their risk-taking activities are specifically considered. ³ All employees with a total compensation of CHF/USD 250,000 or more are eligible. ⁴ Additional profitability performance condition for risk-takers and controllers, Group Managing Directors and other employees with total bonus > CHF/USD 2 million. ⁵ DCP replaces a part of the cash bonus for certain Investment Bank employees with additional cash deferrals. ⁶ At least 50% of their base fee is paid in blocked UBS shares.
**Bonus**

At UBS, bonuses are strongly tied to performance. We have reinforced the principle of “pay for performance” by introducing key changes in 2010 to our Core Cycle process, through which we manage performance and reward our employees. In principle, the majority of permanent employees may be considered for an annual discretionary bonus. The amount of bonus awarded depends on an individual’s performance and role, as well as the performance of the Group and the relevant business division. Hence, bonus levels can fluctuate significantly from year to year, such that it is possible that an individual receives no bonus in a given year.

➔ Refer to the “Our employees” section of this report for more information on the Core Cycle process

While employees have specific key performance indicators against which they are assessed that are relevant for the determination of bonuses, we do not assign weightings to specific performance indicators in determining an individual’s bonus.

At UBS, it is well-established practice to award part of the bonus in UBS shares deferred for up to three, or in the case of GEB members, five years. Over the deferral period, these deferred amounts are forfeited if employees commit harmful acts. For 2010, our deferral threshold remained unchanged: bonuses awarded to employees with a total compensation, that is, a base salary and bonus, of CHF 250,000 or more, are partially deferred. Above this level, employees receive a portion of their annual bonus in shares granted under the Equity Ownership Plan (EOP). Furthermore, we place a cap of CHF/USD 2 million on the amount that can be paid out immediately in cash.

For 2010, for employees across all business divisions and locations, the bonus was, on average, approximately 59% of the base salary. Among GEB members, it was, on average, 510% of a GEB member’s salary. As stated, bonuses are fully discretionary and we do not set a fixed ratio between the bonus and base salary. The ratios stated above are based on the size of the bonus pool for 2010.

➔ Refer to the discussion in the “Deferred variable compensation plans” section of this report for more information on the Core Cycle process

**Compensation for financial advisors in Wealth Management Americas**

In line with the market practice in the US for brokerage, the compensation system for financial advisors in Wealth Management Americas is based on commissions. The commissions, paid monthly, are based on revenue and other strategic performance measures and objectives. We adjust payout rates if financial advisors make repeated or significant client account or transaction errors. In addition to these commissions, advisors may also qualify for year-end awards, most of which are deferred over either a six- or ten-year period. The size of these awards may be based on length of service, the amount of net new money brought in, or the amount of revenue generated from Wealth Management-based services or products. For 2010, we paid a total of CHF 2,667 million in compensation to financial advisors in Wealth Management Americas.

**Other variable compensation**

In a few cases, we may offer additional incentives to support hiring or retention, particularly at senior levels. These include replacement payments to compensate employees for deferred awards forfeited as a result of joining UBS; guarantees, which are fixed incentives, either in cash or in equity awarded under a plan, paid regardless of future events, though in most cases tied to one or more performance conditions and limited to one year; sign-on payments, offered to important top-level candidates to increase the chances of their accepting an offer; and retention payments, made to key senior employees to induce them to stay, particularly during critical periods for the firm.

Employment contracts for those holding the rank of Director and above generally contain a notice period of between two and six months, depending on the location, which such employees must serve and during which time they are paid their base salary. We provide for severance payments in redundancy cases when employees are asked to leave as part of a retrenchment program or reduction in force. These are governed by location-specific severance policies. In the very exceptional cases that special pay-

---

**Severance and sign-on payments**

These payments were made to certain GEB members, Group Managing Directors (replacing the former Group Managing Board in February 2010), and to certain key risk-takers and controllers in 2010.

1 For the purpose of this table we consider replacement awards and guarantees as sign-on payments. 2 Includes sign-on payments agreed in 2010 and awards granted in 2010. Awards granted are included with their fair value at the date of grant.
Pensions and benefits
The main aim of pensions is to give employees and their dependents a level of security after their retirement or in the event of disability or death. While pension plans may vary across locations in accordance with local requirements, pension plan rules in any one location are generally the same for all employees in that location, including management.

→ Refer to “Note 30 Pension and other post-employment benefit plans” in the “Financial Information” section of this report for more information

As part of our efforts to attract and retain the best employees, our total compensation includes, in addition to a base salary and bonus, certain benefits such as health insurance and retirement benefits. These benefits vary depending on the location, but are competitive within each of the markets in which we operate.

Employee share purchase program
To enable our employees to invest in UBS and have a personal stake in the success of the firm, our employee share purchase program, the Equity Plus Plan, allows employees to contribute between 1%–30% of their base salary and/or 1%–35% of their bonus toward the purchase of UBS shares. All employees except those holding the rank of Managing Director and above are eligible to participate. Employees purchase UBS shares at market price, but receive one share for free for every three shares purchased through the program. These free shares vest after three years, with vesting subject to continued employment at UBS.

Risk-takers and controllers
Our risk-takers and controllers are a group of around 200 individuals who, by the nature of their role, have been determined to be able to materially commit or control the firm’s resources and/or exert significant influence over its risk profile, whether they are in the front office, logistics or control functions. Risk-taker activities are closely monitored, and risk-takers are subject to an additional level of performance evaluation by the control functions. Additionally, their compensation is adjusted to reflect the individual risks that they take, and a deferral rate of 60% is applied to their annual bonus granted under the applicable plans. Furthermore, the vesting of their deferred awards is contingent on the profitability of the business division in which they work, or, in the case of Corporate Center employees, on the profitability of the Group as a whole. Like all other employees, risk-takers also face forfeiture or reduction of the deferred portion of their compensation if they commit harmful acts.

→ Refer to the discussion “Support appropriate and controlled risk-taking” in the “Total Reward Principles” section of this report for more information

While we comply with the relevant Swiss Financial Market Supervisory Authority (FINMA) requirements regarding risk-takers, we are currently seeking guidance from regulators across the European Union regarding the implementation of the Capital Requirements Directive issued by the European Commission, which contains some rules relating to compensation. In the UK, for instance, the Financial Services Authority (FSA) has already issued a revised remuneration code. In line with guidance from the FSA, we have identified senior management and employees whose professional activities could have a material impact on the firm’s risk profile in the UK, so-called “Code staff”. Of the approximately 100 Code staff, about half are also part of our wider population of risk-takers and controllers. Code staff compensation is generally similar to those of risk-takers. However, due to specific FSA requirements, 50% of Code staff bonuses that are paid out immediately are delivered in shares. Furthermore, any shares granted to Code staff under the EOP for their performance in 2010 will be subject to an additional six-month blocking period upon vesting.

Group Executive Board

Bonus
GEB members receive a fixed salary. In addition, they are eligible to receive a bonus. While GEB bonuses are at the discretion of the BoD, they are strongly tied to the overall performance of the Group and dependent on the available bonus pool funding.

→ Refer to the discussion in the “Compensation funding and expenses” section of this report for more information

At least 76% of a GEB member’s bonus is deferred. Of the annual bonus, 40% is awarded in cash under the Cash Balance Plan (CBP): a maximum of 24% is paid out immediately, subject to a cash cap of CHF/USD 2 million. Vesting of the deferred cash portion is in equal installments over the following two years, with the amount vesting dependent on the return on equity achieved by the Group (Group RoE) in the financial year prior to vesting. The remaining 60% of a GEB member’s bonus is paid in equity, with 20% delivered under the Performance Equity Plan (PEP) and 40% under the Senior Executive Equity Ownership Plan (SEEO). CBP awards vest over two years, PEP awards after three years, and
2010 compensation framework for GEB members

Of the annual bonus, 40% is paid in cash and 60% in equity, and 76% of a GEB member’s bonus is deferred. For 2010, 40% of a GEB member's annual bonus was delivered under the SEEOP, a plan that has existed since 2003 but which has been updated over the years to include stricter forfeiture provisions and a performance condition that enables the firm to reduce awards when an individual’s business division is unprofitable. Part of the equity component of a GEB member’s bonus for 2009 was delivered under the Incentive Performance Plan (IPP), a one-time share plan introduced that year for senior employees to support the firm’s five-year strategic turnaround plan. The IPP has been discontinued this year, thereby reducing the use of leverage in our compensation system. Unlike the IPP, the SEEOP does not provide for upward adjustments to the number of shares delivered on vesting. The overall reduction in the leverage element in our compensation plans further discourages excessive risk-taking.

Share retention

To further align their interests with those of our shareholders, GEB members are required to retain long-term ownership of UBS shares. Each must hold a minimum of 200,000 shares, while the Group CEO is required to hold 300,000 shares. These shareholdings are to be built up within a maximum period of five years from the date a GEB member is appointed and must be retained for as long as he or she remains in office. The number of UBS shares held by each GEB member is determined by adding any vested or unvested shares to privately held shares.

1 Subject to possible change, dependent on plan rules.
2 Subject to cash cap of CHF/USD 2 million.
3 GEB members are required to hold a certain number of UBS shares as long as they are in office. This holding has to be built up within a maximum period of five years from the date of their appointment to the GEB.
Employment contract terms
Employment contracts for GEB members do not provide for “golden parachutes”, that is, special severance terms, including supplementary contributions to pension plans. The notice period in employment contracts for new GEB members was reduced in 2009 from 12 to six months to reflect changing industry practice, thereby reducing UBS’s contractual obligations to GEB members who leave, including our obligations with regard to their compensation. Under employment contracts for GEB members, any bonus paid up to the date of termination is fully discretionary, and based on Group, business division and personal performance during the period of employment. Any discretionary cash bonus will generally be awarded under the CBP. Vesting of deferred bonuses to GEB members is not accelerated when they leave the firm, although exceptions may be made in cases of death or disability.

Benefits
Benefits for GEB members are in line with local practices for all other employees.

Board of Directors
Chairman of the BoD
Since 2009, the Chairman of the BoD has received a fixed salary that consists of cash and the right to receive a fixed number of UBS shares that are blocked for four years. There is no variable or performance-related component in the Chairman’s compensation package. However, the share component ensures that his pay is aligned with the long-term performance of the firm. The Chairman’s employment contract does not provide for special severance terms, including supplementary contributions to pension plans.

The Chairman’s compensation is at the discretion of the HRCC, which conducts an annual assessment and takes into consideration pay levels for comparable roles outside of UBS.

Independent BoD members
Independent BoD members receive fixed base fees for their services in line with those of our peers globally, with 50% of their fees in cash and the other 50% in blocked UBS shares that are granted with a 15% discount and restricted from sale for four years. Alternatively, they may choose to have 100% of their compensation paid in blocked UBS shares. In addition, independent BoD members receive fees known as committee retainers dependent on their workload in serving on the firm’s various board committees. The Senior Independent Director and the Vice Chairman of the BoD receive an additional payment of CHF 250,000. In accordance with their role, independent BoD members do not receive bonuses or benefits.

Base fees received by independent BoD members are subject to an annual review: a proposal is submitted by the Chairman of the BoD to the HRCC, which then submits a recommendation to the full BoD.

➔ Refer to the “2010 compensation for the Group Executive Board and the Board of Directors” section of this report for more information
Deferred variable compensation plans

Apart from the need to attract talented and motivated professionals, the key focus in designing our variable compensation plans has been and continues to be on maintaining a close link between pay and long-term sustainable performance.

Under our present compensation model, all of our variable compensation plans feature *malus* (forfeiture) provisions. These provisions, which UBS was among the first in the industry to incorporate in its compensation system, require that a significant part of an employee's bonus be deferred over several years and enable the firm to forfeit the deferred portion if an employee commits certain harmful acts. As such, the firm maintains the right not to pay deferred awards, which allows us to meet our overriding objective of rewarding behavior that contributes to sustainable profitability and, conversely, to withdraw incentives in cases when employees act against the interests of the firm.

In 2010, we made a number of adjustments to keep pace with industry compensation trends. Significantly, 60% of the bonus that a GEB member receives is now in the form of deferred equity, compared with 50% last year. In the case of certain categories of employees, including GEB members, risk-takers and employees whose total bonus exceeds CHF/USD 2 million, the vesting of their deferred awards was made contingent on the profitability of the business division in which they work. This serves to ensure a direct connection between their pay and the long-term performance of their business. Besides this, employees in the Investment Bank whose compensation exceeds CHF 1 million are subject to cash deferrals (for up to three years), leading to a reduction in their immediate cash payout. We have also reduced the use of leverage with the discontinuation of the Incentive Performance Plan (IPP).

Overview of variable compensation plans

Compensation is closely linked to long-term sustainable performance. All of our variable compensation plans feature *malus* provisions. A substantial part of variable compensation is deferred and at risk of forfeiture for several years.

Variable compensation plans 2010

Cash Balance Plan (CBP)

Plan type – Deferred cash plans

Eligible employees: CBP awards are granted annually to GEB members.

Description: Generally, 40% of a GEB member’s annual bonus consists of cash awarded under the CBP. A maximum of 24% of the total bonus is paid out immediately, subject to a cap of CHF/USD 2 million. The balance is deferred and paid out in two equal installments over two years, subject to the performance condition described below.

The amount of cash delivered on vesting depends on the return on equity achieved by the Group during the vesting period. If the Group RoE is below 6%, no adjustment will be made to the amount of cash delivered upon vesting. If the Group RoE exceeds 6%, the unvested amount will be increased in line with the RoE achieved, though any such increase may not exceed 20%. If the Group RoE is negative, the unvested amount will be decreased accordingly, up to a maximum of 100%, and no vesting will occur in that given year.

Restrictions: The CBP contains malus provisions so that the deferred amount is partially or fully forfeited if a harmful act is committed. Even after a GEB member has left the firm, the deferred portion of the CBP award continues to be at risk of forfeiture. In addition, the award is forfeited if a GEB member voluntarily terminates his or her employment and joins another financial services organization.

Changes in 2010: The cap on the amount of cash that can be paid out immediately is set at CHF/USD 2 million. This was raised from the previous level of CHF/USD 1 million in line with industry practice.

Illustrative example for bonus of CHF 100 awarded under the CBP

Senior Executive Equity Ownership Plan (SEEOP)

Plan type – UBS share plans

Eligible employees: SEEOP awards are granted annually to GEB members.

Description: SEEOP awards are in the form of UBS shares that vest in equal installments over five years. The SEEOP is similar to the EOP, described below, but has a longer vesting period to reflect the additional level of commitment and long-term performance expected of GEB members.

Restrictions: SEEOP awards are subject to forfeiture in the event of a harmful act, if the business division to which a GEB member belongs makes a loss or if his or her employment is terminated voluntarily or for cause.

Changes in 2010: We introduced a performance condition for SEEOP awards, making the vesting of such awards contingent on the profitability of a GEB member’s business division, or, if the GEB member in question does not head a division, on the profitability of the Group as a whole. If the business division (or Group) suffers a loss in a given performance year, then the portion of the SEEOP award due to vest the following year will generally be reduced by 10%–50%, depending on the extent of the loss.

Illustrative example for bonus of CHF 100 awarded under the SEEOP
Performance Equity Plan (PEP)

**Plan type** – UBS share plans

**Eligible employees:** PEP awards are granted annually to GEB members.

**Description:** At the beginning of the three-year performance period, GEB members are granted a certain number of restricted performance shares. The actual number of UBS shares delivered at the end of the period can be between zero and two times the number of performance shares granted initially, depending on whether performance targets relating to economic profit (EP) and relative total shareholder return (TSR) have been achieved. EP is a measure of risk-adjusted profit that takes into account the cost of risk capital and is only realized when the entire return on capital that is achieved is higher than the firm’s cost of capital. TSR measures the total return of a share to an investor, that is, both capital appreciation of the share price and the dividend yield. We measure our TSR over a three-year period relative to the companies in the Dow Jones Bank Titans 30 Index, an index representing 30 leading companies in the global banks sector.

To determine the number of UBS shares delivered upon vesting, it is necessary to first determine the EP multiplier to be used, as well as the TSR multiplier. The EP multiplier changes in line with the level of three-year cumulative EP achieved. The TSR multiplier used depends on the relative ranking achieved by UBS among the companies in the Dow Jones Banks Titans 30 Index at the time of vesting. As was the case last year, a 100% multiplier will be applied if UBS is ranked 15th among the companies in the index. The EP multiplier may range from 50%–150% and the TSR multiplier may range from 50%–133%, but if both measures are below the lowest threshold no shares will vest.

Once the EP and TSR multipliers have been established, to calculate the number of shares delivered upon vesting:
- the EP multiplier is multiplied with the TSR multiplier; and
- the resulting figure is then multiplied with the number of performance shares granted initially.

**Illustrative example for bonus of CHF 100 awarded under the PEP**

<table>

<td></td>
<td></td>
</tr>
<tr>
<td>in equivalent number of PEP shares for the performance year 2010</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

All shares vest after three years. Final number of shares received depends on TSR and EP performance over the three-year performance period. Value of PEP award further depends on share price at vesting.

**Restrictions:** PEP awards are subject to forfeiture in the event of a harmful act or if employment has been terminated voluntarily or for cause.

**Changes in 2010:** No changes were made to the plan’s design. Performance targets are set annually.
**Equity Ownership Plan (EOP)**

**Plan type – UBS share plans/Equity Ownership Plan – fund linked**

**Eligible employees:** The EOP is a mandatory bonus deferral plan for all employees with a total compensation of CHF/USD 250,000 or more. In 2010, around 8,000 employees received EOP awards. These employees include risk-takers, Group Managing Directors (GMD) and employees whose total bonus exceeds CHF/USD 2 million. EOP awards are granted annually.

**Description:** Employees with a total compensation (that is, base salary and bonus) of CHF/USD 250,000 or more receive 60% of their bonus above that level in UBS shares that are deferred over three years under the EOP.

To align their compensation with the performance of the funds that they manage, Global Asset Management employees receive their EOP awards in the form of cash, the amount of which is dependent on the value of the relevant underlying Global Asset Management funds at the time of vesting. The vesting and forfeiture provisions of these awards are the same as for EOP awards made in the form of UBS shares.

**Restrictions:** EOP awards are subject to forfeiture in the event of a harmful act or if employment is terminated voluntarily or for cause.

EOP awards made to risk-takers, GMD and employees whose total bonus exceeds CHF/USD 2 million will only vest in full if the business division to which the employee belongs is profitable. If the business division incurs an operating loss in a given year, then the deferred portion of the EOP award due to vest in the following year will be partially forfeited. The amount forfeited depends on the extent of the loss and generally ranges from 10%–50% of the award portion due to vest. In the case of Corporate Center employees, their awards are conditional on the profitability of the Group as a whole.

**Changes in 2010:** We introduced a performance condition for awards granted to risk-takers, GMD and employees whose total bonus exceeds CHF/USD 2 million, making the vesting of their deferred awards contingent on the profitability of their respective business division, or, if such employees belong to the Corporate Center, on the profitability of the Group as a whole.

---

**Deferred Cash Plan (DCP)**

**Plan type – Deferred cash plans**

**Eligible employees:** DCP awards were granted to Investment Bank employees whose total compensation exceeds CHF 1 million.

**Description:** Although the mandatory bonus deferral plan (for total compensation above CHF/USD 250,000) or more applies to all employees, certain Investment Bank employees are subject to additional cash deferrals on the 40% cash component of their bonus. The DCP is a cash award denominated either in USD or CHF. It vests in equal installments in the three subsequent years following its grant. The CHF/USD 2 million cap on the amount of cash that can be paid out immediately applies.

**Restrictions:** DCP awards are subject to forfeiture in the event of a harmful act or if employment is terminated voluntarily or for cause.
Corporate governance and compensation

Compensation

Discontinued deferred compensation plans

The following table sets out the details of discontinued compensation plans, including those under which stock options, stock appreciation rights and other instruments were granted in the past. UBS has not granted any options since 2009. The strike price for stock options awarded under prior compensation plans has not been reset.

Compensation funding and expenses

How we determine our bonus pool

Each business division plans its bonus pool annually based on the funding framework and process that has been agreed by the HRCC. The “management pool” is the amount that a business division proposes to award its employees for their performance in a given performance year after consideration of all relevant factors. These proposed pools are submitted to the Group CEO and the HRCC for review, and approved by the full BoD. A detailed description of this process is provided below. By comparison, the expenses charged to the profit and loss account for any given year include compensation expense, that is, accruals, for bonuses awarded for the latest performance year recognized in the current year, as well as amortization of deferred awards granted in prior years, that is, prior awards that have not yet vested.

Profitability

Profitability is the main basis of our compensation funding framework. At business division level, this is measured as profit before tax and before bonus, adjusted for a cost of capital charge, thereby taking into consideration the cost of equity allocated to that business.

Bonus pool funding based on risk-adjusted profit supports the firm’s overall objective of sustainable profitability. At the same time, it is consistent with the regulatory requirements established by FINMA, the FSB and our other regulators.

Funding rates and initial bonus pools

We derive the initial divisional bonus pools by multiplying the so-called divisional compensation funding rate with the divisional adjusted contribution before bonus. In 2010, we introduced funding rates that are directly linked to the level of profitability in each division. As profits within a business division increase, the proportion of profits allocated for the payment of bonuses is lowered.

Our funding rate model or approach allows us to protect the firm in years of downturn or recovery by retaining key employees, while providing additional shareholder return in good years by preventing excessive capital usage for compensation. As such, we optimize shareholder return in the longer term by adapting our compensation funding in line with the profitability situation of our businesses.

Management discretion

While profitability is the main factor in determining the size of our bonus pool, and while we apply funding rates that provide an initial basis for determining divisional bonus pools, management may still apply its discretion and make adjustments to further assess the overall quality of earnings by looking at relevant key performance indicators and other qualitative measures, including risk factors. Furthermore, we recognize the strategic importance of maintaining a competitive position in the labor market, and may also make adjustments to variable compensation funding determined by competitive benchmarking. This involves studying our market position, both from a performance and a compensation perspective, together with industry compensation trends, including at senior management levels, based on a comparison among peer groups and across regions. Such management discretion is an important element of the funding framework, enabling us to achieve a balanced outcome that considers all the relevant factors.

Corporate Center employees are rewarded based on their individual performance, along with the performance and profitability of the Group as a whole. Compensation for control and logistics functions is determined independently. It is not based on the performance of the revenue producers these functions support, and is contained within the costs allocated to the business divisions.

Review and approval process

The proposed divisional bonus pools and the underlying contribution before bonus, together with other relevant performance indicators and input from Group Risk, are reported to the Group CEO. The HRCC reviews the rationale behind the divisional bonus pools.

Sustainable profitability is key to compensation funding

Primary basis for funding across UBS is profitability. The following describes the process by which we determine our bonus pools.
Business performance over the last two years

Our performance reflected an improvement of CHF 10 billion, with 2010 profit before tax of CHF 7,455 million compared with a loss of CHF 2,561 million in 2009.

UBS achieved a profit before tax of CHF 7,455 million in 2010, compared with a loss of CHF 2,561 million in 2009. The Investment Bank returned to profitability and contributed CHF 8,278 million to the CHF 10 billion improvement in UBS’s operating profit. UBS ended 2010 with an industry-leading BIS tier 1 capital ratio of 17.8%. Client confidence in our business is growing, as demonstrated by increased business volumes as well as improvements in net new money. We also continued to control our costs and achieved our CHF 20 billion fixed costs target for the year.

→ Refer to the “UBS business divisions and Corporate Center” section for more information on 2010 business division financial performance

It also considers performance indicators and risk factors specific to each business division when assessing performance and earnings quality, before recommending the size of the final bonus pool to the BoD.

At a business division level, each CEO proposes funding and allocation to the Group CEO, taking into account input from Group Risk. Performance against agreed indicators, both qualitative and quantitative, as well as risk factors specific to each business division, are considered when assessing performance and earnings quality.

Bonuses granted in 2010

Despite our improved performance in 2010, our bonus pool of CHF 4,245 million for 2010 is 11% lower than that for 2009, reflecting factors such as the market environment, our need to further improve our profitability, and our performance relative to the rest of the industry.

The following table shows the amount of bonus awarded to employees for the performance year 2010, together with the number of beneficiaries for each type of award granted. In the

case of deferred cash and share awards, the final amount paid to an employee is influenced by forfeiture provisions and any performance conditions to which these awards are subject. The deferred share award amount is based on the fair value of these awards at the date of grant.

The accounting adjustment column in the table shows the difference between the bonus amount granted to employees and the expensed fair value amount according to the IFRS 2 accounting standard. The relevant accounting rule provides for a discount to reflect that the fair value of shares that have vested for accounting purposes, but are still subject to sale or transfer restrictions, is lower than the market value of unrestricted shares. For example, an EOP award vests for accounting purposes immediately when an employee retires, while the shares remain blocked over the original vesting period. In this case, the expensed fair value of the blocked EOP award is lower than the current market value. Where a performance condition under the EOP applies, the expensed fair value also includes a discount reflecting the probability of forfeiture as a result of failing to meet the performance condition.

Total personnel expenses for 2010

The following table shows our total personnel expense for 2010, and includes salaries, pension and other personnel costs, social security contributions and variable compensation. Variable compensation includes discretionary cash bonuses paid in 2011 for the performance year 2010, the amortization of unvested deferred awards granted in previous years and the cost of deferred awards granted to employees who are eligible for retirement at the date of grant.

The bonus pool reflects the value of discretionary bonuses granted relating to the 2010 performance year, including awards that are paid out immediately and those that are deferred. To determine our variable compensation expense, several adjustments are required in order to reconcile the bonus pool to the accounting costs recognized in the Group’s financial statements prepared under IFRS:

- reduction for the unrecognized future amortization of unvested deferred awards granted in 2011 for the performance year 2010; and
- addition for the amortization of unvested deferred awards granted in previous years.

As an increasingly large part of compensation consists of deferred awards, the amortization of unvested deferred awards granted in previous years became a more significant part of the 2010 accounting costs, and will increase in 2011.

Refer to “Note 31 Equity participation and other compensation plans” in the “Financial information” section of this report for more information.
2010 compensation for the Group Executive Board and Board of Directors

Group Executive Board compensation

In 2010, total compensation for GEB members reflected the individual performance of each executive in the context of each business division’s improved operating performance, overall Group progress toward our medium-term strategic goals and the significant turnaround in the Group’s profitability. In setting compensation levels, the HRCC and the BoD also considered the collective achievements of the GEB in advancing our strategy, the relevant external competitive market and the firm’s relative performance.

In total, the compensation for GEB members in office on December 2010 was CHF 91.0 million, compared with a total of CHF 68.7 million in 2009. There were 13 GEB members on 31 December 2010, the same number as at the end of 2009. Aggregate compensation made to GEB members who stepped down in 2010 was CHF 3.3 million, compared with CHF 41.3 million in 2009. It should be noted that GEB employment contracts were revised between 2009 and 2010 to further limit UBS’s contractual obligations to GEB members who leave. The changes include reducing the notice period for new GEB members from 12 to six months, as well as making any bonus payments for the year in which a GEB member leaves on a fully discretionary, rather than pro rata, basis.

The highest paid GEB member in 2010 was Carsten Kengeter, with a total compensation of CHF 9.3 million. As shown in the table “Total compensation for all GEB members”, 88% of his bonus was deferred, with 28% in deferred cash and 60% in deferred equity vesting over three to five years.

Carsten Kengeter was appointed sole CEO of the Investment Bank in November 2010, having previously held this position jointly with Alexander Wilmot-Sitwell from January to October 2010. In 2010, the Investment Bank returned to profitability with a full-year profit before tax of CHF 2.2 billion, an improvement of CHF 8.3 billion as compared with 2009. Significant progress was made in positioning the Investment Bank for the future through rebuilding selected businesses in the Fixed Income Currencies and Commodities (FICC) business area, increasing the alignment between FICC and the leading Equities franchise, increasing market share in the advisory and capital markets activities and implementing an integrated, flow- and advisory-based client-centric business model. During 2010 residual risk positions were actively managed and reduced.

In 2010, the Group CEO, Oswald J. Grübel, was contractually entitled to a bonus, given the level of Group profitability achieved, the improvement in results over the previous year and the significant progress towards the Group’s medium-term strategic goals. As in 2009, the Group CEO decided to waive the bonus. His decision is based on what he believes is appropriate for the firm at this point in light of the further progress still required to reach the long-term goals set out in the firm’s overall strategy. His decision has been gratefully accepted and agreed to by the HRCC and the BoD.

Base salary
Base salaries are fixed for all GEB members and reviewed annually by the HRCC. Any adjustments are limited to significant changes in market rates or to movements in the foreign exchange (FX) rates relative to the Swiss franc. The HRCC decided not to change the Swiss franc amount for 2010, but adjusted the salary for GEB members who are paid in other currencies due to movements in FX rates.

Benefits
GEB benefits are in line with previous years.

Chairman of the Board of Directors
For 2010, the total compensation awarded to the Chairman of the BoD, Kaspar Villiger, was CHF 1,491,308. Our compensation framework provides for the Chairman to receive a base salary, 200,000 UBS shares, blocked for four years, as well as benefits in kind. Such shares are not designed or intended as variable compensation. Kaspar Villiger chose to waive a substantial part of the share award and instead to accept a limited number of 26,940 UBS shares with a fair value of CHF 500,000. In addition, he decided to maintain the voluntary reduction in his annual base salary from CHF 2 million to CHF 850,000. The HRCC gratefully accepted and agreed with Kaspar Villiger’s decision.

Highest paid BoD member
The Chairman of the BoD, Kaspar Villiger, is the highest paid BoD member, with total compensation of CHF 1,491,308.

Independent BoD members
The table “Remuneration details and additional information for independent BoD members” shows the compensation received by independent BoD members.
by independent BoD members between the 2010 and 2011 AGM. Fees for 2010 to 2011 remained unchanged.

Compensation for former BoD and GEB members

Compensation and benefits in kind paid to former BoD and GEB members amounted to CHF 77,722 for 2010 and reflect legacy agreements still honored by UBS. These benefits have been discontinued for any BoD and GEB member who stepped down after 1 January 2008.

Transactions in 2010

In accordance with the applicable rules and regulations, management transactions in UBS shares by BoD and GEB members are publicly disclosed. Transactions which require reporting are those involving all types of financial instruments whose price is primarily influenced by the price of UBS shares.

From 1 January until 31 December 2010, one share purchase was disclosed with a total value of CHF 1,501,830. Swiss stock exchange rules do not require disclosure of individual names of GEB or BoD members making such transactions.

UBS executives receive a substantial portion of their compensation in UBS equity-based awards. For this reason, management transactions generally see sales outweighing purchases. Blackout periods and synchronized dates for unblocking or vesting of shares or options granted as compensation may lead to transactions being concentrated in short time periods.

In addition, three BoD members chose to receive their full pay in UBS shares. These shares, representing a value of CHF 1,062,500, will be allocated in March 2011.

Loans

BoD and GEB members are granted loans, fixed advances and mortgages. Such loans were made in the ordinary course of business, on substantially the same terms as those granted to other employees, including interest rates and collateral, and did not involve more than the normal risk of collectability or contain other unfavorable features.

➔ Refer to “Note 32 Related parties” in the “Financial information” section of this report for information concerning loans granted to current and former executives

¹ Number and distribution of GEB members: 13 GEB members in office on 31 December 2010 and on 31 December 2009 respectively. ² Number and distribution of former GEB members for 2010 includes Francesco Moro (three months in office, including a notice period of six months), and 2009 includes Marcel Rohrer (two months in office), Walter H. Stützinger and Raoul Wel (three months in office), Jerker Johansson (four months in office), Romy Teyner (six months in office) and Marleen Hoekstra (10 months in office). ³ In 2010, for John Cryan, Carsten Kengeter and Alexander Wilmot-Sitwell, deferred cash includes blocked shares. ⁴ Included in the share awards are SEEOP awards at a fair value of GBP 4,655,950 and EOP awards at a fair value of GBP 1,594,250.

### Explanation of the tables outlining compensation details for GEB members and non-independent BoD members

a. Local currencies are converted into CHF using the exchange rates as detailed in Note 39 “Currency translation rates” in the “Financial information” section of this report.

b. Of the cash award, 60% is paid out immediately (representing 24% of a GEB member’s total annual bonus). The balance is paid out in equal installments of 20%, each over the subsequent two years, and is subject to forfeiture.

c. Value of each performance share at grant: CHF 18.70 for PEP awards granted in 2011 relating to the performance year 2010; CHF 16.30 for PEP awards granted in 2010 relating to the performance year 2009; and CHF 22.20 for IPP awards granted in 2010 relating to the performance year 2009. These values are based on valuations for accounting purposes which take into account the performance conditions and the range of possible outcomes for these conditions.

d. SEEOP is a pre-existing compensation plan that has been updated and re-introduced. SEEOP awards vest in equal installments over five years and are subject to forfeiture. The grant date accounting value per share granted under SEEOP in 2011 relating to the performance year 2010 at grant is CHF 18.43 or USD 19.94 (actual shares) and CHF 18.30 or USD 19.80 (notional shares).

e. Benefits in kind are all valued at market price, for example, health and welfare benefits and general expense allowances.

f. Swiss executives participate in the same pension plan as all other employees. Under this plan, UBS makes contributions to the plan, which covers compensation of up to CHF 820,800. The retirement benefits consist of a pension, a bridging pension and a one-off payout of accumulated capital. Employees must also contribute to the plan. This figure excludes the mandatory employer’s social security contributions (AHV, ALV), but includes the portion attributed to the employer’s portion of the legal BVG requirement. The employee contribution is included in the base salary and annual incentive award components.

In both the US and the UK, senior management participates in the same pension plans as all other employees. In the US, there are separate pension plans for Wealth Management Americas compared with the other business divisions. There are generally two different types of pension plans. The grandfathered plans, which are no longer open to new hires, operate (depending on the abovementioned distinction by business division) either on a cash balance basis or a career average salary basis. Participants accrue a pension based on their annual compensation limited to USD 250,000 (or USD 150,000 for Wealth Management Americas employees). The principal plans for new hires are defined contribution plans. In the defined contribution plans, UBS makes contributions to the plan based on compensation and limited to USD 245,000. US management may also participate in a 401(k) defined contribution plan (open to all employees), which provides a limited company matching contribution for employee contributions. In the UK, management participates in either the principal pension plan, which operates on a defined contribution basis and is limited to an earnings cap of GBP 100,000, or a grandfathered defined benefit plan which provides a pension upon retirement based on career average base salary (individual caps introduced as of 1 July 2010).

**Total 2010** 6,700,000

**Total 2009** 6,425,000

---

1 There were 10 independent BoD members in office on 31 December 2010. Wolfgang Mayrhuber was appointed at the AGM on 14 April 2010 and Sergio Marchionne and Peter Voser stepped down from the BoD at the AGM on 14 April 2010. There were 11 independent BoD members in office on 31 December 2009. Michel Demaré, Ann F. Godbehere and Axel P. Lehmann were appointed at the AGM on 15 April 2009 and Ernesto Bertarelli, Gabriele Kaufmann-Kohler and Jörg Walle stepped down from the BoD at the AGM on 15 April 2009.

2 Fees are paid 50% in cash and 50% in blocked UBS shares. However, independent BoD members can elect to have 100% of their remuneration paid in blocked UBS shares. For 2010, shares valued at CHF 18.56 (average price of UBS shares at SIX Swiss Exchange over the last 10 trading days of February 2011), included a price discount of 15%, for a new value of discount price CHF 15.78. These shares are blocked for four years. For 2009, shares valued at CHF 14.57 (average price of UBS shares at SIX Swiss Exchange over the last 10 trading days of February 2010), included a price discount of 15%, for a new value of discount price CHF 12.38. These shares are blocked for four years.

3 Number of shares is reduced in case of the 100% election to retirement benefits plans.

4 This payment is associated with the Vice Chairman or the SID function, respectively.

5 These shares are blocked for four years.

---

Introduction and accounting principles

The financial information section of UBS's Annual Report 2010 comprises: a) the critical accounting policies applied when preparing the consolidated financial statements of UBS Group, b) the audited consolidated financial statements of UBS Group (the "Financial Statements") for 2010, 2009 and 2008, prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB), c) the audited financial statements of UBS AG, the Parent Bank, for 2010 and 2009, prepared in order to meet Swiss regulatory requirements and in compliance with Swiss Federal Banking Law, and d) additional disclosures required under SEC regulations.

The basis of accounting of UBS's Group financial statements is described in Note 1 to the financial statements. Except where otherwise explicitly stated, all financial data are in Swiss francs (CHF), all financial information is presented on a consolidated basis under IFRS, and all references to "UBS" refer to the UBS Group and not to the Parent Bank. UBS AG, the Swiss Parent Bank, includes branches worldwide and owns all the UBS companies, directly or indirectly. All references to 2010, 2009 and 2008 refer to the UBS Group and the Parent Bank's fiscal years ended 31 December 2010, 2009 and 2008, respectively. The financial statements for the UBS Group and the Parent Bank have been audited by Ernst & Young Ltd.
Critical accounting policies

**Basis of preparation and selection of policies**

UBS prepares its Financial Statements in accordance with IFRS as issued by the International Accounting Standards Board. The application of certain of these accounting principles requires considerable judgment based upon estimates and assumptions that involve significant uncertainty at the time they are made. Estimates and judgments are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Changes in assumptions may have a significant impact on the Financial Statements in the periods where assumptions are changed. Accounting policies that are deemed critical to UBS’s results and financial position, in terms of materiality of the items to which the policy is applied, and which involve significant assumptions and estimates, are discussed in this section. A broader and more detailed description of the accounting policies that UBS employs is shown in Note 1 to the Financial Statements.

The application of assumptions and estimates means that any selection of different assumptions would cause the reported results to differ. UBS believes that the assumptions it has made are appropriate, and that UBS’s Financial Statements therefore present the financial position and results fairly in all material respects. The alternative outcomes discussed below are presented solely to assist the reader in understanding UBS’s Financial Statements. They are not intended to suggest that other assumptions would be more appropriate.

Many of the judgments that UBS makes when applying accounting principles depend on an assumption, which UBS believes to be correct, that UBS maintains sufficient liquidity to hold positions or investments until a particular trading strategy matures, i.e. that UBS does not need to realize positions at unfavorable prices in order to fund immediate cash needs.

**Fair value of financial instruments**

The fair values of financial instruments where no active market exists or where quoted prices are not otherwise available are determined by using valuation techniques. In these cases, the fair values are estimated using observable data in respect of similar financial instruments as well as models. Where market observable inputs are not available, inputs are estimated based on appropriate assumptions. Where valuation techniques or models are used to determine fair values, they are periodically reviewed and validated by qualified personnel independent of those who sourced them. Models are calibrated to ensure that outputs reflect actual data and comparable market prices. Where practicable, models use only observable data; however, areas such as default rates, volatilities and correlations require management to make estimates.

The valuation techniques or models employed may not fully reflect all of the factors relevant to the positions UBS holds. Valuations are therefore adjusted, where appropriate, to allow for additional factors including model risk, liquidity risk and credit risk. UBS uses different approaches to calculate the credit risk, depending on the classification of a financial instrument at fair value. A credit valuation adjustment (CVA) approach based on an expected exposure profile is used to adjust the fair value of Positive replacement values to reflect counterparty credit risk if deemed necessary. Correspondingly, a debit valuation adjustment (DVA) approach is applied to incorporate the own credit risk in the fair value of uncollateralized Negative replacement values. The own credit risk for Financial liabilities designated at fair value is calculated using the funds transfer price (FTP) curve.

As of 31 December 2010, financial assets and financial liabilities for which valuation techniques or models are used and whose inputs are observable (level 2) amounted to CHF 496 billion each. Financial assets and financial liabilities whose valuations include significant unobservable inputs (level 3) amounted to CHF 25 billion each.

Changes in assumptions for input factors would affect the reported fair value of financial instruments. If management had used reasonably possible alternative assumptions for UBS’s level 3 instruments accounted for at fair value through profit or loss, the fair value of cash instruments would have been up to CHF 0.6 billion higher or lower on 31 December 2010. Similarly, the fair value of derivative instruments would have been up to CHF 1.2 billion higher or lower than the amounts recognized on UBS’s balance sheet on 31 December 2010. Favorable valuation changes for assets would be offset to a significant degree by unfavorable changes in liabilities and vice versa, as a consistent use of different assumptions and estimates would prevent a simultaneous favorable or unfavorable valuation change of assets and liabilities.

The valuation of financial instruments is described in detail in Note 27.

**Goodwill impairment test**

Goodwill allocated to the Investment Bank on 31 December 2010 amounted to CHF 3.0 billion, to Wealth Management Americas CHF 3.3 billion, to Wealth Management CHF 1.4 billion and to Global Asset Management CHF 1.4 billion.

The recoverable amount is determined using a discounted cash flow model, which uses inputs that consider features of the banking business and its regulatory environment. The recoverable amount is calculated by estimating streams of earnings available to shareholders over the next five years, discounted to their present values. The terminal value reflecting all periods beyond the fifth year is calculated on the basis of the forecast of
fifth-year profit, the cost of equity and the long-term growth rate. For the 2010 test, the discount rates and long-term growth rates used to calculate the present values of the cash generating units remained unchanged. The recoverable amount of a segment is the sum of discounted earnings available to shareholders from the first five individually forecast years and the terminal value.

The carrying amount for each segment is determined by reference to the Equity Attribution framework. Within this framework, which is described in the Treasury management section of this report, management attributes equity to the businesses after considering their risk exposure, asset size, goodwill and intangible assets. Until the end of 2009, the carrying amount for each segment was determined by a roll-forward of the historic carrying amount. The change in methodology for determining the carrying amount of the cash-generating units from the roll-forward approach to the Equity Attribution framework was made in 2010 as the principles underlying the Equity Attribution framework were approved by the Board of Directors during the year. Moreover, the framework became embedded in the Bank for purposes of measuring the performance of each of its businesses. This new methodology is aligned with the 2010 business planning process, the inputs from which are used in calculating the recoverable amounts of the respective cash-generating units.

The same impairment test model is applied to all segments carrying goodwill. The model used to determine the recoverable amount is most sensitive to changes in the forecast earnings available to shareholders in years one to five, the cost of equity and to changes in the long-term growth rate. The applied long-term growth rate is based on real growth rates and expected inflation. Earnings available to shareholders are estimated based on forecast results, which take into account business initiatives and planned capital investments. Valuation parameters used within the Group's impairment test model are linked to external market information, where applicable.

On the basis of the impairment testing methodology described in Note 16 and Note 1a) 20), UBS concluded that the year-end 2010 balances of goodwill allocated to all its segments remain recoverable.

In addition, a stress test was performed employing the same discounted cash flow model. The earnings used were based on an economic stress scenario. The stressed values exceeded the carrying values of all business divisions, including the Investment Bank and Wealth Management Americas. However, if the regulatory pressure on the banking industry intensifies and conditions in the financial markets turn out to be worse than anticipated in UBS's performance forecasts, the goodwill carried in these business divisions may become impaired in future quarters.

**Impairment of loans and receivables measured at amortized cost**

Loan impairment allowances represent management’s best estimate of losses incurred in the lending portfolio at the balance sheet date. The loan portfolio, which is measured at amortized cost less impairment, consists of financial assets presented on the balance sheet line *Due from banks and Loans*, including reclassified securities. In addition, irrevocable loan commitments are also tested for impairment as described below.

Credit loss expense is recognized if there is objective evidence that the Group will be unable to collect all amounts due according to the original contractual terms or the equivalent value. A financial asset or group of financial assets is impaired only if a loss event occurred after the initial recognition of the financial asset(s), but not later than at the balance sheet date (“incurred loss model”). Management is required to exercise judgment in making assumptions and estimations when calculating impairment losses both on a counterparty-specific level and collectively.

The impairment loss is the difference between the carrying value of the financial asset and the estimated recoverable amount. The estimated recoverable amount is the present value, using the loan’s original effective interest rate (EIR), of expected future cash flows, including amounts that may result from restructuring or the liquidation of collateral. If a loan has a variable interest rate, the discount rate for measuring any impairment loss is the current EIR. An allowance for credit losses is reported as a reduction of the carrying value of the financial asset on the balance sheet.

**Reclassified and acquired securities:** UBS periodically revises its estimated cash flows associated with the portfolio of securities backed by multiple assets. Adverse revisions in cash flow estimates related to credit events are recognized in profit or loss as credit loss expenses. For reclassified securities, increases in estimated future cash receipts as a result of increased recoverability are recognized as an adjustment to the EIR on the loan from the date of change.

On 31 December 2010, UBS’s gross loan portfolio was CHF 264 billion; the related allowances amounted to CHF 1.1 billion. Impairment charges presented as net credit loss expense were CHF 66 million in 2010, of which CHF 172 million related to securities (reclassified and acquired).

UBS’s policy on allowances and provisions for credit losses is described in Note 1a) 11).

**Consolidation of Special Purpose Entities**

UBS sponsors the formation of Special Purpose Entities (SPEs) and interacts with non-sponsored SPEs for a variety of reasons, including to allow clients to obtain or be exposed to specific risk and reward profiles, to be provided funding or to sell or purchase credit risk. In accordance with IFRS, UBS does not consolidate SPEs that it does not control. In order to determine whether or not UBS controls an SPE, it evaluates a range of factors, including whether (a) the activities of the SPE are being conducted on UBS’s behalf according to its specific business needs so that UBS obtains the benefits from the SPE’s operations, or (b) UBS has decision-making powers to obtain the majority of the benefits of the activities of the SPE, or UBS has delegated these decision-making
powers by setting up an autopilot mechanism, or (c) UBS has the rights to obtain the majority of the benefits of the activities of an SPE and therefore may be exposed to risks arising from the activities of the SPE, or (d) UBS retains the majority of the residual or ownership risks related to the SPE or its assets in order to obtain the benefits from its activities. In many instances, elements are present that, considered in isolation, indicate control or lack of control over an SPE, but when considered together require a significant degree of judgment to reach a conclusion. The exposure to volatility in profits and the absorption of risks and rewards, as well as the ability to make operational decisions for the SPE in question are generally the factors to which most weight is given in reaching a conclusion.

UBS’s policy on consolidation of SPEs is further described in Note 1a) 21).

Equity compensation

UBS recognizes shares, performance shares, options and share-settled stock appreciation rights (SARs) awarded to employees as compensation expenses based on their fair value at grant date. The performance shares, options and SARs that UBS issues to its employees have features that make them not directly comparable with UBS’s shares traded in active markets. Accordingly, UBS cannot determine the fair value by reference to a quoted market price, but instead estimates fair value by using suitable option valuation models. The models require inputs such as expected dividends, share price volatility and historical employee exercise behavior patterns based on statistical data.

Some of the model inputs UBS uses are not market observable and have to be estimated or derived from available data. Use of different estimates would produce different valuations, which in turn would result in higher or lower compensation expense being recognized.

Several recognized valuation models exist, but none can be singled out as the best or most correct. The models UBS applies have been selected because they are able to handle some of the specific features included in the various instruments granted to UBS’s employees. If UBS were to use different models, the values produced would differ, even if the same inputs were used.

Further information on UBS equity compensation plans is disclosed in Note 1a) 24) and Note 31 to the Financial Statements.

Deferred taxes

Deferred tax assets arise from a variety of sources, the most significant being: a) tax losses that can be carried forward to be utilized against profits in future years; and b) expenses recognized in UBS’s income statement that are not deductible until the associated cash flows occur.

UBS records a valuation allowance to reduce its deferred tax assets to the amount which can be recognized in line with the relevant accounting standards. The level of deferred tax asset recognition is influenced by management’s assessment of UBS’s future profitability having regard to relevant business plan forecasts. At each balance sheet date, existing assessments are reviewed and, if necessary, revised to reflect changed circumstances. In a situation where recent losses have been incurred, the relevant accounting standards require convincing evidence that there will be sufficient future profitability.

Swiss tax losses can be carried forward for seven years, US federal tax losses for 20 years and UK and Jersey tax losses for an unlimited period. The deferred tax assets recognized on 31 December 2010 have been based on future profitability assumptions over the five-year time horizon, adjusted to take into account the recognition criteria of IAS 12. The level of deferred tax assets recognized may, however, need to be adjusted in the future in the event of changes in those profitability assumptions. On 31 December 2010, the recognized deferred tax assets amounted to CHF 9.5 billion, which included an amount of CHF 8.9 billion in respect of tax losses (mainly in Switzerland and the US) that can be utilized to offset taxable income in future years. Refer to Note 22 for further details.

UBS’s policy on deferred taxes is described in more detail in Note 1a) 21).

Hedge accounting

The Group uses derivative instruments as part of its asset and liability management activities to manage exposures particularly to interest rate and foreign currency risks, including exposures arising from forecast transactions. If derivative and non-derivative instruments meet certain criteria, they are designated as fair value hedges, cash flow hedges or net investment hedges. The designation of derivatives as hedging instruments is at the discretion of UBS.

At the time a financial instrument is designated as a hedge, the Group formally documents the relationship between the hedging instrument(s) and hedged item(s), including the risk management objectives and strategy in undertaking the hedge transaction and the methods that will be used to assess the effectiveness of the hedging relationship. Accordingly, the Group assesses, both at the inception of the hedge and on an ongoing basis, whether the hedging instruments, primarily derivatives, have been “highly effective” in offsetting changes in the fair value or cash flows of the hedged items.

Changes in the fair value of derivatives that qualify as fair value hedges are recorded in the income statement along with the change in the fair value of the hedged item attributable to the hedged risk. The effective portion of changes in the fair value of derivatives that qualify as cash flow hedges is recognized in equity and transferred to profit or loss in the same periods in which the hedged cash flows affect profit or loss. Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges.

The Group discontinues hedge accounting when it determines that a hedging instrument is not, or has ceased to be, highly effective as a hedge; when the derivative expires or is sold, terminated or exercised; when the hedged item matures, is sold or repaid; or
when a forecast transaction is no longer deemed highly probable. In certain circumstances, the Group may decide to discontinue hedge accounting even though the mentioned criteria for discontinuing are not fulfilled. De-designated hedging derivatives are treated as held for trading from the de-designation date.

Further information on hedge accounting is disclosed in Note 1a) 15) and Note 23.

**Provisions**

Provisions are recognized when UBS has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required to settle the obligation and the amount can be reliably estimated.

When a provision is recognized, its amount may need to be estimated as the exact amount of the obligation is often unknown. The estimate is based on all available information and reflects the amount that in management's opinion represents the best estimate of the expenditure required to settle the present obligation at the end of the reporting period. Future events that may affect the amount required to settle the obligation are reflected in the amount provided, whenever there is sufficient objective evidence that such future events will occur. UBS revises existing provisions up or down as soon as it is able to quantify the amounts more accurately. Management is required to exercise judgment in making assumptions and estimations when calculating provisions.

Provisions are classified in Note 21 into the following categories: operational risks, litigation, restructuring and other. Operational risks includes provisions resulting from security risks and transaction processing risks. Litigation includes provisions for claims related to legal, liability and compliance risks. Other includes reinstatement costs for leasehold improvement, provisions for onerous lease contracts, provisions for employee benefits and other items.

Further details of UBS's policy on provisions are contained in Note 1a) 26).

**Pension and other post-employment benefit plans**

The defined benefit obligation at the end of the year and the net periodic pension cost for the year depend on the expected future benefit promises that are determined using a number of economic and demographic assumptions. The economic assumptions include the discount rate, the expected salary increase, the expected return on plan assets as well as the rate of pension increase.

The discount rate is determined by reference to rates of return on high-quality fixed-income investments of appropriate term at the measurement date. For the Swiss pension plan, this assumption decreased to 2.8% in 2010 compared with 3.3% in 2009 and reflects the decline in the Swiss franc interest rate observed in the market.

The assumption for salary increases reflects the long-term expectations for salary growth and takes into account inflation, seniority, promotion and other relevant factors such as supply and demand in the labor market. For the Swiss pension plan, the assumption for 2010 remained stable in comparison with 2009.

The expected return on plan assets is the long-term average return that is expected on the pension assets. This assumption takes into account the expected returns for each asset class, e.g. equities, debt instruments and real estate. For the Swiss pension plan, the assumption for 2010 was 4.3% compared with 4.5% in 2009.

The assumption for pension increases reflects the long-term expectations of pension increases. For the Swiss pension plan, this assumption decreased to 0.3% in 2010 compared with 0.5% in 2009.

More information on Pension and other post-employment benefit plans (including the assumptions for the international pension plans) is given in Note 30 and Note 1a) 23).
Management's report on internal control over financial reporting

The Board of Directors and management of UBS AG (UBS) are responsible for establishing and maintaining adequate internal control over financial reporting. UBS's internal control over financial reporting is designed to provide reasonable assurance regarding the preparation and fair presentation of published financial statements in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board.

UBS's internal control over financial reporting includes those policies and procedures that:

– Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect transactions and dispositions of assets;
– Provide reasonable assurance that transactions are recorded as necessary to permit preparation and fair presentation of financial statements, and that receipts and expenditures of the company are being made only in accordance with authorizations of UBS management; and
– Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

UBS management assessed the effectiveness of UBS's internal control over financial reporting as of 31 December 2010 based on the criteria set forth by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in Internal Control-Integrated Framework. Based on this assessment, management believes that, as of 31 December 2010, UBS's internal control over financial reporting was effective.

The effectiveness of UBS's internal control over financial reporting as of 31 December 2010 has been audited by Ernst & Young Ltd, UBS's independent registered public accounting firm, as stated in their report appearing on pages 260 to 261, which expressed an unqualified opinion on the effectiveness of UBS's internal control over financial reporting as of 31 December 2010.
To the General Meeting of

UBS AG, Zurich and Basel

Basel, 3 March 2011

Report of independent registered public accounting firm on internal control over financial reporting

We have audited the internal control over financial reporting of UBS AG and its subsidiaries as of 31 December 2010, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). UBS AG’s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in Management’s Report on Internal Control Over Financial Reporting on page 259. Our responsibility is to express an opinion on the Company’s internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States of America). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company’s internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company’s assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.
In our opinion, UBS AG and its subsidiaries maintained, in all material respects, effective internal control over financial reporting as of 31 December 2010, based on the COSO criteria.

We also have audited, in accordance with Swiss law, Swiss Auditing Standards, International Standards on Auditing and the standards of the Public Company Accounting Oversight Board (United States of America), the consolidated balance sheets of UBS AG and its subsidiaries as of 31 December 2010 and 2009, and the related consolidated income statements and consolidated statements of comprehensive income, changes in equity and cash flows for each of the three years in the period ended 31 December 2010 and notes thereto, of UBS AG and our report dated 3 March 2011 expresses an unqualified opinion thereon.

Dr. Andreas Blumer
Licensed Audit Expert
To the General Meeting of

UBS AG, Zurich and Basel

Basel, 3 March 2011

Report of the statutory auditor and the independent registered public accounting firm on the consolidated financial statements

As statutory auditor, we have audited the consolidated financial statements of UBS AG and its subsidiaries which are comprised of the consolidated balance sheets as of 31 December 2010 and 2009, and the related consolidated income statements and consolidated statements of comprehensive income, changes in equity and cash flows, and notes thereto, for each of the three years in the period ended 31 December 2010 on pages 265 to 378.

Board of Directors’ responsibility

The Board of Directors is responsible for the preparation and fair presentation of the consolidated financial statements in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board, and the requirements of Swiss law. This responsibility includes designing, implementing and maintaining an internal control system relevant to the preparation and fair presentation of consolidated financial statements that are free from material misstatement, whether due to fraud or error. The Board of Directors is further responsible for selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditor’s responsibility

Our responsibility is to express an opinion on these consolidated financial statements based on our audit. We conducted our audit in accordance with Swiss law, Swiss Auditing Standards, International Standards on Auditing and the standards of the Public Company Accounting Oversight Board (United States of America). Those standards require that we plan and perform the audit to obtain reasonable assurance whether the consolidated financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated financial statements. The procedures selected depend on the auditor’s judgment, including the assessment of the risks of material misstatement of the consolidated financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers the internal control system relevant to the entity’s preparation and fair presentation of the consolidated financial statements in order to design audit procedures that are appropriate in the circumstances. An audit also includes evaluating the appropriateness of the accounting policies used
and the reasonableness of accounting estimates made, as well as evaluating the overall presentation of the consolidated financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of UBS AG and its subsidiaries at 31 December 2010 and 2009, and the consolidated results of operations and the cash flows for each of the three years in the period ended 31 December 2010 in accordance with IFRS, as issued by the International Accounting Standards Board, and comply with Swiss law.

Report on other legal and regulatory requirements

We confirm that we meet the Swiss legal requirements on licensing according to the Auditor Oversight Act (AOA) and independence (article 72B Code of Obligations (CO) and article 11 AOA) and that there are no circumstances incompatible with our independence.

In accordance with article 72Ba paragraph 1 item 3 CO and Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of consolidated financial statements in accordance with the instructions of the Board of Directors.

In accordance with Swiss law, we recommend that the consolidated financial statements submitted to you be approved.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States of America), the internal control over financial reporting of UBS AG and its subsidiaries as of 31 December 2010, based on criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated 3 March 2011 expresses an unqualified opinion on the effectiveness of the Group’s internal control over financial reporting.

### Shares issued

On 5 March 2010, the mandatory convertible notes (MCNs) with a notional value of CHF 13 billion issued in March 2008 to the Government of Singapore Investment Corporation Pte. Ltd. and an investor from the Middle East were converted into UBS shares. The notes were converted at a price of CHF 47.68 per share. As a result, UBS issued 272,651,005 new shares with a nominal value of CHF 0.10 each from existing conditional capital. The MCNs were treated as equity instruments and recognized in Share premium. The conversion of the MCNs resulted in a reclassification of CHF 27 million from Share premium to Share capital.

### Conditional share capital

On 31 December 2010, 149,920,712 shares were available for issue to fund UBS’s employee share option programs. In addition, conditional capital of up to 100,000,000 shares was available in connection with the Swiss National Bank (SNB) transaction. Furthermore, on 14 April 2010 the Annual General Meeting of UBS AG approved the creation of conditional capital up to a maximum amount of 380,000,000 shares for conversion rights/warrants granted in connection with the issuance of bonds or similar financial instruments. These positions are shown as conditional share capital in the UBS AG (Parent Bank) disclosure.

Notes to the consolidated financial statements

Note 1 Summary of significant accounting policies

a) Significant accounting policies

The principal accounting policies applied in the preparation of these consolidated financial statements are set out below. These policies have been consistently applied to all the years presented, unless otherwise stated.

1) Basis of accounting

UBS AG and subsidiaries (“UBS” or the “Group”) provide a broad range of financial services including: advisory services, underwriting, financing, market making, asset management and brokerage on a global level and retail banking in Switzerland. The Group was formed on 29 June 1998 when Swiss Bank Corporation and Union Bank of Switzerland merged. The merger was accounted for using the uniting of interests method of accounting.

The consolidated financial statements of UBS (the “Financial Statements”) are prepared in accordance with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board (IASB), and are stated in Swiss francs (CHF), the currency of Switzerland where UBS AG is incorporated. On 3 March 2011, the Board of Directors approved them for issue.

Disclosures under IFRS 7 Financial Instruments: Disclosures about credit risk-related disclosures are provided in Note 29c.

2) Use of estimates in the preparation of the Financial Statements

In preparing the financial statements in conformity with IFRS, management is required to make estimates and assumptions that affect reported income, expenses, assets, liabilities and disclosure of contingent assets and liabilities. Use of available information and application of judgment are inherent in the formation of estimates. Actual results in the future could differ from such estimates, and the differences may be material to the Financial Statements.

3) Subsidiaries

The Financial Statements comprise those of the parent company (UBS AG) and its subsidiaries, including controlled special purpose entities (SPEs), presented as a single economic entity. UBS controls an entity if it has the power to govern the financial and operating policies. This is generally accompanied by a shareholding of more than one-half of the voting rights. Subsidiaries, including SPEs that are directly or indirectly controlled by the Group, are consolidated from the date on which control is transferred to the Group. Subsidiaries to be divested are consolidated up to the date of disposal (i.e. loss of control).

Equity attributable to non-controlling interests (formerly minority interests) is presented on the consolidated balance sheet within equity, and is separate from equity attributable to UBS shareholders. Net profit attributable to non-controlling interests is shown separately in the income statement.

The Group sponsors the formation of entities, which may or may not be directly or indirectly owned subsidiaries, in order to accomplish certain narrow and well defined objectives. Such trusts and other SPEs are consolidated in the Group’s Financial Statements when the substance of the relationship between the Group and the company indicates that the company is controlled by the Group. The following circumstances may indicate a relationship in which, in substance, UBS controls and consequently consolidates the SPE:

- the activities of the SPE are being conducted on behalf of UBS according to its specific business needs so that UBS obtains benefits from the SPE's operations;
- UBS has the decision-making powers to obtain the majority of the benefits of the activities of the SPE or, by setting up an “autopilot” mechanism, UBS has delegated these decision-making powers;
- UBS has rights to obtain the majority of the benefits of the SPE and therefore may be exposed to risks associated with the activities of the SPE; or
- UBS retains the majority of the residual or ownership risks related to the SPE or its assets in order to obtain benefits from its activities.

SPEs that are used to allow clients to hold investments are structures that allow one or more clients to invest in specific risk and reward profiles or assets. Typically, UBS will receive service and commission fees for the creation of the SPE, or because UBS acts as investment manager, custodian or in some other function. Some of these SPEs are single-investor or family trusts while others allow a large number of investors to invest in a diversified asset base through a single share, note or certificate. The majority of UBS’s SPEs are created for client investment purposes and are not consolidated. However, UBS consolidates SPEs in certain cases, in which UBS absorbs the majority of the risks and rewards or has unilateral liquidation rights.

SPEs used for securitization are created when UBS has assets (for example, a portfolio of loans) which it sells to an SPE, and the SPE in turn sells interests in the assets as securities to investors. Consolidation of these SPEs depends mainly on whether UBS retains the majority of the risks and rewards of the assets in the SPE.
Note 1 Summary of significant accounting policies (continued)

UBS does not consolidate SPEs for securitization if it has no control over the assets and if it no longer retains any significant exposure (for gain or loss) to the income or investment returns on the assets sold to the SPE or the proceeds of their liquidation. This type of SPE is known as a bankruptcy-remote entity: if UBS were to go bankrupt, the holders of the securities would clearly be owners of the asset, while if the SPE were to go bankrupt, the securities holders would have no recourse against UBS.

SPEs used for credit protection are set up to allow UBS to sell and purchase the credit risk on portfolios, which may or may not be held by UBS, to investors. They exist primarily to allow UBS to have a single counterparty (the SPE) to which it sells. The SPE in turn has investors who provide it with capital and also participate in the risks and rewards of the credit events that it insures. UBS generally consolidates SPEs that are used for credit protection when, for instance, UBS receives benefits from funding or has unilateral liquidation rights.

Employee benefit trusts are used in connection with share-based payment arrangements and deferred compensation schemes. Such trusts are consolidated when the substance of the relationship between UBS and the entity indicated that the entity is controlled by UBS.

UBS continuously evaluates whether triggering events require the reconsideration of consolidation decisions that were made at inception of its involvement with the SPE. This is especially the case in relation to securitization vehicles and collateralized debt obligations (CDOs). Triggering events are usually caused by restructuring, the vesting of potential rights and acquisition or the disposal or expiration of interests. In these circumstances, special purpose entities may or may not be consolidated or deconsolidated depending on how conditions have changed.

Consolidated financial statements are prepared using uniform accounting policies for like transactions and other events in similar circumstances. Intercompany transactions, balances and unrealized gains or losses on transactions between the Group companies are eliminated.

Business combinations completed after 1 January 2010 are accounted for using the acquisition method. As of the acquisition date UBS recognizes the identifiable assets acquired and the liabilities assumed at their acquisition-date fair values. For each business combination, UBS measures the non-controlling interests in the acquiree that are present ownership interests and provide entitlement to a proportionate share of the net assets in the event of liquidation either at fair value or at the proportionate share of the acquiree’s identifiable net assets. All other components of the non-controlling interests are measured at their acquisition-date fair values. The cost of an acquisition is the aggregate of the assets transferred, the liabilities incurred to former owners of the acquiree and the equity instruments issued, measured at acquisition-date fair values. Acquisition-related costs are expensed as incurred.

Any contingent consideration to be transferred by UBS is recognized at fair value at the acquisition date. Subsequent changes in the fair value of the contingent consideration which is deemed to be an asset or liability will be recognized either in profit or loss. If the contingent consideration is classified as equity, it is not re-measured until it is finally settled within equity.

Goodwill is recognized as a separate asset. It is initially measured at cost, being the excess of the aggregate of the consideration transferred and the amount recognized for non-controlling interests over the net identifiable assets acquired and liabilities assumed. If the fair value of the net assets of the subsidiary acquired exceeds the aggregate of the amounts specified above, the difference is recognized in profit or loss on the acquisition date.

The accounting treatment of business combinations completed prior to 1 January 2010 was different in the following aspects:
- Transaction costs directly attributable to the acquisition formed part of the acquisition costs.
- The non-controlling interest was measured as a proportion of the acquiree’s identifiable net assets.
- Contingent consideration was recognized if, and only if, UBS had a present obligation, economic outflow was likely and a reliable estimate was determinable. Subsequent adjustments to the contingent consideration were recognized as part of goodwill.

Assets and liabilities of subsidiaries are classified as “held for sale” if their carrying amount will be recovered principally through a sale transaction rather than through continuing use – see items 19) and 28). Major lines of business and subsidiaries that were acquired exclusively for the purpose of resale are presented as discontinued operations. This information is presented in the statement of comprehensive income for the period when the sale occurred. It may also be presented when it becomes highly probable that a sale will occur within 12 months – see item 28).

4) Associates and jointly controlled entities
Investments in associates in which UBS has a significant influence are accounted for under the equity method of accounting. Significant influence is normally evidenced when UBS owns between 20% and 50% of a company’s voting rights. Investments in associates are initially recorded at cost, and the carrying amount is increased or decreased to recognize the Group’s share of the investee’s net profit or loss (including net profit or loss recognized directly in equity) after the date of acquisition.

Interests in jointly controlled entities, in which UBS and one or more third parties have joint control, are accounted for under the equity method. A jointly controlled entity is subject to a contractual agreement between UBS and one or more third parties, which establishes joint control over its economic activities. Interests in such entities are reflected under Investments in associates on the balance sheet, and the related disclosures are included in the disclosures for associates. UBS holds certain interests in jointly controlled real estate entities.
Note 1 Summary of significant accounting policies (continued)

Investments in associates and interests in jointly controlled entities are classified as “held for sale” if their carrying amount will be recovered principally through a sale transaction rather than through continuing use – see items 19) and 28).

5) Recognition and derecognition of financial instruments

UBS recognizes financial instruments on its balance sheet when the Group becomes a party to the contractual provisions of the instrument.

UBS acts as trustee and in other fiduciary capacities that result in the holding or placing of assets on behalf of individuals, trusts, retirement benefit plans and other institutions. These assets and the related income are excluded from UBS’s financial statements, as they are not assets of UBS, unless the recognition criteria for the assets are satisfied.

Financial assets

UBS enters into transactions where it transfers financial assets recognized on its balance sheet but retains either all risks and rewards of the transferred financial assets or a portion of them. If all or substantially all risks and rewards are retained, the transferred financial assets are not derecognized from the balance sheet. Transfers of financial assets with retention of all or substantially all risks and rewards include securities lending and repurchase transactions described under items 13) and 14). They also include transactions where financial assets are sold to a third party with a concurrent total return swap on the transferred assets to retain all their risks and rewards. These types of transactions are accounted for as secured financing transactions.

In transactions where substantially all of the risks and rewards of ownership of a financial asset are neither retained nor transferred, UBS derecognizes the financial asset if control over the asset is lost. The rights and obligations retained in the transfer are recognized separately as assets and liabilities as appropriate. In transfers where control over the financial asset is retained, the Group continues to recognize the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset. Examples of such transactions are transfers of financial assets involving guarantees, writing put options, acquiring call options, or specific types of swaps linked to the performance of the asset.

Financial liabilities

UBS removes a financial liability from its balance sheet when it is extinguished, i.e. when the obligation specified in the contract is discharged, cancelled or expires. When an existing financial liability is exchanged for a new one from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and recognition of a new liability. The difference in the respective carrying amounts is recognized in profit or loss.

6) Determination of fair value

The fair value principles applied when determining fair value are considered significant accounting policies. Fair value is the amount for which an asset could be exchanged or a liability settled between knowledgeable, willing parties in an arm’s length transaction. Details of the determination of fair value of financial instruments, fair value hierarchy, valuation techniques and inputs by products, day 1 profit or loss and other related fair value disclosures are disclosed in Note 27.

7) Trading portfolio assets and liabilities

An acquired non-derivative financial asset or liability is classified at acquisition as held for trading and presented in the trading portfolio if it is (a) acquired or incurred principally for the purpose of selling or repurchasing it in the near term; or (b) part of a portfolio of identified financial instruments that are managed together and for which there is evidence of a recent actual pattern of short-term profit-taking.

The trading portfolio includes non-derivative financial instruments (including those with embedded derivatives) and commodities. Financial instruments which are considered derivatives in their entirety are generally presented on the balance sheet as Positive and Negative replacement values (refer to item 15)). UBS’s trading portfolio assets and liabilities (refer to Note 11) include proprietary positions, hedge positions and client business-related positions (provided the recognition criteria mentioned in item 5) are satisfied.

Trading portfolio assets consist of debt instruments (including those in the form of securities, money market paper, traded corporate and bank loans), equity instruments (including those in the form of securities), assets held under unit-linked contracts and precious metals and other commodities owned by the Group (“long” positions). Trading portfolio liabilities consist of obligations to deliver financial instruments such as debt and equity instruments which the Group has sold to third parties but does not own (“short” positions).

The trading portfolio is carried at fair value. Gains and losses realized on disposal or redemption and unrealized gains and losses from changes in the fair value of trading portfolio assets and liabilities are reported as Net trading income. Interest and dividend income and expense on trading portfolio assets or liabilities are included in Interest and dividend income or Interest and dividend expense.

The Group uses settlement date accounting when recording trading financial asset transactions. From the date the purchase transaction is entered into (trade date), UBS recognizes any unrealized profits and losses arising from revaluing that contract to fair value in Net trading income. The corresponding receivable or payable is presented on the balance sheet as a Positive or Negative replacement value. When the transaction is consummated (settlement date), a resulting financial asset is recognized on the balance sheet at the fair value of the consideration given or received plus or minus the change in fair value of the contract since the trade date. When the Group becomes party to a sales contract of
a financial asset classified in its trading portfolio, unrealized profits and losses are no longer recognized from the date the sales transaction is entered into (trade date) and it derecognizes the asset on the day of its transfer (settlement date).

Trading portfolio assets transferred to external parties that do not qualify for derecognition (see item 5)) are reclassified on UBS’s balance sheet from Trading portfolio assets to Trading portfolio assets pledged as collateral, if the transferee has received the right to sell or repledge them.

8) Financial assets and Financial liabilities designated at fair value through profit or loss (“Fair Value Option”)

A financial instrument may only be designated at fair value through profit or loss at inception and this designation cannot subsequently be changed. Financial assets (refer to Note 12) and financial liabilities (refer to Note 19) designated at fair value are presented in separate lines on the face of the balance sheet.

The conditions for applying the fair value option are met when:

a) they are hybrid instruments which consist of a debt host and an embedded derivative component, or
b) they are items that are part of a portfolio which is risk managed on a fair value basis and reported to senior management on that basis, or
c) the application of the fair value option reduces or eliminates an accounting mismatch that would otherwise arise.

UBS has designated most of its issued hybrid debt instruments as Financial liabilities designated at fair value through profit or loss. These instruments are based predominantly on the following categories of underlyings:

- **Credit-linked**: bonds, notes linked to the performance (coupon and/or redemption amount) of single names (such as a company or a country) or a basket of reference entities.
- **Equity-linked**: bonds, notes that are linked to a single stock, a basket of stocks or an equity index.
- **Rates-linked**: bonds, notes linked to a reference interest rate, interest rate spread or formula.

Besides hybrid instruments, the fair value option is also applied to certain loans and loan commitments which are substantially hedged with credit derivatives. The application of the fair value option to these instruments reduces an accounting mismatch, as loans would have been otherwise accounted for at amortized cost or as financial investments available-for-sale (refer to item 9), whereas the hedging credit protection is accounted for as a derivative instrument at fair value through profit or loss.

UBS has also applied the fair value option to a hedge fund investment and a structured reverse repurchase agreement which are part of portfolios managed on a fair value basis. Fair value changes related to financial instruments designated at fair value through profit or loss are recognized in Net trading income. Interest income and interest expense on financial assets and liabilities designated at fair value through profit or loss are included in Interest income on financial assets designated at fair value or Interest on financial liabilities designated at fair value. Refer to Note 3.

UBS applies the same recognition and derecognition principles to financial instruments designated at fair value as to financial instruments held for trading (refer to items 5) and 7)).

9) Financial investments available-for-sale

Financial investments available-for-sale are non-derivative financial assets that are not classified as held for trading, designated at fair value through profit or loss, or loans and receivables. They are recognized on a settlement date basis.

Financial investments available-for-sale include highly liquid debt securities, strategic equity investments, certain investments in real estate funds as well as instruments that, in management’s opinion, may be sold in response to or in anticipation of needs for liquidity or changes in interest rates, foreign exchange rates or equity prices. In addition, certain equity instruments, including private equity investments as well as debt instruments and non-performing loans acquired in the secondary market are classified as financial investments available-for-sale. Highly liquid debt securities are mainly issued by government and government-controlled institutions.

Financial investments available-for-sale are initially recognized at fair value including direct transaction costs and are subsequently measured at fair value. Unrealized gains or losses are reported in Equity, net of applicable income taxes, until such investments are sold, collected or otherwise disposed of, or until any such investment is determined to be impaired. Unrealized gains or losses before tax are presented separately in Note 13. However, foreign exchange translation gains or losses associated with monetary instruments such as debt securities are recognized in Net trading income, whereas foreign exchange translation gains or losses associated with non-monetary instruments such as equity securities are part of the overall fair value change of the assets recognized directly in Equity. On disposal of an investment, the accumulated unrealized gain or loss included in Equity is transferred to Net profit for the period and reported in Other income. Gains and losses on disposal are determined using the average cost method and are included in the income statement.

Interest and dividend income on financial investments available-for-sale are included in Interest and dividend income from financial investments available-for-sale.

UBS assesses at each balance sheet date whether there are indicators of impairment of an available-for-sale investment. An available-for-sale investment is impaired when there is objective evidence that as a result of one or more events that occurred after the initial recognition of the investment, the estimated future cash flows of the investment have been affected. For equity investments available-for-sale, a significant or prolonged decline in fair value below the original cost is considered to be objective evidence of impairment. For debt investments available-for-sale, objective evidence of impairment includes, for example, a signifi-
Note 1  Summary of significant accounting policies (continued)

cant financial difficulty of the issuer or counterparty, default or delinquency in interest or principal payments or probability that the borrower will enter bankruptcy or financial re-organization. If a financial investment available-for-sale is determined to be impaired, the related cumulative net unrealized loss previously recognized in Equity is included in Net profit for the period and reported as a deduction from Other income. Any further loss is directly recognized in the income statement.

After the recognition of impairment on a financial investment available-for-sale, increases in fair value of equity instruments are reported in Equity and increases in fair value of debt instruments up to original cost are recognized in Other income, provided that the fair value increase is related to an event occurring after the impairment loss was recorded.

UBS applies the same recognition and derecognition principles to financial assets available-for-sale as to those “Held-for-trading”, except that unrealized gains or losses between trade date and settlement date are recognized in Equity (refer to items 5) and 7).

10) Loans and receivables

“Loans and receivables” are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market, not classified as held-for-trading, not designated as at fair value through profit and loss or available-for-sale, and are not those for which the Group may not recover substantially all of its initial net investment, other than because of credit deterioration.

“Loans and receivables” include:

– originated loans where money is provided directly to the borrower, participation in a loan from another lender and purchased loans (certain purchased non-performing loans are also classified as financial investment available-for-sale at inception) initially classified as “Loans and receivables”;
– securities initially classified as “Loans and receivables” and reclassified securities previously “Held-for-trading” (refer to Note 29b) due to illiquid markets such as Auction Rate Securities;
– reclassified loans such as leverage finance loans previously “Held-for-trading” (refer to Note 29b).

For an overview of financial assets and financial liabilities accounted for as “Loans and receivables”, refer to the measurement categories presented in Note 29.

In the fourth quarter of 2008 and the first quarter of 2009, UBS reclassified certain debt financial assets from the category “Held-for-trading” to “Loans and receivables”, mainly due to illiquid markets for these instruments (refer to Note 1b, Note 29b and Note 9a and 9b). When a financial asset is reclassified from “Held-for-trading” to “Loans and receivables”, the financial asset is reclassified at its fair value on the date of reclassification. Any gain or loss recognized in the income statement before reclassification is not reversed. The fair value of a financial asset on the date of reclassification becomes its cost basis or amortized cost basis, as applicable.

Loans are recognized when cash is advanced to borrowers. They are initially recorded at fair value, which is the cash given to originate or purchase the loan, plus any direct transaction costs, and are subsequently measured at amortized cost using the effective interest rate (EIR) method.

Interest on loans is included in Interest earned on loans and advances and is recognized on an accrual basis. Fees and direct costs relating to loan origination, refinancing or restructuring and to loan commitments are deferred and amortized to Interest earned on loans and advances over the life of the loan using the straight-line method, which approximates the EIR method. Fees received for commitments that are not expected to result in a loan are included in Credit-related fees and commissions over the commitment period. Loan syndication fees where UBS does not retain a portion of the syndicated loan are credited to commission income.

Renegotiated loans

Subject to assessment on a case-by-case basis, UBS may either restructure a loan or take possession of collateral. Restructuring may involve extending the payment arrangements and agreeing to new loan conditions. Once the terms have been renegotiated, any impairment is measured using the EIR as calculated before the modification of terms and the loan is not considered as past due. Management continuously reviews renegotiated loans to ensure that all criteria are met and that future payments are likely to occur. The loans continue to be subject to impairment assessment, calculated using the loan’s original EIR. If a loan has a variable interest rate, the discount rate for measuring any impairment loss is the current EIR.

Commitments

Letters of credit, guarantees and similar instruments commit UBS to make payments on behalf of third parties under specific circumstances. These instruments, as well as undrawn irrevocable credit facilities, and irrevocable forward starting reverse repurchase agreements and securities borrowing transactions, carry credit risk and are included in the exposure to credit risk table in Note 29c, with their gross maximum exposure to credit risk less provisions.

11) Allowance and provision for credit losses

An allowance or provision for credit losses (refer to Note 9b) is established if there is objective evidence that the Group will be unable to collect all amounts due on a claim according to the original contractual terms or the equivalent value. A “claim” means a loan or receivable carried at amortized cost, or a commitment such as a letter of credit, a guarantee, a commitment to extend credit or other credit products.

Objective evidence of impairment includes, for example, a significant financial difficulty of the issuer or counterparty; default or delinquency in interest or principal payments; or probability that the borrower will enter bankruptcy or financial re-organization.
Note 1 Summary of significant accounting policies (continued)

An allowance for credit losses is reported as a reduction of the carrying value of a claim on the balance sheet. For an off-balance sheet item, such as a commitment, a provision for credit loss is reported in Other liabilities. Additions to allowances and provisions for credit losses are made through Credit loss expense.

Allowances and provisions for credit losses are evaluated at a counterparty-specific level and collectively based on the following principles:

Counterparty-specific: A claim is considered impaired when management determines that it is probable that the Group will not be able to collect all amounts due according to the original contractual terms or the equivalent value.

Individual credit exposures are evaluated based on the borrower's character, overall financial condition, resources and payment record; the prospects for support from any financially responsible guarantors; and, where applicable, the realizable value of any collateral.

The estimated recoverable amount is the present value, using the loan's original EIR, of expected future cash flows, including amounts that may result from restructuring or the liquidation of collateral. Impairment is measured and allowances for credit losses are established for the difference between the carrying amount and the estimated recoverable amount.

Upon impairment, the accrual of interest income based on the original terms of the claim is discontinued, but the increase of the present value of impaired claims due to the passage of time is reported as Interest income.

All impaired claims are generally reviewed and analyzed at least annually. Any subsequent changes to the amounts and timing of the expected future cash flows compared with the prior estimates result in a change in the allowance for credit losses and are charged or credited to Credit loss expense.

An allowance for impairment is reversed only when the credit quality has improved to such an extent that there is reasonable assurance of timely collection of principal and interest in accordance with the original contractual terms of the claim or equivalent value.

A write-off is made when all or part of a claim is deemed uncollectible or forgiven. Write-offs are charged against previously established allowances for credit losses or directly to Credit loss expense and reduce the principal amount of a claim. Recoveries in part or in full of amounts previously written off are credited to Credit loss expense. A restructuring of a financial asset could result in the original loan being derecognized and a new loan being recognized. The new loan is measured at fair value at initial recognition. Any allowance taken against the original loan is removed by increasing write-offs. The gross counterparty exposure, however, may remain unaffected, if the rights existing prior to the restructuring have not been legally waived.

A loan is classified as non-performing when the payment of interest, principal or fees is overdue by more than 90 days and there is no firm evidence that it will be made good by later payments or the liquidation of collateral, insolvency proceedings have commenced against the firm, or obligations have been restructured on concessionary terms.

Collectively: All loans for which no impairment is identified at a counterparty-specific level are grouped on the basis of the Bank's internal credit grading system that considers credit risk characteristics such as asset type, industry, geographical location, collateral type, past-due status and other relevant factors to collectively assess whether impairment exists within a portfolio. Future cash flows for a group of financial assets that are collectively evaluated for impairment are estimated on the basis of historical loss experience for assets with credit risk characteristics similar to those in the group. Historical loss experience is adjusted on the basis of current observable data to reflect the effects of current conditions on which the historical loss experience is based and to remove the effects of conditions in the historical period that do not exist currently. Estimates of changes in future cash flows reflect, and are directionally consistent with, changes in related observable data from year to year. The methodology and assumptions used for estimating future cash flows are reviewed regularly to reduce any differences between loss estimated and actual loss experience. Allowances from collective assessment of impairment are recognized as Credit loss expense and result in an offset to the aggregated loan position. As the allowance cannot be allocated to individual loans, the loans are not considered to be impaired and interest is accrued on each loan according to its contractual terms. At 31 December 2010, the collective loan loss allowances represented 3.7% of the total allowances and provisions for credit losses (refer to Note 9b).

Reclassified and acquired securities: UBS periodically revises its estimated cash flows associated with the portfolio of securities backed by multiple assets. Adverse revisions in cash flow estimates related to credit events are recognized in profit or loss as credit loss expenses. For reclassified securities, increases in estimated future cash receipts as a result of increased recoverability are recognized as an adjustment to the EIR on the loan from the date of change.

12) Securitization structures set up by UBS

UBS securitizes various financial assets, which generally results in the sale of these assets to special purpose entities, which issue securities to investors. UBS applies the policies set out in item 3) in determining whether the respective special purpose entity must be consolidated and those set out in item 5) in determining whether derecognition of transferred financial assets is appropriate. The following statements mainly apply to transfers of financial assets, which are qualified for derecognition.

Gains or losses on securitization are generally recognized when the derecognition criteria are satisfied and are classified in Net trading income.

Interests in the securitized financial assets may be retained in the form of senior or subordinated tranches, interest-only strips or other residual interests (“retained interests”). Retained interests
Note 1 Summary of significant accounting policies (continued)

are primarily recorded in Trading portfolio assets and carried at fair value. Synthetic securitization structures typically involve derivative financial instruments for which the principles set out in item 15) apply.

UBS acts as structurer and placement agent in various MBS and other ABS securitizations. In such capacity, UBS purchases collateral on its own behalf or on behalf of customers during the period prior to securitization. UBS typically sells the collateral into designated trusts at the close of the securitization and underwrites the offerings to investors, earning fees for its placement and structuring services. Consistent with the valuation of similar inventory, fair value of retained tranches is initially and subsequently determined using market price quotations where available or internal pricing models that utilize variables such as yield curves, prepayment speeds, default rates, loss severity, interest rate volatilities and spreads. Where possible, assumptions based on observable transactions are used to determine the fair value of retained tranches, but for several of them substantially no observable information is available.

13) Securities borrowing and lending
Securities borrowing and lending transactions are generally entered into on a collateralized basis. In such transactions, UBS typically lends or borrows securities in exchange for securities or cash collateral. Additionally, UBS borrows securities from its clients' custody accounts in exchange for a fee. The majority of securities lending and borrowing agreements involve shares, and the remainder typically involve bonds and notes. The transactions are normally conducted under standard agreements employed by financial market participants and are undertaken with counterparties subject to UBS's normal credit risk control processes. UBS monitors the market value of the securities received or delivered on a daily basis and requests or provides additional collateral or returns or recalls surplus collateral in accordance with the underlying agreements.

The securities which have been transferred, whether in a borrowing/lending transaction or as collateral, are not recognized on or derecognized from the balance sheet unless the risks and rewards of ownership are also transferred. In such transactions where UBS transfers owned securities and where the borrower is granted the right to sell or repledge them, the securities are reclassified on the balance sheet from Trading portfolio assets to Trading portfolio assets pledged as collateral. Cash collateral received is recognized with a corresponding obligation to return it (Cash collateral on securities lent). Cash collateral delivered is derecognized with a corresponding receivable reflecting UBS's right to receive it back (Cash collateral on securities borrowed). Securities received in a lending or borrowing transaction are disclosed as off-balance sheet items if UBS has the right to resell or repledge them, with securities that UBS has actually resold or repledged also disclosed separately (see Note 24). Additionally, the sale of securities received in a borrowing or lending transaction triggers the recognition of a trading liability (short sale).

Consideration exchanged in financing transactions (i.e. interest received or paid) is recognized on an accrual basis and recorded as Interest income or Interest expense.

14) Repurchase and reverse repurchase transactions
Securities purchased under agreements to resell (Reverse repurchase agreements) and securities sold under agreements to repurchase (Repurchase agreements) are treated as collateralized financing transactions. Nearly all repurchase and reverse repurchase agreements involve debt instruments, such as bonds, notes or money market paper. The transactions are normally conducted under standard agreements employed by financial market participants and are undertaken with counterparties subject to UBS's normal credit risk control processes. UBS monitors the market value of the securities received or delivered on a daily basis and requests or provides additional collateral or returns or recalls surplus collateral in accordance with the underlying agreements.

In a reverse repurchase agreement, the cash delivered is derecognized and a corresponding receivable, including accrued interest, is recorded in the balance sheet line Reverse repurchase agreements, recognizing UBS's right to receive the cash back. In a repurchase agreement, the cash received is recognized and a corresponding obligation, including accrued interest, is recorded in the balance sheet line Repurchase agreements. Securities received under reverse repurchase agreements and securities delivered under repurchase agreements are not recognized on or derecognized from the balance sheet, unless the risks and rewards of ownership are obtained or relinquished. In repurchase agreements where UBS transfers owned securities and where the recipient is granted the right to resell or repledge them, the securities are reclassified in the balance sheet from Trading portfolio assets to Trading portfolio assets pledged as collateral. Securities received in a reverse repurchase agreement are disclosed as off-balance sheet items if UBS has the right to resell or repledge them, with securities that UBS has actually resold or repledged also disclosed separately (see Note 24). Additionally, the sale of securities received in reverse repurchase transactions triggers the recognition of a trading liability (short sale).

Interest earned on reverse repurchase agreements and interest incurred on repurchase agreements is recognized as interest income or interest expense over the life of each agreement.

The Group offsets reverse repurchase agreements and repurchase agreements with the same counterparty, maturity, currency and Central Securities Depository (CSD) for transactions covered by legally enforceable master netting agreements when net or simultaneous settlement is intended.

15) Derivative instruments and hedge accounting
Derivatives are initially recognized at fair value at the date the derivative contract is entered into and are subsequently remeasured to fair value. The method of recognizing fair value gains or losses depends on whether derivatives are held for trading or are...
Note 1 Summary of significant accounting policies (continued)

designed and effective as hedging instruments. If designated as hedging instruments, the method of recognizing gains or losses depends on the nature of the risk being hedged.

Derivative instruments are reported on the balance sheet as Positive replacement values or Negative replacement values (except for futures, 100% daily-margined exchange-traded options and London Clearing House (LCH) interest rate swaps). Where the Group enters into derivatives for trading purposes, gains and losses are recognized in Net trading income. Credit losses incurred on over-the-counter (OTC) derivatives are also reported in Net trading income.

Futures and LCH interest rate swaps with daily margining and 100% daily-margined exchange-traded options, and certain credit derivatives contracts are transacted and measured at fair value. They do not have a replacement value as the variation margin, expressing the cumulative market movements each day, is settled daily on a cash basis. Any unpaid variation margin represents a receivable or payable with fixed amount and settlement date and is presented on the balance sheet under Due from banks and Loans or Due to banks and Due to customers. The daily cash settlement (i.e. change in market value) is booked to Net trading income.

Hedge accounting

The Group also uses derivative instruments as part of its asset and liability management activities to manage exposures to interest rate, foreign currency and credit risks, including exposures arising from forecast transactions. If derivative and non-derivative instruments meet certain criteria specified below, they are designated as hedging instruments in hedges of the change in fair value of recognized assets or liabilities (‘fair value hedges’); hedges of the variability in future cash flows attributable to a recognized asset or liability, or a highly probable forecast transaction (‘cash flow hedges’); or hedges of a net investment in a foreign operation (‘net investment hedges’).

At the time a financial instrument is designated as a hedge, the Group formally documents the relationship between the hedging instrument(s) and hedged item(s), including the risk management objectives and strategy in undertaking the hedge transaction and the methods that will be used to assess the effectiveness of the hedging relationship. Accordingly, the Group assesses, both at the inception of the hedge and on an ongoing basis, whether the hedging instruments, primarily derivatives, have been “highly effective” in offsetting changes in the fair value or cash flows of the hedged items. UBS regards a hedge as highly effective if the following criteria are met: a) at inception of the hedge and throughout its life, the hedge is expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk, and b) actual results of the hedge are within a range of 80% to 125%. In the case of hedging a forecast transaction, the transaction must have a high probability of occurring and must present an exposure to variations in cash flows that would ultimately affect the reported net profit or loss. The Group discontinues hedge accounting when it determines that a hedging instrument is not, or has ceased to be, highly effective as a hedge; when the derivative expires or is sold, terminated or exercised; when the hedged item matures, is sold or repaid; or when a forecast transaction is no longer deemed highly probable.

Hedge ineffectiveness represents the amount by which the changes in the fair value of the hedging instrument differ from changes in the fair value of the hedged item attributable to the hedged risk or the amount by which changes in the present value of future cash flows of the hedging instrument differ from changes (or expected changes) in the present value of future cash flows of the hedged item. Such ineffectiveness is recorded in current period earnings in Net trading income.

Fair value hedges

For qualifying fair value hedges, the change in the fair value of the hedging instrument is recognized in the income statement along with the change in the fair value of the hedged item that is attributable to the hedged risk. In fair value hedges of interest rate risk, the fair value change of the hedged item attributable to the hedged risk is reflected in the carrying value of the hedged item. For a portfolio hedge of interest rate risk, the equivalent change in fair value is reflected in a separate line within Other assets. If the hedge relationship is terminated for reasons other than the derecognition of the hedged item, the difference between the carrying value of the hedged item at that point and the value at which it would have been carried had the hedge never existed (the “unamortized fair value adjustment”) is amortized to the income statement over the remaining term until maturity. If the interest-bearing instruments are derecognized, e.g. due to sale or repayment, the unamortized fair value adjustment is recognized immediately in profit or loss.

Cash flow hedges

A fair value gain or loss associated with the effective portion of a derivative designated as a cash flow hedge is recognized initially in Equity. When the cash flows that the derivative is hedging materialize, resulting in income or expense, then the associated gain or loss on the hedging derivative is simultaneously transferred from Equity to the corresponding income or expense line item.

If a cash flow hedge for a forecast transaction is deemed to be no longer effective, or if the hedge relationship is terminated, the cumulative gain or loss on the hedging derivative previously reported in Equity remains there until the committed or forecast transaction occurs or is no longer expected to occur, at which point it is transferred to profit or loss.

Hedges of net investments in foreign operations

Hedges of net investments in foreign operations are accounted for similarly to cash flow hedges. Gains or losses on the hedging instrument related to the effective portion of the hedge are recognized directly in Equity (and presented in the statement of
changes in equity and statement of comprehensive income under Foreign currency translation, while any gains or losses relating to the ineffective portion are recognized in the income statement. On disposal of the foreign operation, the cumulative value of any such gains or losses recognized directly in Equity is reclassified to the income statement.

Economic hedges which do not qualify for hedge accounting
Derivative instruments which are transacted as economic hedges but do not qualify for hedge accounting are treated in the same way as derivative instruments used for trading purposes, i.e. realized and unrealized gains and losses are recognized in Net trading income except that, in certain cases, the forward points on short duration foreign exchange contracts are reported in Net interest income. Refer to Note 23 for more information on “economic hedges”.

Embedded derivatives
A derivative may be embedded in a “host contract”. Such combinations are known as hybrid instruments and arise predominantly from the issuance of certain structured debt instruments. The embedded derivative is generally required to be separated from the host contract and accounted for as a standalone derivative instrument at fair value through profit or loss, if (a) the host contract is not carried at fair value with changes in fair value reported in the income statement, (b) the economic characteristics and risks of the embedded derivative are not closely related to the economic characteristics and risks of the host contract, and (c) the embedded derivative actually meets the definition of a derivative. Bifurcated embedded derivatives are presented on the same balance sheet line as the host contract, and are shown in Note 29 in the “Held for trading” category, reflecting the measurement and recognition principles applied.

Typically, UBS applies the fair value option to hybrid instruments (see item 8)), in which case bifurcation of an embedded derivative component is not required.

16) Loan commitments
Loan commitments are defined amounts (unutilized credit lines or undrawn portions of credit lines) against which customers can borrow money at defined terms and conditions.

Loan commitments that can be cancelled by UBS at any time (without giving a reason) according to their general terms and conditions are recognized neither on-balance sheet nor off-balance sheet. Upon a loan draw down by the counterparty, the amount of the loan is accounted for as Loans and receivables (refer to item 10)).

Irrevocable loan commitments (where UBS has no right to withdraw the loan commitment once communicated to the beneficiary or which are revocable only due to automatic cancellation upon the deterioration in a borrower’s creditworthiness) are classified into the following categories:

- Derivative loan commitments (loan commitments that can be settled net in cash or by delivering or issuing another financial instrument) or if there is evidence that UBS is selling similar loans resulting from its loan commitments before or shortly after origination (refer to item 15)).
- Loan commitments designated at fair value through profit and loss (“Fair value option”) (refer to item 8)).
- Below market loan commitments. Below market loan commitments are recognized at fair value and subsequently measured at the higher of the initially recognized liability at fair value less cumulative amortization and a provision (refer to item 26)). UBS uses them only in specific situations (e.g. restructuring, insolvency).
- Other loan commitments. Other loan commitments are not recorded in the balance sheet. However, a provision is recognized if it is probable that a loss has been incurred and a reliable estimate of the amount of the obligation can be made (refer to item 26)). Other loan commitments include irrevocable forward starting reverse repos and irrevocable securities borrowing agreements.

17) Cash and cash equivalents
For the purposes of the cash flow statement, cash and cash equivalents comprise balances with less than three months’ maturity from the date of acquisition including cash and balances with central banks, treasury bills, due from banks with an original maturity of less than three months included in Due from banks and Cash collateral receivables on derivative instruments, as well as money market paper included in Trading portfolio assets and Financial investments available-for-sale.

18) Physical commodities
Physical commodities (precious metals, base metals, energy and other commodities) held by UBS as a result of its broker-trader activities are accounted for at fair value less costs to sell and recognized within the Trading portfolio assets. Changes in fair value less costs to sell are recorded in Net trading income.

19) Property and equipment
Property and equipment includes own-used properties, investment properties, leasehold improvements, IT, software and communication and other machines and equipment.

With the exception of investment properties, Property and equipment is carried at cost, less accumulated depreciation and accumulated impairment losses, and is periodically reviewed for impairment. The useful life of property and equipment is estimated on the basis of the economic utilization of the asset.

Classification for own-used property
Own-used property is defined as property held by the Group for use in the supply of services or for administrative purposes, whereas investment property is defined as property held to earn rental income and/or for capital appreciation. If a property of the Group
Note 1 Summary of significant accounting policies (continued)

includes a portion that is own-used and another portion that is held to earn rental income or for capital appreciation, the classification is based on whether or not these portions can be sold separately. If the portions of the property can be sold separately, they are separately accounted for as own-used property and investment property. If the portions cannot be sold separately, the whole property is classified as own-used property unless the portion used by the Group is minor. The classification of property is reviewed on a regular basis to account for major changes in its usage.

Investment property
Investment property is carried at fair value with changes in fair value recognized in the income statement in the period of change. UBS employs internal real estate experts to determine the fair value of investment property by applying recognized valuation techniques. In cases where prices of recent market transactions of comparable properties are available, fair value is determined by reference to these transactions.

Leasehold improvements
Leasehold improvements are investments made to customize buildings and offices occupied under operating lease contracts to make them suitable for the intended purpose. The present value of estimated reinstatement costs to bring a leased property into its original condition at the end of the lease, if required, is capitalized as part of the total leasehold improvements costs. At the same time, a corresponding liability is recognized to reflect the obligation incurred. Reinstatement costs are recognized in profit and loss through depreciation of the capitalized leasehold improvements over their estimated useful lives.

Property held for sale
Non-current property formerly own-used or leased to third parties under an operating lease and equipment the Group has decided to sell and for which sale within 12 months is highly probable are classified as non-current assets held for sale and recorded in Other assets. Upon classification as held for sale, they are no longer depreciated and are carried at the lower of book value or fair value less cost to sell. Foreclosed properties and other properties classified as current assets are included in Properties held for sale and recorded in Other assets (see Note 17). They are also carried at the lower of book value or fair value less cost to sell.

Software
Software development costs are capitalized when they meet certain criteria relating to identifiability, it is probable that future economic benefits will flow to the enterprise and the cost can be measured reliably. Internally developed software that meets these criteria and purchased software are classified within IT, software and communication.

Estimated useful life of property and equipment
Property and equipment is depreciated on a straight-line basis over its estimated useful life as follows:

<table>
<thead>
<tr>
<th>Property Type</th>
<th>Useful Life</th>
</tr>
</thead>
<tbody>
<tr>
<td>Properties, excluding land</td>
<td>Not exceeding 50 years</td>
</tr>
<tr>
<td>Leasehold improvements</td>
<td>Residual lease term, but not exceeding 10 years</td>
</tr>
<tr>
<td>Other machines and equipment</td>
<td>Not exceeding 10 years</td>
</tr>
<tr>
<td>IT, software and communication</td>
<td>Not exceeding 5 years</td>
</tr>
</tbody>
</table>

20) Goodwill and intangible assets
Goodwill represents the excess of the cost of an acquisition over the fair value of the Group’s share of net identifiable assets of the acquired entity at the date of acquisition. Goodwill is not amortized; it is tested yearly for impairment and, additionally, when a reasonable indication of impairment exists. The impairment test is conducted at the segment level as reported in Note 2a. The segment has been determined as the cash-generating unit for impairment testing purposes, since this is the level at which the performance of investments is reviewed and assessed by management. Refer to Note 16 for details.

Intangible assets comprise separately identifiable intangible items arising from business combinations and certain purchased trademarks and similar items. Intangible assets are recognized at cost. The cost of an intangible asset acquired in a business combination is its fair value at the date of acquisition. Intangible assets with a definite useful life are amortized using the straight-line method over their estimated useful economic life, generally not exceeding 20 years. Intangible assets with an indefinite useful life are not amortized. Generally, all identified intangible assets of UBS have a definite useful life. At each balance sheet date, intangible assets are reviewed for indications of impairment or changes in estimated future benefits. If such indications exist, the intangible assets are analyzed to assess whether their carrying amount is fully recoverable. An impairment loss is recognized if the carrying amount exceeds the recoverable amount.

Intangible assets are classified into two categories: a) infrastructure, and b) customer relationships, contractual rights and other. Infrastructure consists of an intangible asset recognized in connection with the acquisition of PaineWebber Group, Inc. Customer relationships, contractual rights and other includes mainly intangible assets for client relationships, non-compete agreements, favorable contracts, proprietary software, trademarks and trade names acquired in business combinations.

21) Income taxes
Income tax payable on profits is recognized as an expense based on the applicable tax laws in each jurisdiction in the period in which profits arise. The tax effects of income tax losses available for carry forward are recognized as a deferred tax asset if it is probable that future taxable profit (based on profit forecast assumptions) will be available against which those losses can be utilized.
Deferred tax assets are recognized for temporary differences that will result in deductible amounts in future periods, but only to the extent that it is probable that sufficient taxable profits will be available against which these differences can be utilized. Deferred tax liabilities are recognized for temporary differences between the carrying amounts of assets and liabilities in the balance sheet and their amounts as measured for tax purposes, which will result in taxable amounts in future periods.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the asset will be realized or the liability will be settled based on enacted rates.

Tax assets and liabilities of the same type (current or deferred) are offset when they arise from the same tax reporting group, they relate to the same tax authority, the legal right to offset exists, and they are intended to be settled net or realized simultaneously.

Current and deferred taxes are recognized as income tax benefit or expense except for current and deferred taxes recognized (i) upon the acquisition of a subsidiary, (ii) for unrealized gains or losses on financial investments available-for-sale, for changes in fair value of derivative instruments designated as cash flow hedges, and for certain foreign currency translations of foreign operations, (iii) for certain tax benefits on deferred compensation awards, and (iv) for gains and losses on the sale of treasury shares. Deferred taxes recognized in a business combination (item (i)) are considered when determining goodwill. Items (ii), (iii) and (iv) are recorded in Net income recognized directly in equity.

22) Debt issued

Debt without embedded derivatives

Issued debt instruments without embedded derivatives that are not designated at fair value through profit or loss are accounted for at amortized cost. However, in cases where fair value hedge accounting is applied to fixed-rate debt instruments as part of the Group’s asset and liability management activity, the carrying values of debt issued are adjusted for changes in fair value related to the hedged exposure rather than carried at amortized cost – refer to item 15 for further discussion.

Debt with embedded derivatives (related to UBS AG shares)

Debt instruments issued with embedded derivatives that are related to UBS AG shares (e.g. mandatory convertible notes) are separated into a liability and an equity component at issue date if the derivative is settled by UBS receiving or delivering a fixed number of its own shares in exchange for a fixed amount of cash or another financial asset. A portion of the net proceeds of the instrument is allocated to the debt component on the date of issue based on its fair value. The determination of fair value is generally based on quoted market prices for UBS debt instruments with comparable terms but without a conversion feature. The debt component is subsequently measured at amortized cost or at fair value through profit or loss, if the fair value option is applied. The remaining amount of the net proceeds is allocated to the equity component and reported in Share premium. The equity component is not subsequently re-measured. However, if the entire debt instrument or the embedded derivative related to UBS AG shares is to be cash settled or if it contains a cash or net share settlement alternative, then the separated derivative is accounted for as a freestanding derivative, with changes in fair value recorded in Net trading income unless the entire hybrid debt instrument is designated at fair value through profit or loss (“Fair Value Option”) – refer to item 8).

Debt with embedded derivatives (not related to UBS AG shares)

Debt instruments issued with embedded derivatives that are related to non-UBS AG equity instruments, foreign exchange, interest rate, credit instruments or indices are considered structured debt instruments. UBS has designated most of its structured debt instruments at fair value through profit or loss (“Fair Value Option”) – see item 8). If such instruments have not been designated at fair value through profit or loss, the embedded derivative is separated from the host contract and accounted for as a standalone derivative if the criteria for separation are met. The host contract is subsequently measured at amortized cost. The fair value option is not applied to certain hybrid instruments which contain bifurcable embedded derivatives with references to foreign exchange rates and precious metal prices and which are not hedged by derivative instruments.

Bonds issued by UBS held as a result of market making activities or deliberate purchases in the market are treated as redemption of debt. A gain or loss on redemption is recorded depending on whether the repurchase price of the bond is lower or higher than its carrying value. A subsequent sale of own bonds in the market is treated as a reissuance of debt.

Interest expense on debt instruments is included in Interest on debt issued. Refer to Note 19 for further details on debt issued.

23) Pension and other post-employment benefit plans

UBS sponsors a number of post-employment benefit plans for its employees worldwide, which include defined benefit and defined contribution plans, and other post-retirement benefits such as medical and life insurance benefits.

Defined benefit plans

Typically defined benefit plans define an amount of pension benefit that an employee will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation.

The defined benefit liability recognized in the balance sheet is the present value of the defined obligation at the balance sheet date less the fair value of the plan assets at the balance sheet date, together with adjustments for any unrecognized actuarial gains and losses and unrecognized past service cost. If the defined benefit liability is negative (i.e. a defined benefit asset), measurement of the asset is limited to the lower of a) the defined benefit asset and b) the total of any cumulative unrecognized net actuarial losses plus unrecognized past service cost plus the present value of any vested defined benefit liabilities.
value of economic benefits available in the form of refunds from the plan or reductions in future contributions to the plan. UBS applies the projected unit credit method to determine the present value of its defined benefit obligation and the related current service cost and, where applicable, past service cost. These amounts are calculated annually by independent actuaries. The principal actuarial assumptions used are set out in Note 30.

UBS recognizes a portion of its actuarial gains and losses as income or expense if the net cumulative unrecognized actuarial gains and losses at the beginning of the reporting period are outside the corridor defined as the greater of:

a) 10% of the present value of the defined benefit obligation at that date (before deducting the fair value of plan assets); and
b) 10% of the fair value of any plan assets at that date.

The unrecognized actuarial gains and losses exceeding the greater of these two values are recognized in the income statement over the expected average remaining working lives of the employees participating in the plans.

UBS recognizes curtailments on its defined benefit plans when the reductions in expected future service and in the defined benefit obligation are 10% or more. Reductions in expected future service and in the defined benefit obligation of between 5% and 10% are recognized if deemed material, and reductions of less than 5% are generally not recognized.

**Defined contribution plans**

A defined contribution plan is a pension plan under which UBS pays fixed contributions into a separate entity. UBS has no legal or constructive obligation to pay further contributions if the plan does not hold sufficient assets to pay employees the benefits relating to employee service in the current and prior periods. UBS’s contributions are expensed when the employees have rendered services in exchange for such contributions; this is generally in the year of contribution. Prepaid contributions are recognized as an asset to the extent that a cash refund or a reduction in the future payments is available.

**Other post-retirement benefits**

UBS also provides post-retirement medical and life insurance benefits to certain retirees in the US and the UK. The expected costs of these benefits are recognized over the period of employment using the same accounting methodology used for the defined benefit plans.

**24) Equity participation and other compensation plans**

**Equity participation plans**

UBS has established several equity participation plans in the form of share plans, option plans and share-settled stock appreciation right (SAR) plans. UBS’s equity participation plans are mandatory, discretionary, or voluntary plans. UBS recognizes the fair value of share, option and SAR awards, determined at the date of grant, as compensation expense over the period that the employee is required to provide services in order to earn the award.

Plans containing voluntary termination non-compete provisions (i.e. good leaver clauses) and no vesting conditions are considered vested at the grant date because no future service is required. Compensation expense is fully recognized on the grant date or is recognized in a period prior to the grant date if the bank can substantiate that the award is attributable to past service and the amount of the award can be reasonably and reliably estimated. The awards remain forfeitable until the legal vesting date if certain conditions are not met. Forfeiture events occurring after the grant date do not result in a reversal of compensation expense because the related services have been received.

Plans containing vesting conditions have either a tiered vesting structure, which vest in increments over that period or a cliff vesting structure, which vest at the end of the period. Such plans may contain provisions that shorten the required service period due to retirement eligibility. In such instances, UBS recognizes compensation expense over the shorter of the legal vesting period and the period from grant to the retirement eligibility date of the employee. Forfeiture of these awards during the service period results in a reversal of compensation expense.

Equity settled awards are classified as equity instruments. The fair value of an equity-settled award is not remeasured subsequent to the grant date, unless its terms are modified such that the fair value immediately after modification exceeds the fair value immediately prior to modification. Any increase in fair value resulting from a modification is recognized as compensation expense, either over the remaining service period or immediately for vested awards.

Cash settled awards are classified as liabilities and remeasured to fair value at each balance sheet date as long as the award is outstanding. Decreases in fair value reduce compensation expense, and no compensation expense, on a cumulative basis, is recognized for awards that expire worthless or remain unexercised.

Details of the determination of fair value of equity participation plans are disclosed in Note 31d).

**Other compensation plans**

UBS has established other fixed and variable deferred cash compensation plans, the value of which is not linked to UBS’s own equity. UBS’s deferred cash compensation plans are either mandatory or discretionary plans.

The grant date fair value of fixed deferred cash awards is recognized as compensation expense over the service period, which is the period the employee is obligated to work in order to become entitled to the award.

Variable deferred cash compensation is generally awarded in the form of alternative investment vehicles (AIVs). The grant date fair value for AIVs is based on the fair value of the underlying assets (i.e. money market funds, UBS and non-UBS mutual funds and other UBS sponsored funds) on the grant date and is subsequently marked-to-market at each reporting date until the award.
is distributed. Forfeiture of these awards results in the reversal of expense. Refer to Note 31 for further details on equity participation and other compensation plans.

25) Amounts due under unit-linked investment contracts
UBS’s financial liabilities from unit-linked contracts are presented as Other liabilities (refer to Note 20) on the balance sheet. These contracts allow investors to invest in a pool of assets through investment units issued by a UBS subsidiary. The unit holders receive all rewards and bear all risks associated with the reference asset pool. The financial liability represents the amount due to unit holders and is equal to the fair value of the reference asset pool.

Assets held under unit-linked investment contracts are presented as Trading portfolio assets. Refer to Note 11.

26) Provisions
Provisions are recognized when UBS has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources will be required to settle the obligation and the amount can be reliably estimated. When a provision is recognized, its amount needs to be estimated as the exact amount of the obligation is generally unknown. The estimate is based on all available information and reflects the amount that in management’s opinion represents the best estimate of the expenditure required to settle the obligation. UBS revises existing provisions up or down as soon as it is able to quantify the amounts more accurately. If the effect of the time value of money is material, provisions are discounted and measured at the present value of the expenditure expected to settle the obligation, using a rate that reflects the current market assessments of the time value of money and the risks specific to the obligation.

The majority of UBS’s provisions relate to operational risks, including litigation and restructuring costs. Provisions are reflected under Other liabilities on the balance sheet. Refer to Note 21.

If the amount of an obligation cannot be measured with sufficient reliability, a present obligation is not recognized but disclosed as contingent liabilities in Note 21.

27) Equity, treasury shares and contracts on UBS shares

Transaction costs related to share issuances
Incremental costs directly attributable to the issue of new shares or contracts with physical settlement (classified as equity instruments) are recognized in Equity as “transaction costs related to share issuances, net of tax” and are a deduction from Equity.

Non-controlling interests
Net profit and Equity are presented including non-controlling interests. Net profit is split into Net profit attributable to UBS shareholders and Net profit attributable to non-controlling interests. Equity is split into Equity attributable to UBS shareholders and Equity attributable to non-controlling interests.

UBS AG shares held (“treasury shares”)
UBS AG shares held by the Group are classified in Equity as Treasury shares and accounted for at cost. Treasury shares are deducted from total shareholders’ equity until they are cancelled or reissued. The difference between the proceeds from sales of Treasury shares and their weighted average cost (net of tax, if any) is reported as Share premium.

Contracts with gross physical settlement
Contracts that require gross physical settlement in UBS AG shares are classified in Equity as Share premium (provided a fixed amount of shares is exchanged against a fixed amount of cash) and accounted for at cost. They are added to or deducted from equity until settlement of such contracts. Upon settlement of such contracts, the difference between the proceeds received and their cost (net of tax, if any) are reported as Share premium.

Contracts with net cash settlement or net cash settlement option
Contracts on UBS AG shares that require net cash settlement, or provide the counterparty or UBS with a settlement option which includes a choice of settling net in cash, are classified as trading instruments, with changes in fair value reported in the income statement as Net trading income, except for written put options and forward share purchase contracts.

Physically settled written put options and forward share purchase contracts
Physically settled written put options and forward share purchase contracts, including contracts where physical settlement is a settlement alternative, result in the recognition of a financial liability. At the inception of the contract, the present value of the obligation to purchase own shares in exchange for cash is transferred out of Equity and recognized as a liability. The liability is subsequently accreted, using the EIR method, over the life of the contract to the nominal purchase obligation by recognizing interest expense. Upon settlement of the contract, the liability is derecognized, and the amount of equity originally recognized as a liability is reclassified within Equity to Treasury shares. The premium received for writing put options is recognized directly in Share premium.

Trust preferred securities issued
UBS has issued trust preferred securities through consolidated preferred funding trusts which hold debt issued by UBS. UBS AG has fully and unconditionally guaranteed all of these securities. UBS’s obligations under these guarantees are subordinated to the fully prior payment of the deposit liabilities of UBS and all other liabilities of UBS. The trust preferred securities represent equity instruments which are held by third parties and treated as non-controlling interests in UBS’s consolidated financial statements. Once a coupon payment becomes mandatory, i.e. when it is trig-
Note 1 Summary of significant accounting policies (continued)

gerated by a contractually defined event, the full dividend payment obligation on these trust preferred securities issued is reclassified from Equity to a corresponding liability. In the income statement the full dividend payment is reclassified from Net profit attributable to UBS shareholders to Net profit attributable to non-controlling interests at that time. UBS bonds held by preferred funding trusts are eliminated in consolidation.

28) Discontinued operations and non-current assets held for sale
UBS classifies individual non-current non-financial assets and disposal groups as held for sale if such assets or disposal groups are available for immediate sale in their present condition subject to terms that are usual and customary for sales of such assets or disposal groups and their sale is considered highly probable. For a sale to be highly probable, management must be committed to a plan to sell such assets and is actively looking for a buyer. Furthermore, the assets must be actively marketed at a reasonable sales price in relation to their fair value and the sale is expected to be completed within one year. These assets (and liabilities in the case of disposal groups) are measured at the lower of their carrying amount and fair value less costs to sell and presented in Other assets and Other liabilities (see Notes 17 and 20).

UBS presents discontinued operations in a separate line in the income statement if an entity or a component of an entity has been disposed of or is classified as held for sale and a) represents a separate major line of business or geographical area of operations, b) is part of a single coordinated plan to dispose of a separate major line of business or geographical area of operations, or c) is a subsidiary acquired exclusively with a view to resale (e.g. certain private equity investments). Net profit from discontinued operations includes the net total of operating profit and loss before tax from discontinued operations (including net gain or loss on sale before tax or measurement to fair value less costs to sell) and discontinued operations tax expense. A component of an entity comprises operations and cash flows that can be clearly distinguished, operationally and for financial reporting purposes, from the rest of UBS’s operations and cash flows. If an entity or a component of an entity is classified as a discontinued operation, UBS restates prior periods in the income statement. Refer to Note 37 for further details.

29) Leasing
UBS enters into lease contracts, predominantly of premises and equipment, as a lessor and a lessee. The terms and conditions of these contracts are assessed and the leases are classified as operating leases or finance leases according to their economic substance. When making such an assessment, the Group focuses on the following aspects: a) transfer of ownership of the asset to the lessee at the end of the lease term; b) existence of a bargain purchase option held by the lessee; c) whether the lease term is for the major part of the economic life of the asset; d) whether the present value of the minimum lease payments is substantially equal to the fair value of the leased asset at inception of the lease term; and e) whether the asset is of a specialized nature that only the lessee can use without major modifications being made. If one or more of the conditions are met, the lease is generally classified as a finance lease, while the non-existence of such conditions normally leads to a classification as an operating lease.

Lease contracts classified as operating leases where UBS is the lessee are disclosed in Note 25. These contracts include non-cancellable long-term leases of office buildings in most UBS locations. Lease contracts classified as operating leases where UBS is the lessor, and finance lease contracts where UBS is the lessor or the lessee, are not material. Contractual arrangements which are not considered leases in their entirety but which include lease elements are not material to UBS.

UBS recognizes a provision for a lease contract of office space if the unavoidable costs of a contract exceed the benefits to be received under it, which requires that a lease contract is considered onerous in its entirety. A provision for onerous lease contracts often includes significant vacant rental space.

30) Fee income
UBS earns fee income from a diverse range of services it provides to its clients. Fee income can be divided into two broad categories: income earned from services that are provided over a certain period of time and income earned from providing transaction-type services. Fees earned from services that are provided over a certain period of time are recognized ratably over the service period with the exception of performance-linked fees or fee components which are recognized when the performance criteria are fulfilled. Fees earned from providing transaction-type services are recognized when the service has been completed. Loan commitment fees on lending arrangements are deferred until the loan is drawn down and then recognized as an adjustment to the effective yield over the life of the loan. If the commitment expires and the loan is not drawn down, the fees are recognized as revenue on expiry.

The following fee income is predominantly earned from services that are provided over a period of time: investment fund fees, portfolio management and advisory fees, insurance-related fees and credit-related fees. Fees predominantly earned from providing transaction-type services include underwriting fees, corporate finance fees and brokerage fees.

31) Foreign currency translation
Transactions denominated in foreign currency are translated into the functional currency of the reporting unit at the spot exchange rate on the date of the transaction. At the balance sheet date, all assets and liabilities denominated in foreign currency, except for non-monetary items, are translated using the closing exchange rate. Non-monetary items measured at historical cost are translated at the exchange rate on the date of the transaction. Resulting foreign exchange differences are recognized in Net trading income, except for non-monetary financial investments available-for-sale. Foreign exchange differences from non-monetary finan-
cial investments available-for-sale are recorded directly in **Equity** until the asset is sold or becomes impaired, unless the non-mone-
tary financial investment is subject to a fair value hedge of foreign 
exchange risk, in which case changes in fair value attributable to 
the hedged risk are reported in **Net trading income**.

Upon consolidation, assets and liabilities of foreign operations are 
translated into Swiss francs (CHF) – UBS’s presentation currency – at 
the closing exchange rate on the balance sheet date, and income 
and expense items are translated at the average rate for the period. 
Differences resulting from the use of different exchange rates are 
recognized directly in **Foreign currency translation within Equity**.

When a foreign operation is disposed of such that control, sig-
nificant influence or joint control is lost, the cumulative amount 
in **Foreign currency translation within Equity** related to that foreign 
operation attributable to UBS is reclassified to profit or loss as part 
of the gain or loss on disposal. When UBS disposes of a portion of 
its interest in a subsidiary that includes a foreign operation without 
losing control, the related portion of the cumulative currency trans-
lation balance is reattributed to non-controlling interests. When 
UBS disposes of a portion of its investment in an associate or joint 
venture that includes a foreign operation while retaining signifi-
cant influence or joint control, the related portion of the cumula-
vative currency translation balance is reclassified to profit or loss.

### 32) Earnings per share (EPS)

Basic earnings per share are calculated by dividing the net profit 
or loss for the period attributable to ordinary shareholders by the 
weighted average number of ordinary shares outstanding during 
the period.

Diluted earnings per share are calculated using the same meth-
ond as for basic EPS and adjusting the net profit or loss for the 
period attributable to ordinary shareholders and the weighted av-
erage number of ordinary shares outstanding to reflect the poten-
tial dilution that could occur if options, warrants, convertible debt 
securities or other contracts to issue ordinary shares were con-
verted or exercised into ordinary shares.

### 33) Segment reporting

UBS’s businesses are organized on a worldwide basis into four 
business divisions: Wealth Management & Swiss Bank, Wealth 
Management Americas, Global Asset Management and Invest-
ment Bank, fully supported by the Corporate Center. In 2009, 
these four business divisions were presented as four operating 
segments or reportable segments in Note 2a “Segment report-
ing”, in addition to the Corporate Center column.

In 2010, for the purpose of segment reporting, the business 
division Wealth Management & Swiss Bank was split into two 
separate reportable segments, namely Wealth Management and 
Retail & Corporate. As a result of the split, UBS now presents five 
reportable segments. This change was made in order to better 
reflect the management structure and responsibilities. In the in-
ternal management report to the Group Executive Board or the 
chief operating decision maker, the financial information about 
the five reportable segments and the Corporate Center was sepa-
rate presented. This internal management view was the basis for 
the external segment reporting.

In addition, the Corporate Center column for Note 2a “Seg-
ment Reporting” was renamed to “Treasury activities and other 
corporate items” to reflect the changes in presentation of the Cor-
porate Center information during the year as described in Note 1b 
“Allocation of additional Corporate Center costs and to reportable 
segments”. The Corporate Center is not considered an operating 
segment under IFRS 8 Operating segments. It predominantly in-
cludes the results of treasury activities, e.g. from the management 
of structural foreign exchange risks and interest rate risks, residual 
operating expenses such as those associated with the functioning 
of the Group Executive Board and the Board of Directors, other 
costs related to organizational management, as well as a limited 
number of specifically defined items. These items include the valu-
ation of UBS’s option to acquire the SNB StabFund’s equity and 
expenses such as capital taxes, as well as the difference between 
actually incurred Corporate Center costs and periodically agreed 
flat fees charged to the business divisions. All other costs incurred 
by the Corporate Center related to shared services and control 
functions like risk management and control, finance, legal and 
compliance, marketing and communications, human resources, 
information technology infrastructure and service centers are 
charged out to the reportable segments based on internal ac-
counting policies.

UBS’s internal accounting policies, which include the manage-
ment accounting policies and service level agreements, determine 
the revenues and expenses directly attributable to each reportable 
segment. Internal charges and transfer pricing adjustments are 
reflected in the reportable segment performances.

Revenue-sharing agreements are used to allocate external cli-
ent revenues to reportable segments on a reasonable basis. Due to 
the present arrangement of revenue-sharing agreements, the total 
inter-segment revenues for UBS are not considered material.

The costs of shared services and control functions managed by 
the Corporate Center are allocated to the direct cost lines of per-
sonnel expenses, general and administrative expenses and depre-
ciation in the respective reportable segment income statements, 
based on internally determined allocation keys.

Net interest income is allocated to the reportable segments 
based on their balance sheet positions. Assets and liabilities of the 
reportable segments are funded through and invested with the 
treasury departments located in each business division. The trea-
sury departments are supported by the Group Treasury in the Cor-
porate Center, with the net margin reflected in the results of each 
reportable segment. The Corporate Center transfers interest in-
come earned from managing UBS’s consolidated equity back to 
the reportable segments based on the average attributed equity.

Commissions are credited to the reportable segments based 
on the corresponding client relationship. Revenue-sharing agree-

---

**Note 1** Summary of significant accounting policies (continued)
Note 1 Summary of significant accounting policies (continued)

ments are used for the allocation of customer revenues where several reportable segments are involved in the value-creation chain.

In line with the internal management reporting, segment assets are reported without intercompany balances or on a third-party view basis. Refer to Note 2a “Segment reporting” for further details. For the purpose of segment reporting under IFRS 8, the non-current assets consist of investment in associates and joint ventures, goodwill, other intangible assets as well as plant, property and equipment.

b) Changes in accounting policies, comparability and other adjustments

Wealth Management & Swiss Bank reorganization
From 2010 onwards, the internal reporting of Wealth Management & Swiss Bank to the Group Executive Board was revised in order to better reflect the management structure and responsibilities. Segregated financial information is now reported for:
– “Wealth Management”, encompassing all wealth management business conducted out of Switzerland and in the Asian and European booking centers;
– “Retail & Corporate”, including services provided to Swiss retail private clients, small and medium enterprises and corporate and institutional clients.

In line with this revised internal reporting structure and IFRS 8 Operating segments, Wealth Management and Retail & Corporate are now presented in the external financial reports as separate business units and reportable segments. Prior periods presented have been restated to conform to the new presentation format.

Allocation of additional Corporate Center costs to reportable segments
From 2010 onwards, almost all costs incurred by the Corporate Center related to shared services and control functions are allocated to the reportable segments, which directly and indirectly receive the value of the services, either based on a full cost recovery or on a periodically agreed flat fee. The allocated costs are shown in the respective expense lines of the reportable segments in Note 2a “Segment reporting”, and in the “UBS business divisions and Corporate Center” section of this report.

Up to and including 2009, certain costs incurred by the Corporate Center were presented as Corporate Center expenses and not charged to the business divisions. This change in allocation policy has been applied prospectively and prior year numbers have not been restated.

The incremental charges to the business divisions made in 2010 mainly relate to control functions. If figures for each quarter of 2009 had been presented on the basis of the allocation methodology applied for 2010, the estimated impact on operating expenses and performance before tax would have been as shown in the table below.

The “Corporate Center” column of the table in Note 2a “Segment reporting” has been renamed “Treasury activities and other corporate items”. Refer to Note 1a) 33) “Segment reporting” for more details.

Cash collateral from derivative transactions and Prime brokerage receivables and payables
From 2010 onwards, UBS has changed the presentation of cash collateral from derivative transactions and prime brokerage receivables and payables to improve transparency.

Cash collateral receivables and payables on derivatives are presented in the new balance sheet lines Cash collateral receivables on derivative instruments and Cash collateral payables on derivative instruments by transferring the amounts out of Due from banks and Loans, and Due to banks and Due to customers, respectively. Prime brokerage receivables and prime brokerage payables have been transferred out of Due from banks and Loans to Other assets, and out of Due to banks and Due to customers to Other liabilities, respectively. These changes in presentation impacted neither UBS’s income statement nor total assets and liabilities. The respective tables, notes and other information in this financial information section were adjusted accordingly.

Corporate Center cost allocation impact on 2009 figures

**Equity and Other comprehensive income**

In 2010, UBS reviewed certain components of its equity and made adjustments to correct immaterial misstatements that relate to periods several years back. The following paragraphs describe the impacts of the changes on UBS's financial statements as of 31 December 2010.

UBS’s Foreign currency translation balance was adjusted by a credit of CHF 592 million. The adjustment increased total Other comprehensive income by CHF 592 million and total Comprehensive income by CHF 429 million because a loss of CHF 163 million was transferred to the income statement.

In addition, UBS reclassified an amount of CHF 213 million from Equity attributable to non-controlling interests to Other liabilities as this amount has been identified as redeemable and therefore not satisfying the criteria for an equity instrument under IFRS. Also, an amount of CHF 134 million relating to an equity participation plan was reclassified from Share premium to Other liabilities as it was identified that the amount is not related to equity settled awards. The impact on the income statement for both items was insignificant.

Furthermore, UBS merged the balance of the balance sheet line Revaluation reserve from step acquisitions, net of tax into Share premium, resulting in an increase of Share premium by CHF 38 million. The balance sheet as of 31 December 2009 and 2008 and the statement of changes in equity for 2009 and 2008, were adjusted accordingly.

**Personnel expenses**

In 2010, UBS reclassified certain elements of Other personnel expenses to Variable compensation – other in order to align the presentation with the new FINMA definition of variable compensation. In addition, amounts previously reported under Salaries and variable compensation are presented for the first time on the following separate lines: Salaries, Variable compensation – discretionary bonus, Variable compensation – other and Wealth Management Americas: Financial advisor compensation.

Furthermore, UBS reclassified the pension costs related to bonus to Pension and other post-employment benefit plans. Previously, those amounts were reported under Social security. Prior period amounts have been adjusted accordingly. The change in the presentation did not impact UBS’s personnel expenses. The related amounts are disclosed in the footnotes to Note 6.

**Fair value hierarchy of financial instruments**

From 2010 onwards, UBS considers input data observable and classifies the respective financial instrument as level 2 in the fair value hierarchy when there is an equally offsetting transaction. An offsetting transaction constitutes evidence of an observable market transaction, when it can be demonstrated that the offsetting transactions nullifies substantially all the price risk of the proportion of the offset instrument and the proportion is significant. In cases such as derivatives, where the counterparty’s credit risk is also based on observable inputs, then it can be concluded that all input data are observable. Refer to Note 27b) for more details.

**Effective 2010**

### Improvements to IFRSs 2009

The IASB issued amendments to twelve IFRS standards as part of its annual improvements project in April 2009. UBS adopted the Improvements to IFRSs 2009 on 1 January 2010. The adoption of the amendments did not have a significant impact on UBS’s financial statements.

### Amendments to IAS 39 Financial Instruments: Recognition and Measurement – Eligible Hedged Items

The amendments to IAS 39 were issued in July 2008. The amendments provide additional guidance on the designation of a hedged item. The amendments clarify how the existing principles underlying hedge accounting should be applied in two particular situations: a) a one-sided risk in a hedged item and b) inflation in a financial hedged item. UBS adopted the amendments to IAS 39 on 1 January 2010. The adoption of the amend-
Note 1 Summary of significant accounting policies (continued)

ments to IAS 39 did not have a significant impact on UBS’s financial statements.

IFRS 3 Business Combinations, IAS 27 Consolidated and Separate Financial Statements, and IAS 21 The Effects of Changes in Foreign Exchange Rates

In January 2008, the IASB issued the revised IFRS 3 Business Combinations and amendments to IAS 27 Consolidated and Separate Financial Statements, and IAS 21 The effects of Changes in Foreign Exchange Rates.

The most significant changes under revised IFRS 3 are as follows:

- Contingent consideration should be recognized at fair value as part of the consideration transferred at the acquisition date. Previously, contingent consideration was recognized if, and only if, UBS had a present obligation, the economic outflow was more likely than not and a reliable estimate was determinable.
- Non-controlling interests in an acquiree that are present ownership interests and provide entitlement to a proportionate share of the net assets in the event of liquidation should either be measured at fair value or as the non-controlling interest’s proportionate share of the fair value of net identifiable assets of the entity acquired. All other components of the non-controlling interests are measured at their acquisition-date fair values. The option is available on a transaction-by-transaction basis.
- Transaction costs incurred by the acquirer should be expensed as incurred.

The amendments to IAS 27 and the consequential amendments to IAS 21 require the effects (including foreign exchange translation) of all transactions with non-controlling interests to be recorded in equity if there is no change in control. The standards also specify the accounting when control is lost: any remaining interest in the entity acquired. All other components of the non-controlling interests are measured at their acquisition-date fair values. The option is available on a transaction-by-transaction basis.

Effective in 2009 and earlier

IAS 1 (revised) Presentation of Financial Statements

Effective 1 January 2009, the revised International Accounting Standard (IAS) 1 affected the presentation of owner changes in equity and of comprehensive income. UBS continued to present owner changes in equity in the “statement of changes in equity”, but detailed information relating to non-owner changes in equity, such as foreign exchange translation, cash flow hedges and financial investments available-for-sale, were presented in the “statement of comprehensive income”.

When implementing these amendments as of 1 January 2009, UBS also adjusted the format of its “statement of changes in equity” and replaced the “statement of recognized income and expense” in the financial statements of previous years with a “statement of comprehensive income”.

UBS also re-assessed its accounting treatment of dividends from trust preferred securities. In line with the classification of trust preferred securities as equity instruments, UBS recognizes liabilities for the full dividend payment obligation once a coupon payment becomes mandatory, i.e., when it is triggered by a contractually determined event. In the income statement, the same amount is reclassified from net profit attributable to UBS shareholders to net profit attributable to non-controlling interests.

IFRS 8 Operating Segments

Effective as of 1 January 2009, UBS adopted IFRS 8 Operating Segments which replaced IAS 14 Segment Reporting. Under the requirements of the new standard, UBS’s external segmental reporting is now based on the internal management reporting to the Group Executive Board (or the “chief operating decision maker”), which makes decisions on the allocation of resources and assesses the performance of the reportable segments. Refer to item 33) and Note 2 for further details.

IFRS 7 (revised) Financial Instruments: Disclosures

This standard was revised in March 2009 when the International Accounting Standards Board (IASB) published the amendment “Improving Disclosures about Financial Instruments”. Effective 1 January 2009, the amendment requires enhanced disclosures about fair value measurements and liquidity risk.

The enhanced fair value measurement disclosure requirements include: a fair value hierarchy (i.e. categorization of all financial instruments into levels 1, 2 and 3 based on the relevant definitions); significant transfers between level 1 and level 2; reconciliation of level 3 instruments at the beginning of the period to the ending balance (level 3 movement table); level 3 profit or loss for positions still held at balance sheet date; and sensitivity information for the total position of level 3 instruments and the basis for the calculation of such information.

The amended liquidity risk disclosure requirements largely confirm the previous rules for providing maturity information for non-derivative financial liabilities, but amend the rules for providing maturity information for derivative financial liabilities.

IFRIC 16 Hedges of a Net Investment in a Foreign Operation

IFRIC 16 was issued on 1 October 2008 and became effective on 1 January 2009. IFRIC 16 provides guidance in identifying the foreign currency risks that qualify as a hedged risk in the hedge of a net investment in a foreign operation; where, within a group, hedging instruments that are hedges of a net investment in a foreign operation can be held to qualify for hedge accounting, and how an entity should determine the amounts to be reclassi-
fied from equity to profit or loss for both the hedging instrument and the hedged item. The impact of this interpretation on UBS’s financial statements was immaterial.

**IAS 24 Related Party Disclosures**

In November 2009, the IASB amended IAS 24 Related Party Disclosures with latest possible effective date 1 January 2011. UBS has early adopted the revised requirements in its annual financial statements 2009. The revised standard amends the definition of related parties, in particular, the relationship between UBS and associated companies of UBS’s key management personnel or their close family members. Transactions between UBS and associated companies of UBS key management personnel over which UBS key management personnel does not have control or joint control are no longer considered related-party transactions. Due to the application of the revised guidance, related party transactions disclosed in Note 32e of the annual financial statements 2008 have been significantly reduced. Balances and movements of loans to related parties have been reduced by CHF 668 million as of 31 December 2008 and fees received for services provided by UBS have been reduced by CHF 11 million in 2008.

**IFRS 2 Share-based Payment: Vesting Conditions and Cancellations**

On 1 January 2008, UBS adopted an amendment to IFRS 2 Share-based Payment: Vesting Conditions and Cancellations and fully restated the two comparative prior years. The amended standard clarifies the definition of vesting conditions and the accounting treatment of cancellations. Under the amended standard, UBS is required to distinguish between vesting conditions (such as service and performance conditions) and non-vesting conditions.

The amended standard no longer considers vesting conditions to include certain non-compete provisions.

The impact of this change is that UBS compensation awards are expensed over the period that the employee is required to provide active services in order to earn the award. Post-vesting sale and hedge restrictions and non-vesting conditions are considered when determining grant date fair value. The effect of the restatement on the opening balance sheet at 1 January 2006 was as follows: reduction of retained earnings by approximately CHF 2.3 billion, increase of share premium by approximately CHF 2.3 billion, increase of liabilities (including deferred tax liabilities) by approximately CHF 0.5 billion, and increase of deferred tax assets by approximately CHF 0.5 billion. Net profit attributable to UBS shareholders declined by CHF 863 million in 2007 and by CHF 730 million in 2006. Additional compensation expenses of CHF 797 million and CHF 516 million were recognized in 2007 and 2006, respectively. These additional compensation expenses include awards granted in 2008 for the performance year 2007. The impact of the restatement on total equity as of 31 December 2007 was a decrease of CHF 366 million. Retained earnings as of 31 December 2007 decreased by approximately CHF 3.9 billion, share premium increased by approximately CHF 3.5 billion, liabilities (including deferred tax liabilities) increased by approximately CHF 0.6 billion and deferred tax assets increased by approximately CHF 0.2 billion. The restatement decreased basic and diluted earnings per share for the year ended 31 December 2007 by CHF 0.40 each and for the year ended 31 December 2006 by CHF 0.33 and CHF 0.31, respectively. In order to provide comparative information, these amounts also reflect the retrospective adjustments to shares outstanding in 2007 due to the capital increase and the share dividend paid in 2008.

The additional compensation expense is attributable to the acceleration of expenses related to share-based awards as well as for certain alternative investment vehicle awards and deferred cash compensation awards which contain non-compete provisions and sale and hedge restrictions that no longer qualify as vesting conditions under the amended standard.

**Reclassifications of Financial Assets**

The International Accounting Standards Board published an amendment to International Accounting Standard 39 (IAS 39 Financial Instruments: Recognition and Measurement) on 13 October 2008, under which eligible financial assets, subject to certain conditions being met, may be reclassified out of the *Held for trading* category if the firm had the intent and ability to hold them for the foreseeable future or until maturity.

Although the amendment could have been applied retrospectively from 1 July 2008, UBS decided at the end of October 2008 to apply the amendment with effect from 1 October 2008 following an assessment of the implications on its financial statements. Refer to Note 29b for further details on reclassification of financial assets.
Effective in 2011

Improvements to IFRSs 2010
In May 2010, the IASB issued amendments to seven standards as part of its annual improvements project. UBS will adopt the improvements to IFRSs 2010 as of 1 January 2011. The amendments will not have a material impact on UBS’s financial statements.

IFRIC 14 Prepayments of a Minimum Funding Requirement
In November 2009, the IASB issued the amended IFRIC 14 The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction, which itself is an interpretation of IAS 19 Employee Benefits. The amendment applies in the limited circumstances when an entity is subject to minimum funding requirements and makes an early payment of contributions to cover those requirements. The amendment permits an entity to treat the benefit of such an early payment as an asset. The amendment is effective from 1 January 2011. Early application is permitted. UBS is not affected by this amendment.

Effective in 2012 and later, if not adopted early

IFRS 9 Financial Instruments
In November 2009, the IASB issued IFRS 9 Financial instruments, which includes revised guidance on the classification and measurement of financial assets. In October 2010, the IASB updated IFRS 9 to include guidance on financial liabilities and derecognition of financial instruments and amended IFRS 7 to include disclosures about transferred financial assets. The publication of IFRS 9 represents the completion of the first part of a multi-stage project to replace IAS 39 Financial instruments: Recognition and measurement.

The standard requires all financial assets to be classified on the basis of the entity’s business model for managing the financial assets, and the contractual cash flow characteristics of the financial asset. A financial asset is accounted for at amortized cost only if the following criteria are met: (a) the objective of the business model is to hold the financial asset for the collection of the contractual cash flows, and (b) the contractual cash flows under the instrument solely represent payments of principal and interest. If a financial asset meets the criteria to be measured at amortized cost, it can be designated at fair value through profit or loss under the fair value option, if doing so would significantly reduce or eliminate an accounting mismatch. Non-traded equity instruments may be accounted for at fair value through other comprehensive income (OCI). Such designation is available on initial recognition on an instrument-by-instrument basis and is irrevocable.

There is no subsequent recycling of realized gains or losses from OCI to profit or loss. All other financial assets are measured at fair value through profit or loss.

The accounting and presentation for financial liabilities and for derecognition of financial instruments has been transferred from IAS 39 Financial instruments: Recognition and measurement to IFRS 9. The guidance is unchanged with one exception: the accounting for financial liabilities designated at fair value through profit or loss. The requirements in IAS 39 regarding the classification and measurement of financial liabilities have been retained, including the related application and implementation guidance. The two existing measurement categories for financial liabilities remain unchanged. The criteria for designating a financial liability at fair value through profit or loss also remain unchanged. For financial liabilities designated at fair value through profit or loss, changes in fair value due to changes in an entity’s own credit risk are directly recognized in OCI instead of in profit and loss. There is no subsequent recycling of realized gains or losses from OCI to profit or loss. For financial liabilities that are required to be measured at fair value through profit or loss, i.e., all derivatives and trading portfolio liabilities, all fair value movements will continue to be recognized in profit and loss.

UBS is currently assessing the impact of the new standard on its financial statements. The effective date for mandatory adoption is 1 January 2013, with early adoption permitted. The IFRS 7 amendments are applicable for annual accounting periods beginning on or after 1 July 2011. UBS did not early adopt IFRS 9 for the year ended 31 December 2010.

Amendments to IAS 12 Income Taxes
In December 2010, the IASB issued amendments to IAS 12 Income Taxes to clarify guidance related to the measurement of deferred taxes. IAS 12 requires an entity to measure the deferred tax related to an asset based on whether the entity expects to recover the carrying amount of the asset principally through use or sale. The guidance establishes a rebuttable presumption that recovery of the carrying amount will normally be through sale. As a result of the amendments, SIC-21, Income Taxes – Recovery of Revalued Non-Depreciable Assets, would no longer apply to investment properties carried at fair value. The amendments provide a practical approach for measuring deferred tax liabilities and deferred tax assets when investment property is measured using the fair value model. The amendments also incorporate the guidance contained in SIC-21, which is now withdrawn. The amendments are effective for annual periods beginning on or after 1 January 2012, with early adoption permitted. UBS is currently assessing the impact of the revised standard on its financial statements.
UBS AG is the parent company of the UBS Group (Group). The operational structure of the Group comprises the Corporate Center and four business divisions: Wealth Management & Swiss Bank, Wealth Management Americas, Global Asset Management and the Investment Bank. In 2010, for the purpose of segment reporting, the business division Wealth Management & Swiss Bank was split into two separate reportable segments, namely Wealth Management and Retail & Corporate. As a result of the split, UBS now presents five reportable segments compared with only four reportable segments in 2009. The Corporate Center includes all corporate functions, elimination items as well as the remaining industrial holdings activities and is not considered a business segment. The “Corporate Center” column of the table in Note 2a “Segment reporting” has been renamed “Treasury activities and other corporate items”. Refer to Note 1a 33) “Segment reporting” for more details.

**Wealth Management & Swiss Bank**

Wealth Management & Swiss Bank focuses on delivering comprehensive financial services to high net worth and ultra high net worth individuals around the world – except to those served by Wealth Management Americas – as well as private and corporate clients in Switzerland. Our Wealth Management business unit provides clients in over 40 countries, including Switzerland, with financial advice, products and tools to fit their individual needs. Our Retail & Corporate business unit provides individual and business clients with an array of banking services, such as deposits and lending, and maintains a leading position across its client segments in Switzerland.

**Wealth Management Americas**

Wealth Management Americas provides advice-based solutions through financial advisors who deliver a fully integrated set of products and services specifically designed to address the needs of ultra high net worth, high net worth and core affluent individuals and families. It includes the domestic United States business (Wealth Management US), the domestic Canadian business and international business booked in the United States.

**Global Asset Management**

Global Asset Management is a large-scale asset manager with businesses diversified across regions, capabilities and distribution channels. It offers investment capabilities and styles across all major traditional and alternative asset classes including equities, fixed income, currency, hedge fund, real estate and infrastructure that can also be combined into multi-asset strategies. The fund services unit provides legal fund set-up and accounting and reporting for retail and institutional funds.

**Investment Bank**

The Investment Bank provides securities and other financial products and research in equities, fixed income, rates, foreign exchange and commodities. It also provides advisory services and access to the world’s capital markets for corporate and institutional clients, sovereign and governmental bodies, financial intermediaries, alternative asset managers and private investors.

**Corporate Center**

The Corporate Center provides and manages support and control functions for the Group in areas such as risk control, finance, legal and compliance, funding, capital and balance sheet management, management of non-trading risk, communication and branding, human resources, information technology, real estate, procurement, corporate development and service centres. Most costs and personnel of the Corporate Center are allocated to the business divisions.
Note 2a  Segment reporting (continued)

Transactions between the reportable segments are carried out at internally agreed rates or at arm’s length and are reflected in the performance of each segment. Revenue-sharing agreements are used to allocate external client revenues to a segment and cost-allocation agreements are used to allocate shared costs between the segments.

1 Impairments of financial investments available-for-sale for the year ended 31 December 2010 were as follows: Wealth Management & Swiss Bank CHF 45 million; Global Asset Management CHF 2 million; Investment Bank CHF 41 million; Treasury activities and other corporate items CHF (16) million. The total inter-segment revenues for the Group are immaterial as the majority of the revenues are allocated across the business divisions by means of revenue-sharing agreements.
2 Refer to “Note 38 Reorganizations and disposals” for further information on the impact on performance before tax of restructuring charges, and to “Note 27 Fair value of financial instruments” for further information on the allocation of own credit charges to the Investment Bank.
3 Refer to “Note 16 Goodwill and intangible assets” for further information regarding goodwill and other intangible assets by business division.
4 Refer to “Note 1 Summary of significant accounting policies” for more information on the allocation of additional Corporate Center costs to business divisions from 2010 onwards.
5 The segment assets are based on a third-party view, i.e. the amounts do not include inter-company balances.
Note 2a Segment reporting (continued)

Transactions between the reportable segments are carried out at internally agreed rates or at arm's length and are reflected in the performance of each segment. Revenue-sharing agreements are used to allocate external client revenues to a segment and cost-allocation agreements are used to allocate shared costs between the segments.

1 Impairments of financial investments available-for-sale for the year ended 31 December 2009 were as follows: Wealth Management & Swiss Bank CHF 158 million; Global Asset Management CHF 20 million; Investment Bank CHF 142 million; Treasury activities and other corporate items CHF 29 million. The total inter-segment revenues for the Group are immaterial as the majority of the revenues are allocated across the business divisions by means of revenue-sharing agreements. 2 Refer to "Note 16 Goodwill and intangible assets" for further information regarding goodwill and other intangible assets by business division. 3 Refer to "Note 1 Summary of significant accounting policies" for more information on the allocation of additional Corporate Center costs to business divisions from 2010 onwards. 4 The segment assets are based on a third-party view, i.e. the amounts do not include inter-company balances.
Note 2a Segment reporting (continued)

Transactions between the reportable segments are carried out at internally agreed rates or at arm’s length and are reflected in the performance of each segment. Revenue-sharing agreements are used to allocate external client revenues to a segment and cost-allocation agreements are used to allocate shared costs between the segments.

¹ Impairments of financial investments available-for-sale for the year ended 31 December 2008 were as follows: Wealth Management & Swiss Bank CHF 19 million; Wealth Management Americas CHF 1 million; Global Asset Management CHF 22 million; Investment Bank CHF 121 million; Treasury activities and other corporate items CHF 40 million. The total inter-segment revenues for the Group are immaterial as the majority of the revenues are allocated across the business divisions by means of revenue-sharing agreements. ² Refer to “Note 1 Summary of significant accounting policies” for more information on the allocation of additional Corporate Center costs to business divisions from 2010 onwards. ³ The segment assets are based on a third-party view, i.e. the amounts do not include inter-company balances.
Note 2b  Segment reporting by geographic location

The geographic analysis of operating income and non-current assets is based on the location of the entity in which the transactions and assets are recorded. The divisions of the Group are managed on an autonomous basis worldwide with a focus on cross-divisional collaboration and the interest of our clients to yield the maximum possible profitability by product line for the Group. The geographical analysis of operating income and non-current assets is provided in order to comply with IFRS.

### Income statement notes

#### Note 3 Net interest and trading income

Accounting standards require separate disclosure of *Net interest income* and *Net trading income* (see the tables on this and the next page). This required disclosure, however, does not take into account that net interest and trading income are generated by a range of different businesses. In many cases, a particular business can generate both interest and trading income. Fixed income trading activity, for example, generates both trading profits and coupon income. UBS considers it to be more meaningful to analyze net interest and trading income according to the businesses that drive it. The second table below (Breakdown by businesses) provides information that corresponds to this view: Net income from trading businesses includes both interest and trading income generated by the Investment Bank, including its lending activities, and trading income generated by the other business divisions; Net income from interest margin businesses comprises interest income from the loan portfolios of Wealth Management & Swiss Bank and Wealth Management Americas; Net income from treasury activities and other reflects all income from the Group’s centralized treasury function.

\(^1\) Includes lending activities of the Investment Bank.  
\(^2\) Interest includes forward points on foreign exchange swaps used to manage short-term interest rate risk on foreign currency loans and deposits.  
\(^3\) Includes net interest income on impaired loans and advances of CHF 37 million for 2010, CHF 66 million for 2009 and CHF 42 million for 2008.  
\(^4\) Includes net interest income on cash collateral receivables on derivative instruments and net interest income on swaps.  
\(^5\) Includes interest expense on cash collateral payables on derivative instruments.
Note 3  Net interest and trading income (continued)

For the year ended % change from  

Net trading income¹
Investment Bank equities 2,356 2,462 4,694 (4)
Investment Bank fixed income, currencies and commodities 2,000 (5,455) (35,040)
Other business divisions² 3,115 2,668 4,525 17

Net trading income 7,471 (324) (25,820) 85

of which: net gains/(losses) from financial assets designated at fair value 465 678 (974) (31)
of which: net gains/(losses) from financial liabilities designated at fair value³ (1,001) (6,741) 44,284 85

¹ Refer to the table “Net interest and trading income” on the previous page for the Net income from trading businesses (for an explanation, refer to the corresponding introductory comment).
² Mainly consists of gains and losses from foreign exchange and net trading income from treasury activities.
³ Financial liabilities designated at fair value are to a large extent economically hedged with derivatives and other instruments whose change in fair value is also reported in Net trading income. For more information on own credit refer to “Note 27 Fair value of financial instruments”.

Significant impacts on net trading income

Net trading income in 2010 included a gain of CHF 0.7 billion from credit valuation adjustments for monoline credit protection (CHF 0.8 billion loss in 2009). 2010 Net trading income also included a gain of CHF 0.7 billion from the valuation of UBS’s option to acquire the SNB StabFund’s equity (CHF 0.1 billion gain in 2009).

Refer to the “Risk management and control” section of this report for more information on exposure to monolines and the option to acquire equity of the SNB StabFund.

Note 4 Net fee and commission income

For the year ended % change from  

Equity underwriting fees 1,157 1,590 1,138 (27)
Debt underwriting fees 755 796 818 51

Total underwriting fees 1,912 2,386 1,957 (20)

M&A and corporate finance fees 857 881 1,662 37
Brokers fees¹ 4,930 5,400 7,150 (9)
Investment fund fees 3,898 4,000 5,583 37
Portfolio management and advisory fees 5,959 5,863 7,667 2
Insurance-related and other fees 361 264 317 37

Total securities trading and investment activity fees 17,918 18,794 24,335 (5)

Credit-related fees and commissions 448 339 273 32
Commission income from other services 850 878 1,010 37

Total fee and commission income 19,216 20,010 25,618 40

Brokerage fees paid¹ 1,093 1,231 1,164 (11)
Other¹ 964 1,068 1,524 37

Total fee and commission expense 2,057 2,299 2,689 (11)

Net fee and commission income 17,160 17,712 22,929 (3)
of which: net brokerage fees¹ 3,837 4,169 5,985 (8)

¹ In 2010, UBS corrected the amounts presented in previous periods on the lines Brokerage fees, Brokerage fees paid, Other and Net brokerage fees. Amounts previously disclosed have been decreased as follows: Brokerage fees by CHF 817 million and CHF 1,059 million for the years ended 31 December 2009 and 31 December 2008 respectively; Brokerage fees paid by CHF 517 million and CHF 599 million for the years ended 31 December 2009 and 31 December 2008 respectively; Other and Net brokerage fees by CHF 300 million and CHF 460 million for the years ended 31 December 2009 and 31 December 2008 respectively. The totals of Net fee and commission income and consequently Net profit attributable to UBS shareholders are not affected by this correction.

</tbody>
</table>

¹ In 2010, UBS adjusted the amounts presented in previous periods on the line Other personnel expenses to align the presentation with the new definition by FINMA of variable compensation. Amounts previously disclosed under Other personnel expenses have been decreased by CHF 648 million for the year ended 31 December 2009 and CHF 702 million for the year ended 31 December 2008, with a corresponding increase in Variable compensation – other. ² Starting 2010, UBS presents the pension costs related to cash bonus in Pension and other post-employment benefit plans. Previously those amounts were reported under Social security. Prior periods amounts have been adjusted accordingly as follows: by CHF 47 million for the year ended 31 December 2009 and by CHF 46 million for the year ended 31 December 2008. ³ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure and other variables. It also includes costs related to compensation commitments and advances granted to financial advisors at the time of recruitment, which are subject to vesting requirements.

1 CHF 254 million is related to reclassified assets (securities and other assets) on 31 December 2010 and CHF 1,192 million on 31 December 2009.

Note 10 Cash collateral on securities borrowed and lent, reverse repurchase and repurchase agreements, and derivative instruments

The Group enters into collateralized reverse repurchase and repurchase agreements, securities borrowing and securities lending transactions and derivative transactions that may result in credit exposure in the event that the counterparty to the transaction is unable to fulfill its contractual obligations. The Group controls credit risk associated with these activities by monitoring counterparty credit exposure and collateral values on a daily basis and requiring additional collateral to be deposited with or returned to the Group when deemed necessary.

Note 11 Trading portfolio

The Group trades in debt instruments (including money market paper and tradable loans), equity instruments, precious metals, other commodities and derivatives to meet the financial needs of its customers and to generate revenue. Refer to “Note 23 Derivative instruments and hedge accounting”. The table below represents a pure accounting view. It does not reflect hedges and other risk mitigating factors and the amounts must therefore not be considered risk exposures.

<td>840</td>
</tr>
<tr>
<td><strong>Total financial assets designated at fair value</strong></td>
<td><strong>8,504</strong></td>
<td><strong>10,223</strong></td>
</tr>
</tbody>
</table>

The maximum exposure to credit loss of all items in the above table is equal to the fair value except CHF 856 million as of 31 December 2010 and CHF 840 million as of 31 December 2009 reported in Other financial assets which are generally comprised of equity investments that are not directly exposed to credit risk. The maximum exposure to credit loss as of 31 December 2010 and 31 December 2009 is mitigated by collateral of CHF 3,929 million and CHF 4,845 million, respectively.

The amount by which credit derivatives or similar instruments mitigate the maximum exposure to credit loss of loans and structured loans designated at fair value is as follows:

<table>
<thead>
<tr>
<th>CHF million</th>
<th>31.12.10</th>
<th>31.12.09</th>
</tr>
</thead>
<tbody>
<tr>
<td>Notional amount of loans and structured loans</td>

<td>(94)</td>
<td>(435)</td>
</tr>
</tbody>
</table>

1 Credit derivatives contracts include credit default swaps, total return swaps, and similar instruments. These are generally used to manage credit risk when UBS has a direct credit exposure to the counterparty, which has not otherwise been collateralized.  
2 Current and cumulative changes in the fair value of loans attributable to changes in their credit risk are only calculated for those loans outstanding on the balance sheet date. Current and cumulative changes in the fair value of credit derivatives hedging such loans include all the derivatives which have been used to mitigate the credit risk of these loans since designation at fair value. For loans reported under the fair value option, changes in fair value due to changes in the credit standing of the borrower are calculated using counterparty credit information obtained from independent market sources.

Introduction

As of 31 December 2010, the following four segments carried goodwill: Wealth Management (CHF 1.4 billion), Wealth Management Americas (CHF 3.3 billion), Global Asset Management (CHF 1.4 billion), and Investment Bank (CHF 3.0 billion). For the purpose of testing goodwill for impairment, UBS considers the segments as reported in Note 2a as separate cash-generating units, and determines the recoverable amount of a segment on the basis of value in use.

As of 31 December 2010, equity attributable to UBS shareholders stood at CHF 47 billion, up from CHF 41 billion as of 31 December 2009. UBS’s market capitalization was approximately CHF 59 billion as of 31 December 2010 compared with CHF 57 billion as of 31 December 2009. On the basis of the impairment testing methodology described below, UBS concluded that the year-end 2010 balances of goodwill allocated to its segments remain recoverable.

Methodology for goodwill impairment testing

The recoverable amount is determined using a discounted cash flow model, which uses inputs that consider features of the banking business and its regulatory environment. The recoverable amount is calculated by estimating streams of earnings available to shareholders over the next five years, discounted to their present values. The terminal value reflecting all periods beyond the fifth year is calculated on the basis of the forecast of fifth-year profit, the cost of equity and the long-term growth rate. For the 2010 test, the discount rates and long-term growth rates used to calculate the present values of the cash-generating units remained unchanged. The recoverable amount of a segment is the sum of discounted earnings available to shareholders from the first five individually forecast years and the terminal value.

Assumptions

The model used to determine the recoverable amount is most sensitive to changes in the forecast earnings available to shareholders in years one to five, the cost of equity and to changes in the long-term growth rate. The applied long-term growth rate is based on real growth rates and expected inflation. Earnings available to shareholders are estimated on the basis of forecast results, which take into account business initiatives and planned capital investments. Valuation parameters used within the Group’s impairment test model are linked to external market information, where applicable. Management believes that reasonable changes in key assumptions used to determine the recoverable amounts of all segments will not result in an impairment situation.

Wealth Management Americas

As in prior years, the assessment of the goodwill of the Investment Bank and Wealth Management Americas continued to be a focus. In its review of the year-end 2010 goodwill balance, UBS considered the performance outlook of its Investment Bank and Wealth Management Americas business divisions and the underlying business operations to resolve whether the recoverable amounts for these units cover their carrying amounts, based on the methodology described above. On this basis, UBS concluded that goodwill allocated to the Investment Bank and Wealth Management Americas remains recoverable on 31 December 2010. The conclusion was reached on the basis of the current forecast results and the underlying assumption that the economy will gradually improve and reach an average growth level.

In addition, a stress test was performed employing the same discounted cash flow model. The earnings used were based on an economic stress scenario. Under this economic stress scenario, the key macro economic drivers are severely reduced in the near term, with a gradual recovery thereafter. The stressed values exceeded the carrying values of all business divisions, including the Investment Bank and Wealth Management Americas. However, if the regulatory pressure on the banking industry further intensifies and conditions in the financial markets turn out to be worse than anticipated in our performance forecasts, the goodwill carried in these business divisions may need to be impaired in future periods.

Recognition of any impairment of goodwill would reduce IFRS Equity attributable to UBS shareholders and net profit, but it would not impact cash flows, as well as the BIS Tier 1 capital, BIS total capital, and capital ratios of the UBS Group, as goodwill is required to be deducted from capital under the Basel II capital framework.

</tbody>
</table>
Note 19 Financial liabilities designated at fair value and debt issued (continued)

The Group uses interest rate and foreign exchange derivatives to manage the risks inherent in certain debt issues (held at amortized cost). In certain cases, the Group applies hedge accounting for interest rate risk as discussed in Note 1a) 15) and “Note 23 Derivative Instruments and Hedge Accounting”. As a result of applying hedge accounting, as of 31 December 2010 and 31 December 2009, the carrying value of debt issued was CHF 913 million higher and CHF 600 million higher, respectively, reflecting changes in fair value due to interest rate movements.

The Group issues both CHF and non-CHF denominated fixed-rate and floating-rate debt.

Subordinated debt securities are unsecured obligations of the Group that are subordinated in right of payment to all present and future senior indebtedness and certain other obligations of the Group. As of 31 December 2010 and 31 December 2009, the Group had CHF 8,547 million and CHF 11,244 million, respectively, in subordinated debt. Subordinated debt usually pays fixed interest annually or floating-rate interest based on three-month or six-month London Interbank Offered Rate (LIBOR) and provides for single principal payments upon maturity.

As of 31 December 2010 and 31 December 2009, the Group had CHF 153,730 million and CHF 167,702 million, respectively, in unsubordinated debt (excluding money market paper, compound debt instruments – OTC and loan commitments designated at fair value).

The following table shows the split between fixed-rate and floating-rate debt issues based on the contractual terms. However, it should be noted that the Group uses interest rate swaps to hedge many of the fixed-rate debt issues, which changes their re-pricing characteristics into those of floating-rate debt.

¹ The contractual interest rates on some minor positions of structured products were not considered in the interest rate ranges. The interest rates of these products are up to 35.76%.

The table above indicates fixed interest rate coupons on the Group’s bonds. The high or low coupons generally relate to structured debt issues prior to the separation of embedded derivatives. As a result, the stated interest rate on such debt issues generally does not reflect the effective interest rate the Group is paying to service its debt after the embedded derivative has been separated and, where applicable, the application of hedge accounting.

1 Includes provisions for litigation resulting from security risks and transaction processing risks. 2 Includes litigation resulting from legal, liability and compliance risks. Additionally, includes a provision established in connection with demands for repurchase of US mortgage loans sold or securitized by UBS, as described in section “c) Other contingent liabilities” of this note. 3 Includes reinstatement costs for leasehold improvement which amounted to CHF 122 million on 31 December 2010 (CHF 161 million on 31 December 2009), provisions for onerous lease contracts, provisions for employee benefits (service anniversaries and sabbatical leave) and other items. 4 Includes an amount of CHF 651 million relating to the settlement of the US cross-border case. The respective provision was recognized in 2008.
The UBS Group operates in a legal and regulatory environment that exposes it to significant litigation risks. As a result, UBS (which for purposes of this Note may refer to UBS AG and/or one or more of its subsidiaries, as applicable) is involved in various disputes and legal proceedings, including litigation, arbitration, and regulatory and criminal investigations. Such cases are subject to many uncertainties, and their outcome is often difficult to predict, including the impact on operations or on the financial statements, particularly in the earlier stages of a case. In certain circumstances, to avoid the expense and distraction of legal proceedings, UBS may, based on a cost-benefit analysis, enter into a settlement even though UBS denies any wrongdoing. The Group makes provisions for cases brought against it when, in the opinion of management after seeking legal advice, it is probable that a liability exists, and the amount can be reliably estimated.

Certain potentially significant legal proceedings or threatened proceedings as of 31 December 2010 are described below. In some cases we provide the amount of damages claimed, the size of a transaction or other information in order to assist investors in considering the magnitude of any potential exposure. We are unable to provide an estimate of the possible financial effect of particular claims or proceedings (where the possibility of an outflow is more than remote) beyond the level of current reserves established. Doing so can be expected to prejudice seriously our position in these matters and would require us to provide speculative legal assessments as to claims and proceedings which involve unique fact patterns or novel legal theories, have not yet been initiated or are at early stages of adjudication, or as to which alleged damages have not been quantified by the claimant. In many cases a combination of these factors impedes our ability to estimate the financial effect of contingent liabilities.

1) Municipal Bonds

In November 2006, UBS and others received subpoenas from the Antitrust Division of the US Department of Justice (DOJ) and the US Securities and Exchange Commission (SEC) seeking information relating to the investment of proceeds of municipal bond issuances and associated derivative transactions. In addition, various state Attorneys General have issued subpoenas seeking similar information. The investigations are ongoing, and UBS is cooperating. Several putative class actions also have been filed in Federal District Courts against UBS and numerous other firms. In the SEC investigation, on 4 February 2008, UBS received a “Wells notice” advising that the SEC staff is considering recommending that the SEC bring a civil action against UBS in connection with the bidding of various financial instruments associated with municipal securities. In December 2010, three former UBS employees were indicted in connection with the Federal criminal antitrust investigation. Discussions with the SEC, DOJ and a number of state Attorneys General are ongoing.

2) Auction Rate Securities

UBS was the subject of an SEC investigation and state regulatory actions relating to the marketing and sale of auction rate securities (ARS) to clients, and to UBS’s role and participation in ARS auctions and underwriting of ARS. UBS was also named in several putative class actions and individual civil suits and arbitrations. The regulatory actions and investigations and the civil proceedings followed the disruption in the markets for these securities and related auction failures since mid-February 2008. At the end of 2008 UBS entered into settlements with the SEC, the New York Attorney General (NYAG) and the Massachusetts Securities Division whereby UBS agreed to offer to buy back ARS from eligible customers within certain time periods, the last of which began on 30 June 2010, and to pay penalties of USD 150 million (USD 75 million to the NYAG, USD 75 million to the other states). UBS’s settlement is largely in line with similar industry regulatory settlements. UBS has settled with the majority of states and is continuing to finalize settlements with the rest. The fines being paid in these state settlements are being charged against the USD 150 million provision that was established in 2008. The SEC continues to investigate individuals affiliated with UBS regarding the trading in ARS and disclosures. During the third quarter of 2010, a claimant alleging consequential damages from the illiquidity of ARS was awarded approximately USD 80 million by an arbitration panel and UBS has booked a provision of CHF 78 million relating to this case. UBS moved in state court to vacate the award and oral argument was heard on that motion in December 2010. UBS is the subject of other pending arbitration and litigation claims by clients and issuers relating to ARS.

3) Inquiries Regarding Cross-Border Wealth Management Businesses

Following the disclosure and the settlement of the US cross-border matter, tax and regulatory authorities in a number of countries have made inquiries and served requests for information located in their respective jurisdictions relating to the cross-border wealth management services provided by UBS and other financial institutions. UBS is cooperating with these requests within the limits of financial privacy obligations under Swiss and other applicable laws.

4) Matters Related to the Credit Crisis

UBS is responding to a number of governmental inquiries and investigations and is involved in a number of litigations, arbitrations and disputes related to the credit crisis and in particular
Note 21 Provisions and contingent liabilities (continued)

mortgage-related securities and other structured transactions and derivatives. In particular, the SEC is investigating UBS’s valuation of super senior tranches of collateralized debt obligations (CDOs) during the third quarter of 2007 and UBS’s reclassification of financial assets pursuant to amendments to IAS 39 during the fourth quarter of 2008. UBS has provided documents and testimony to the SEC and is continuing to cooperate with the SEC in its investigation. UBS has also communicated with and has responded to other inquiries by various governmental and regulatory authorities, including the Swiss Financial Market Supervisory Authority (FINMA), the UK Financial Services Authority (FSA), the SEC, the US Financial Industry Regulatory Authority (FINRA), the Financial Crisis Inquiry Commission (FCIC), the New York Attorney General, and the US Department of Justice, concerning various matters related to the credit crisis. These matters concern, among other things, UBS’s (i) disclosures and write-downs, (ii) interactions with rating agencies, (iii) risk control, valuation, structuring and marketing of mortgage-related instruments, and (iv) role as underwriter in securities offerings for other issuers.

5) Lehman Principal Protection Notes

From March 2007 through September 2008, UBS sold approximately USD 1 billion face amount of structured notes issued by Lehman Brothers Holdings Inc. (“Lehman”), a majority of which were referred to as “principal protection notes,” reflecting the fact that while the notes’ return was in some manner linked to market indices or other measures, some or all of the investor’s principal was an unconditional obligation of Lehman as issuer of the notes. UBS has been named along with other defendants in a putative class action alleging materially misleading statements and omissions in the prospectuses relating to these notes and asserting claims under US securities laws. UBS has also been named in numerous individual civil suits and customer arbitrations (some of which have resulted in settlements or adverse judgments), was named in a proceeding brought by the New Hampshire Bureau of Securities, and is responding to investigations by other state regulators and FINRA relating to the sale of these notes to UBS customers. The customer litigations and regulatory investigations relate primarily to whether UBS adequately disclosed the risks of these notes to its customers.

6) Claims Related to Sales of RMBS and Mortgages

From 2002 through about 2007, UBS was a substantial underwriter and issuer of US residential mortgage-backed securities (RMBS). UBS has been named as a defendant relating to its role as underwriter and issuer of RMBS in more than 20 lawsuits relating to at least USD 39 billion in original face amount of RMBS underwritten or issued by UBS. Most of the lawsuits are in their early stages. Many have not advanced beyond the motion to dismiss phase; some are in the early stages of discovery. Of the original face amount of RMBS at issue in these cases, approximately USD 4.5 billion was issued in offerings in which a UBS subsidiary transferred underlying loans (the majority of which were purchased from third party originators) into a securitization trust and made representations and warranties about those loans. The remaining USD 34.5 billion of RMBS to which these cases relate was issued in third-party securitizations where UBS acted as underwriter. In connection with most of the claims included in this latter category, UBS currently expects to be indemnified by the issuers against any loss or liability. These RMBS-related claims include cases in which UBS is named as a defendant in litigation by insurers of RMBS seeking recovery of insurance paid to RMBS investors. These insurers allege that UBS and other RMBS underwriters aided and abetted misrepresentations and fraud by RMBS issuers, and claim equitable and contractual subrogation rights. UBS has also been contacted by certain government-sponsored enterprises requesting that UBS repurchase USD 2 billion of securities issued in UBS-sponsored RMBS offerings.

As described below under “c) Other contingent liabilities”, UBS also has contractual obligations to repurchase US residential mortgage loans as to which its representations made at the time of transfer prove to have been materially inaccurate. Contested loan repurchase demands relating to loans with an initial principal balance of USD 30 million are the subject of litigation.

7) Claims Related to UBS Disclosure

A putative consolidated class action has been filed in the United States District Court for the Southern District of New York against UBS, a number of current and former directors and senior officers and certain banks that underwrote UBS’s May 2008 Rights Offering (including UBS Securities LLC) alleging violation of the US securities laws in connection with the firm’s disclosures relating to its positions and losses in mortgage-related securities, its positions and losses in auction rate securities, and its US cross-border business. Defendants have moved to dismiss the complaint for failure to state a claim. UBS, a number of senior officers and employees and various UBS committees have also been sued in a putative consolidated class action for breach of fiduciary duties brought on behalf of current and former participants in two UBS Employee Retirement Income Security Act (ERISA) retirement plans in which there were purchases of UBS stock. Defendants have moved to dismiss the ERISA complaint for failure to state a claim.

8) Madoff

In relation to the Bernard L. Madoff Investment Securities LLC (BMIS) investment fraud, UBS AG, UBS (Luxembourg) SA and certain other UBS subsidiaries have been subject to inquiries by a number of regulators, including FINMA and the Luxembourg Commission de Surveillance du Secteur Financier (CSSF). Those inquiries concerned two third-party funds established under Lux-
Provisions and contingent liabilities (continued)

embourg law, substantially all assets of which were with BMIS, as well as certain funds established under offshore jurisdictions with either direct or indirect exposure to BMIS. These funds now face severe losses, and the Luxembourg funds are in liquidation. The last reported net asset value of the two Luxembourg funds before revelation of the Madoff scheme was approximately USD 1.7 billion in the aggregate, although that figure likely includes fictitious profit reported by BMIS. The documentation establishing both funds identifies UBS entities in various roles including custodian, administrator, manager, distributor and promoter, and indicates that UBS employees serve as board members. Between February and May 2009 UBS (Luxembourg) SA responded to criticisms made by the CSSF in relation to its responsibilities as custodian bank and demonstrated to the satisfaction of the CSSF that it has the infrastructure and internal organization in place in accordance with professional standards applicable to custodian banks in Luxembourg. In December 2009 and March 2010 the liquidators of the two Luxembourg funds filed claims on behalf of the funds against UBS entities, non-UBS entities and certain individuals including current and former UBS employees. The amounts claimed are approximately EUR 890 million and EUR 305 million respectively. In addition, a large number of alleged beneficiaries have filed claims against UBS entities (and non-UBS entities) for purported losses relating to the Madoff scheme. The majority of these cases are pending in Luxembourg, where appeals have been filed against the March 2010 decisions of the court in which the claims in a number of test cases were held to be inadmissible. In the US, the BMIS Trustee has filed claims against UBS entities, amongst others, in relation to the two Luxembourg funds and one of the offshore funds. A claim was filed in November 2010 against 23 defendants including UBS entities, the Luxembourg and offshore funds concerned and various individuals, including current and former UBS employees. The total amount claimed against all defendants is no less than USD 2 billion. A second claim was filed in December 2010 against 16 defendants including UBS entities and the Luxembourg fund concerned. The total amount claimed against all defendants is not less than USD 555 million. In Germany, certain clients of UBS are exposed to Madoff-managed positions through third-party funds and funds administered by UBS entities in Germany. A small number of claims have been filed with respect to such funds.

9) Transactions with City of Milan and Other Italian Public Sector Entities

In January 2009, the City of Milan filed civil proceedings against UBS Limited, UBS Italia SIM Spa and three other international banks in relation to a 2005 bond issue and associated derivatives transactions entered into with the City of Milan between 2005 and 2007. The claim is to recover alleged damages in an amount which will compensate for terms of the related derivatives which the City claims to be objectionable. In the alternative, the City seeks to recover alleged hidden profits asserted to have been made by the banks in an amount of approximately EUR 88 million (of which UBS Limited is alleged to have received approximately EUR 16 million) together with further damages of not less than EUR 150 million. The claims are made against all of the banks on a joint and several basis. In addition, two current UBS employees and one former employee, together with employees from other banks, a former City officer and a former adviser to the City, are facing a criminal trial for alleged “aggravated fraud” in relation to the City’s 2005 bond issue and the execution, and subsequent restructuring, of certain related derivative transactions. The primary allegation is that UBS Limited and the other international banks fraudulently obtained hidden and/or illegal profits by entering into the derivative contracts with the City of Milan. The banks also face an administrative charge of failing to have in place a business organizational model to avoid the alleged misconduct by employees, the sanctions for which could include a limitation on activities in Italy. The City has separately asserted claims for damages against UBS Limited and UBS individuals in relation to this alleged failure. A number of transactions with other public entity counterparties in Italy have also been called into question or become the subject of legal proceedings and claims for damages and other awards. These include derivative transactions with the Regions of Calabria, Tuscany, Lombardy and Lazio and the City of Florence. UBS has itself issued proceedings before English courts in connection with a number of derivative transactions with Italian public entities, including some of those mentioned above, aimed at obtaining declaratory judgments as to the legitimacy of UBS’s behavior.

10) HSH Nordbank AG (HSH)

HSH has filed an action against UBS in New York State court relating to USD 500 million of notes acquired by HSH in a synthetic CDO transaction known as North Street Referenced Linked Notes, 2002-4 Limited (NS4). The notes were linked through a credit default swap between the NS4 issuer and UBS to a reference pool of corporate bonds and asset-backed securities. HSH alleges that UBS knowingly misrepresented the risk in the transaction, sold HSH notes with “embedded losses”, and improperly profited at HSH’s expense by misusing its right to substitute assets in the reference pool within specified parameters. HSH is seeking USD 500 million in compensatory damages plus pre-judgment interest. The case was initially filed in 2008. Following orders issued in 2008 and 2009, in which the court dismissed most of HSH’s claims and its punitive damages demand and later partially denied a motion to dismiss certain repleaded claims, the claims remaining in the case are for fraud, breach of contract and breach of the implied covenant of good faith and fair dealing. Both sides have appealed the court’s most recent partial dismissal order, and a decision on the appeal is pending.
Note 21 Provisions and contingent liabilities (continued)

11) Kommunale Wasserwerke Leipzig GmbH (KWL)

In 2006 and 2007, KWL entered into a series of managed Credit Default Swap transactions with bank swap counterparties, including UBS. Under the CDS contracts between KWL and UBS, the last of which were terminated by UBS on 18 October 2010, a net sum of approximately USD 138 million has fallen due from KWL but not been paid. In January 2010, UBS issued proceedings in the English High Court against KWL seeking various declarations from the English court, in order to establish that the swap transaction between KWL and UBS is valid, binding and enforceable as against KWL. On 15 October 2010, the English court dismissed an application by KWL contesting its jurisdiction, and ruled that it has jurisdiction and will hear the proceedings. On 18 October 2010, UBS issued a further claim against KWL in the English court seeking declarations concerning the validity of UBS's early termination on that date of the remaining CDS with KWL. On 11 November 2010, the English Supreme Court ruled in a case concerning similar jurisdictional issues, but not involving UBS, that certain questions should be referred to the European Court of Justice. Thereafter, KWL was granted permission to appeal certain jurisdictional aspects of its claim, and the court ordered a temporary stay of the proceedings related to UBS's claim for a declaration as to validity. In March 2010, KWL issued proceedings in Leipzig, Germany, against UBS and other banks involved in these contracts, claiming that the swap transactions are void and not binding on the basis of KWL's allegation that KWL did not have the capacity or the necessary internal authorization to enter into the transactions and that the banks knew this. UBS is contesting the claims and has also contested the jurisdiction of the Leipzig court. The Leipzig court indicated in August 2010 that it did not have jurisdiction over KWL's claim. Subsequently, KWL made a further submission in October 2010 making additional allegations including fraudulent collusion by UBS employees. On 15 February 2011, the Leipzig court proposed that the proceedings in Leipzig be stayed against UBS and the other banks pending the outcome of the appeal on the jurisdiction aspects in England.

The other two banks that entered into CDS transactions with KWL entered into back-to-back CDS transactions with UBS. In April 2010, UBS issued separate proceedings in the English High Court against those bank swap counterparties seeking declarations as to the parties’ obligations under those transactions. The aggregate amount that UBS contends is outstanding under those transactions is approximately USD 189 million. These English proceedings are also currently stayed.

It is reported that in January 2011, the former managing director of KWL and two financial advisers were convicted on criminal charges related to certain KWL transactions, including swap transactions with UBS and other banks.

12) Puerto Rico

The SEC has been investigating UBS's secondary market trading and associated disclosures involving shares of closed-end funds managed by UBS Asset Managers of Puerto Rico, principally in 2008 and 2009. In November 2010, the SEC issued a “Wells notice” to two UBS subsidiaries, advising them that the SEC staff is considering whether to recommend that the SEC bring a civil action against them relating to these matters. We believe that the negative financial results, if any, to shareholders of the funds who traded their shares through UBS during the relevant periods were less than USD 5 million in the aggregate. There is, however, no assurance that the SEC’s staff will agree with UBS's analysis.

13) LIBOR

UBS has received subpoenas from the SEC, the US Commodity Futures Trading Commission and the US Department of Justice in connection with investigations regarding submissions to the British Bankers’ Association, which sets LIBOR rates. UBS understands that the investigations focus on whether there were improper attempts by UBS, either acting on its own or together with others, to manipulate LIBOR rates at certain times. In addition, UBS has received an order to provide information to the Japan Financial Supervisory Agency concerning similar matters. UBS is conducting an internal review and is cooperating with the investigations.

c) Other contingent liabilities

Demands Related to Sales of Mortgages and RMBS

For several years prior to the crisis in the US residential mortgage loan market, UBS sponsored securitizations of US residential mortgage-backed securities (RMBS) and was a purchaser and seller of US residential mortgages. A subsidiary of UBS, UBS Real Estate Securities Inc. (“UBS RESI”), acquired pools of residential mortgage loans from originators and (through an affiliate) deposited them into securitization trusts. In this manner, from 2004 through 2007 UBS RESI sponsored approximately USD 80 billion in RMBS, based on the original principal balances of the securities issued. The overall market for privately issued US RMBS during this period was approximately USD 3.9 trillion.

UBS RESI also sold pools of loans acquired from originators to third-party purchasers. These whole loan sales during the period 2004 through 2007 totaled approximately USD 19 billion in origin principal balance.

UBS was not a significant originator of US residential loans. A subsidiary of UBS originated approximately USD 1.5 billion in US residential mortgage loans during the period in which it was active from 2006 to 2008, and securitized less than half of these loans.
Note 21 Provisions and contingent liabilities (continued)

When UBS acted as an RMBS sponsor or mortgage seller, it generally made certain representations relating to the characteristics of the underlying loans. In the event of a material breach of these representations, UBS was in most cases contractually obligated to repurchase the loans to which they related or to indemnify certain parties against losses. UBS has been notified by certain institutional purchasers and insurers of mortgage loans and RMBS that possible breaches of representations may entitle the purchasers to require that UBS repurchase the loans or to other relief. UBS has received relatively few repurchase demands and has repurchased only a small fraction of the underlying loans.

In the period from 2006 through 2009, UBS received demands to repurchase loans having an original principal balance of approximately USD 356 million in the aggregate. Of that principal balance of USD 356 million, UBS has repurchased or agreed to repurchase loans accounting for about 5%. Repurchase demands accounting for about 45% were rescinded after rebuttal by UBS. Demands accounting for a further 41% either were rebutted by UBS but not rescinded (and are the subject of ongoing discussions) or were not pursued by the party making the demand. Repurchase demands accounting for about 9% are the subject of ongoing litigation.

In 2010, UBS received demands to repurchase additional loans having an original principal balance of approximately USD 350 million. Of that principal balance of USD 350 million, UBS has agreed to repurchase loans accounting for about 12%, repurchase demands accounting for about 67% have been rebutted by UBS but not rescinded, UBS continues to review repurchase demands and market uncertainties as well as possible differences in the characteristics of loans that may be the subject of future demands compared to those that have been the subject of past demands.

In most instances in which UBS would be required to repurchase loans or indemnify against losses due to misrepresentations, UBS would be able to assert demands against third-party loan originators who provided representations when selling the related loans to UBS. However, many of these third parties are insolvent or no longer exist. UBS estimates that, of the total original principal balance of loans sold or securitized by UBS from 2004 through 2007, less than 50% was purchased from third-party originators that remain solvent. In respect of loans that UBS has in turn asserted indemnity or repurchase demands against third parties for loans with an aggregate original principal balance of USD 29 million. Only a small number of UBS’s demands have been resolved, and UBS has not recognized any asset in respect of the unresolved demands.

We cannot reliably estimate the level of future repurchase demands, and do not know whether UBS’s past success rate in rebutting such demands will be a good predictor of future success. We also cannot reliably estimate the timing of any such demands.

As described above under “b) Litigation and regulatory matters”, UBS is also subject to claims and threatened claims in connection with its role as underwriter and issuer of RMBS, and certain loan repurchase demands are also the subject of litigation.
Financial information
Notes to the consolidated financial statements

Note 22 Income taxes

The deferred tax benefit reflects the recognition of additional deferred tax assets in respect of tax losses and temporary differences in a number of foreign locations including the US (CHF 1,161 million) and Japan (CHF 98 million), taking into account updated forecast taxable profit assumptions over the five-year horizon used for recognition purposes. This was partly offset by a Swiss net deferred tax expense as Swiss tax losses for which deferred tax assets have previously been recognized were used against profits for the year (tax expense of CHF 1,409 million), which was itself partly offset by an upwards revaluation of Swiss deferred tax assets taking into account revised forecast profit assumptions (tax benefit of CHF 741 million).

The current tax expense relates to tax expenses in respect of taxable profits in the Group partly offset by tax benefits of CHF 261 million arising from the agreement of prior year positions with tax authorities in various locations. In addition, there is a deferred tax expense of CHF 3 million relating to prior years. The net tax benefits relating to prior years were therefore CHF 258 million.

The Group made net corporate income tax payments, including domestic and foreign taxes, of CHF 498 million, CHF 505 million and CHF 887 million in 2010, 2009 and 2008 respectively.

The components of operating profit before tax, and the differences between income tax expense reflected in the financial statements and the amounts calculated at the Swiss statutory rate, are as follows:

The deferred tax assets recognized as of 31 December 2010 in respect of tax losses have been based on profitability assumptions over the five-year horizon. The expected future profitability is based on business plan assumptions, as adjusted to take into account the recognition criteria of IAS 12. If the business plan earnings and assumptions in future periods substantially deviate from the current assumptions, the amount of deferred tax assets may need to be adjusted in the future.

As of 31 December 2010, tax losses totaling CHF 51,355 million which are not recognized as deferred tax assets are available to be offset against future taxable income. As of 31 December 2009, there were tax losses of CHF 72,313 million, which were not recognized as deferred tax assets and were available to be offset against future taxable income and potential tax adjustments. The tax losses not recognized reduced during 2010 because of the utilization against profits for the year, the increased recognition of deferred tax assets for losses brought forward, foreign exchange rate effects on the Swiss franc value of overseas losses and a change as of 31 December 2010 as compared to the prior year in terms of presenting the unrecognized tax losses net of any potential tax adjustments.

The tax losses not recognized as deferred tax assets as of 31 December 2010 expire as follows:

Note 22  Income taxes (continued)

In general, Swiss tax losses can be carried forward for seven years, US federal tax losses for 20 years and UK and Jersey tax losses for an unlimited period.

The Group provides for deferred income taxes on undistributed earnings of subsidiaries except to the extent that those earnings are indefinitely invested. As of 31 December 2010, no such earnings were treated as indefinitely invested.

For the reasons set out in Note 33, as compared to UBS's fourth quarter 2010 report issued on 8 February 2011, the tax benefit for the year in the income statement is CHF 320 million higher, the deferred tax benefit recognized in equity is CHF 315 million lower and deferred tax assets recognized at 31 December 2010 are CHF 5 million higher.

Note 23  Derivative instruments and hedge accounting

Derivatives: overview

A derivative is a financial instrument, the value of which is derived from the value of some other variable ("underlying"). These underlyings may be indices, exchange or interest rates, or the value of shares, commodities, bonds, or other financial instruments. The majority of derivative contracts are negotiated with respect to notional amounts, as well as tenor, price and settlement mechanisms, as is customary with other financial instruments.

The notional amount of a derivative is generally the quantity of the underlying instrument on which the derivative contract is based, and is the reference against which changes in the value of the derivative are measured. Notional values in themselves are generally not a direct indication of the values which are exchanged between parties, and are therefore not a direct measure of risk or financial exposure, but are viewed as an indication of the volume of types of derivatives entered into by the Group.

Over-the-counter (OTC) contracts are usually traded under an International Swaps and Derivatives Association (ISDA) master trading agreement (MTA) between UBS and its counterparties. Such contracts are negotiated directly with counterparties, at terms agreed between those parties, and will have industry-standard settlement mechanisms prescribed by ISDA. Other derivative contracts are standardized in terms of their amounts and settlement dates, and are bought and sold on organized exchanges; the latter are referred to as exchange-traded derivatives (ETD) contracts. Exchanges offer the benefits of pricing transparency, daily settlement of changes in value at the exchange, and consequently reduced credit risk. In 2010, industry norms have resulted in increased use of exchanges in favor of OTC trading and settlement mechanisms, a trend which is expected to continue.

Derivative instruments which are transacted in the OTC market are carried at fair value on the face of the balance sheet and classified as Positive replacement values and Negative replacement values, both on the balance sheet, and in the notes to the accounts. Derivative instruments which trade at an exchange are classified as either Due from or Due to banks and customers. The treatment of exchange-traded derivatives in this manner is an indication the Group has a receivable from, or payable to, an exchange for the change in fair value from the previous day.

Products which receive this treatment are futures contracts, 100%-daily margined exchange-traded options, interest rate swaps transacted with the London Clearing House, and certain credit derivative contracts.

Principles and techniques applied in the measurement of fair value derivative instruments are discussed in Note 27a). Positive replacement values represent the amount the Group would receive if the derivative contract were settled in full on the balance sheet date. Negative replacement values indicate the value at which the Group would extinguish its obligations in respect of the underlying contract, were it able and required to do so. It is not industry standard for derivative contracts to be settled or extinguished before their maturity, as stated in, and governed by, ISDA or the applicable exchange.

All contracts at an exchange are settled net, with the net receivable or payable, as reported by the applicable exchange, recorded on the balance sheet. The Group may avail itself of netting provisions for OTC contracts, which do not settle via exchange, if all necessary conditions exist. Those conditions are: contracts with the same legal counterparty; legally enforceable rights to set off amounts due; common maturity dates; and an intention to settle net, which is evidenced by current practice. Changes in the replacement values of derivatives transacted in trading businesses are recorded in net trading income, unless the derivatives are designated and effective as hedging instruments in certain types of hedge accounting relationships as described in “Note 1a) 15) Derivative instruments and hedge accounting”.

Types of derivative instruments

The Group uses the following derivative financial instruments for both trading and hedging purposes. Through the use of the products listed below the Group is engaged in extensive high volume market making and client facilitation trading referred to as the flow business. Measurement techniques applied to determine the fair value of each product type are described in Note 27c).

The main types of derivative instruments used by the Group are:

- Options and warrants: options and warrants are contractual agreements under which, typically, the seller (writer) grants the purchaser the right, but not the obligation, either to buy (call option) or to sell (put option) by or at a set date, a specified
quantity of a financial instrument or commodity at a predetermined price. The purchaser pays a premium to the seller for this right. Options involving more complex payment structures are also transacted. Options may be traded in the OTC market or on a regulated exchange and may be traded in the form of a security (warrant).

- **Swaps**: Swaps are transactions in which two parties exchange cash flows on a specified notional amount for a predetermined period.

- **Forwards and futures**: Forwards and futures are contractual obligations to buy or sell financial instruments or commodities on a future date at a specified price. Forward contracts are tailor-made agreements that are transacted between counterparties in the OTC market, whereas futures are standardized contracts transacted on regulated exchanges.

- **Cross-currency**: Cross-currency swaps involve the exchange of interest payments based on two different currency principal balances and reference interest rates and generally also entail exchange of principal amounts at the start and/or end of the contract. Most cross-currency swaps are traded in the OTC market.

The main underlying products used by the Group are:

- **Interest rate contracts**: Interest rate products include interest rate swaps, swaptions and caps and floors.

- **Credit derivatives**: Credit default swaps (CDSs) are the most common form of a credit derivative, under which the party buying protection makes one or more payments to the party selling protection in exchange for an undertaking by the seller to make a payment to the buyer following a credit event (as defined in the contract) with respect to a third-party credit entity (as defined in the contract). Settlement following a credit event may be a net cash amount or cash in return for physical delivery of one or more obligations of the credit entity and is made regardless of whether the protection buyer has actually suffered a loss. After a credit event and settlement, the contract is terminated. An elaboration of credit derivatives is included in a separate section below.

- **Total return swaps (TRSs)**: TRSs are employed in both the Investment Bank’s fixed income and equity trading businesses with underlyings which are generally equity or fixed income indices, loans or bonds. TRSs are structured with one party making payments based on a set rate, either fixed or variable, and the other party making payments based on the return of an underlying asset, which includes both the profit or loss it generates and any changes in its value.

- **Foreign exchange contracts**: Foreign exchange contracts will include spot, forward and cross-currency swaps and options and warrants. Forward purchase and sale currency contracts are typically executed to meet customer needs and for trading and hedging purposes.

- **Equity/Index contracts**: The Group uses equity derivatives linked to single names, indices and baskets of single names and indices. The indices used may be based on a standard market index, or may be defined by UBS. The product types traded include vanilla listed derivatives, both options and futures, total return swaps, forwards and exotic OTC contracts.

- **Commodities contracts**: The Group has an established commodity derivatives trading business, which includes the commodity index and the recently added flow business. The index business is a client facilitation business trading exchange traded funds, OTC swaps and options on commodity indices. The underlying indices cover third party and UBS defined indices such as the UBS Bloomberg Constant Maturity Commodity Index and the Dow Jones UBS Commodity indices. The flow business is investor led and incorporates both ETD and vanilla OTC products, for which the underlying covers the agriculture, base metals and energy sectors. All of the flow trading is cash settled with no physical delivery of the underlying.

- **Precious metals**: The Group has a well established precious metals ability in both flow and non-vanilla OTC products incorporating both physical and non-physical trading. The flow business is investor led and products include ETD, vanilla OTCs and certain non-vanilla OTCs. The vanilla OTCs are in forwards, swaps and options. The non-vanilla OTC business relates to cash settled forwards similar in nature to non deliverable forwards, meaning there is no physical delivery of the underlying.

**Usage of derivative instruments at UBS**

Derivatives transacted for trading purposes

Most of the Group’s derivative transactions relate to sales and trading activities. Sales activities include the structuring and marketing of derivative products to customers to enable them to take, transfer, modify or reduce current or expected risks. Trading activities include market making, positioning and arbitrage activities. Market making involves quoting bid and offer prices to other market participants with the intention of generating revenues based on spread and volume. Positioning means managing market risk positions with the expectation of profiting from favorable movements in prices, rates or indices. Arbitrage activities involve identifying and profiting from price differentials between the same product in different markets or the same economic factor in different products.

**Detailed example: Credit derivatives**

UBS is an active dealer in the fixed income market, including CDSs and related products, with respect to a large number of issuer’s securities. The primary purpose of these activities is for the benefit of UBS’s clients (market making) and to a lesser extent creating new credit exposures taken for UBS’s own trading purposes (proprietary trading).

Market making activity consists of buying and selling single-name CDSs, index CDSs, loan CDSs and related referenced cash instruments to facilitate client trading activity. Proprietary trading
Note 23 Derivative instruments and hedge accounting (continued)

consists of trading in single-name CDSS, index CDSS and loan CDSSs to capitalize on pricing discrepancies between various credit instruments (bonds, loans and equities) across investment grade, high-yield and emerging markets.

UBS actively utilizes CDSS to economically hedge specific counterparty credit risks in its accrual loan portfolio and off balance sheet loan portfolio (including loan commitments) with the aim of reducing concentrations in individual names, sectors or specific portfolios. In addition, UBS actively utilizes CDSS to economically hedge specific counterparty credit risks in its OTC derivative portfolios including financial instruments which are designated at fair value through profit or loss.

In 2009, UBS’s strategy with respect to CDSS trading was the reduction in scope and scale of the firm’s structured credit risk transfer products, proprietary credit trading, and synthetic assets securitization activities, a continuation of strategic decisions made in 2008. In 2010, market innovation and client demand for exposure to related products resulted in an expansion of structured activities and continuation of the Bank’s CDSS flow trading. These activities include market making on behalf of clients in index, multi-name index, swap index option, and first-to-default CDSS products. Where applicable, these products may form part of structured arrangements with clients seeking exposure to specific risks.

The value of protection bought and sold is not in isolation a measure of UBS’s credit risk. Counterparty relationships are viewed in terms of the total outstanding credit risk, which relates to other instruments in addition to CDSSs, and in connection with collateral arrangements in place.

As of 31 December 2010, the total notional value of protection bought was CHF 1,195 billion (CHF 39 billion and CHF 17 billion Positive replacement values and Negative replacement values, respectively) and the total notional value of protection sold was CHF 1,118 billion (CHF 17 billion and CHF 34 billion Positive replacement values and Negative replacement values, respectively).

UBS’s credit derivatives are usually traded as OTC contracts. During 2009 a number of initiatives were launched in both the US and Europe to establish centralized clearing solutions for OTC CDSS contracts (exchange cleared derivatives), with the aim of reducing counterparty risk. UBS, along with other dealer members, continued to participate in these initiatives throughout 2010.

A significant portion of UBS’s credit derivatives are traded under an ISDA MTA between UBS and its counterparty. UBS’s CDSS trades are also documented using industry standard forms of documentation published by ISDA or equivalent terms documented in a bespoke (i.e. tailored) agreement. Those forms and agreements use standardized terms that form the basis for market conventions related to the types of credit events that would trigger performance (i.e. payment) under a CDSS.

The types of credit events that would require UBS to perform under a CDSS contract are subject to agreement between the parties at the time of the transaction. However, nearly all transactions are traded using credit events that are applicable under certain market conventions based on the type of reference entity to which the transaction relates. Applicable credit events by market conventions include “bankruptcy”, “failure to pay”, “restructuring”, “obligation acceleration” and “repudiation/moratorium”.

Credit Derivatives: Recourse provisions
UBS uses standardized agreements and forms as the basis for its credit derivative contracts. Those agreements and forms do not contain recourse provisions that would enable UBS to recover from third parties any amounts paid out by UBS (i.e. this is the case where a credit event occurs and UBS is required to make payment under a CDSS).

Contingent features of derivative liabilities
Based on UBS’s credit ratings as of 31 December 2010, additional collateral or termination payments pursuant to bilateral agreements with certain counterparties of approximately CHF 0.7 billion and CHF 1.9 billion would have been required in the event of a one-notch and two-notch reduction, respectively, in UBS’s long-term credit ratings. In evaluating UBS’s liquidity requirements, UBS considers additional collateral or termination payments that would be required in the event of a reduction in UBS’s long-term credit ratings.

Derivatives used for structural hedging
The Group enters into derivative transactions for the purposes of hedging assets, liabilities, forecast transactions, cash flows and credit exposures. The accounting treatment of hedge transactions varies according to the nature of the instrument hedged and whether the hedge qualifies as such for accounting purposes.

Derivative transactions may qualify as hedges for accounting purposes. These are described under the corresponding headings in this note (fair value hedges, cash flow hedges and hedges of net investments in foreign operations). The Group’s accounting policies for derivatives designated and accounted for as hedging instruments are explained in “Note 1a) 15) Derivative instruments and hedge accounting”, where terms used in the following sections are explained.

The Group has also entered into interest rate swaps and other interest rate derivatives (e.g. futures) for day-to-day economic interest rate risk management purposes, but without applying hedge accounting. In addition, the Group has used equity futures, options and, to a lesser extent, swaps for economically hedging in a variety of equity trading strategies to offset underlying equity and equity volatility exposure. The Group has also entered into CDSS that provide economic hedges for credit risk exposures (refer to the credit derivatives section). Fair value changes of derivatives that are part of economic relationships, but do not qualify for hedge accounting treatment, are booked to Net trading income.

Fair value hedges
The Group’s fair value hedges principally consist of interest rate swaps that are used to protect against changes in the fair value of
Note 23 Derivative instruments and hedge accounting (continued)

fixed-rate instruments (e.g. long-term fixed-rate debt issues) due to movements in market interest rates. The fair values of outstanding interest rate derivatives designated as fair value hedges were assets of CHF 1,171 million and liabilities of CHF 46 million as of 31 December 2010 and assets of CHF 526 million and liabilities of CHF 71 million as of 31 December 2009.

</tbody>
</table>

The Group also hedges foreign exchange exposures arising from certain foreign currency denominated non-monetary financial investments available-for-sale using either the spot component of the forward foreign exchange contracts or debt issued denominated in the same currencies. As of 31 December 2010 the aggregate notional amount of hedging instruments designated as fair value hedges of foreign currency risk was CHF 393 million (CHF 386 million as of 31 December 2009). The ineffectiveness of these hedges was not material for the financial statements of the Group in the disclosed reporting periods.

Fair value hedges for portfolio interest rate risk

The Group also applies fair value hedge accounting to portfolio interest rate risk. The change in fair value of the hedged items is recorded separately from the hedged item and is included in Other assets on the balance sheet. The fair value of derivatives designated for this hedge method as of 31 December 2010 was a CHF 972 million liability; as of 31 December 2009 it was a CHF 956 million liability.

1 Hedge effectiveness is calculated on a cumulative basis.

Cash flow hedges of forecasted transactions

The Group is exposed to variability in future interest cash flows on non-trading assets and liabilities that bear interest at variable rates or are expected to be refunded or reinvested in the future. The amounts and timing of future cash flows, representing both principal and interest flows, are projected for each portfolio of financial assets and liabilities, based on contractual terms and other relevant factors including estimates of prepayments and defaults. The aggregate principal balances and interest cash flows across all portfolios over time form the basis for identifying the non-trading interest rate risk of the Group, which is hedged with interest rate swaps, the maximum maturity of which is 18 years.

The schedule of forecasted principal balances on which the expected interest cash flows arise as of 31 December 2010 is shown below.

Forecasted cash flows

</table>

To the extent the cash flow hedging relationship meets the qualifying criteria, the effective portion of the fair value changes of the designated derivative hedging instruments is recognized in Equity. These gains and losses are transferred from Equity to current period earnings in the same period in which the hedged cash flows affect net profit or loss. The ineffective portion of the fair value changes of the derivative hedging instruments is recognized immediately in the income statement. A CHF 22 million loss, a CHF 183 million loss and a CHF 108 million loss were recognized in 2010, 2009 and 2008, respectively, in Net trading income due to hedge ineffectiveness.
Note 23 Derivative instruments and hedge accounting (continued)

As of 31 December 2010, the fair values of outstanding derivatives designated as cash flow hedges of forecasted transactions were CHF 5,397 million assets and CHF 3,392 million liabilities and as of 31 December 2009 the amounts were CHF 5,180 million assets and CHF 2,736 million liabilities.

At the end of 2010 and 2009, gains of CHF 18 million and CHF 46 million associated with de-designated interest rate swaps were deferred in Equity. They will be removed from Equity when the previously hedged forecasted cash flows have an impact on net profit or loss, or when the forecasted cash flows are no longer expected to occur. Amounts reclassified from Equity to Net interest income of de-designated swaps were CHF 28 million net gain in 2010, CHF 40 million net gain in 2009 and CHF 49 million net gain in 2008.

In 2008, due to reductions in the volume of short-term financial instruments, some of the forecasted cash flows previously included in the hedge relationships were determined to no longer be expected to occur.

Hedges of net investments in foreign operations
The Group applies hedge accounting for certain consolidated net investments in USD-denominated operations. At 31 December 2010 the fair values of the financial liabilities (predominantly structured products issued by UBS) designated as hedging instruments in net investment hedges was CHF 1.9 billion as compared to CHF 2.5 billion at 31 December 2009. Gains or losses on the translation of these hedging instruments are transferred directly to Equity to offset any gains or losses on translation of the net investments in the subsidiaries, which are also recognized in Equity. No material ineffectiveness of hedges of net investments in foreign operations was recognized in the income statements during 2010 and 2009.

Contractual maturities of derivatives designated as hedging instruments in hedge accounting relationships
The contractual maturities of derivatives designated as hedging instruments in hedge accounting relationships are considered “essential” for the understanding of the timing of their cash flows.

¹ Interest rate swaps are generally gross settled. The table includes cash inflows and cash outflows of all interest rate swaps designated in hedge accounting relationships, which are either assets or liabilities of UBS as of 31 December 2010.

Risks of derivative instruments
Derivative instruments are transacted in many trading portfolios, which generally include several types of instruments, not just derivatives. The market risk of derivatives is predominantly managed and controlled as an integral part of the market risk of these portfolios. The Group’s approach to market risk is described in the audited “Market risk” section of this report.

Derivative instruments are transacted with many different counterparties, most of whom are also counterparties for other types of business. The credit risk of derivatives is managed and controlled in the context of the Group’s overall credit exposure to each counterparty. The Group’s approach to credit risk is described in the audited “Credit risk” section of this report. It should be noted that, although the Positive replacement values shown on the balance sheet can be an important component of the Group’s credit exposure, the Positive replacement values for a counterparty are rarely an adequate reflection of the Group’s credit exposure on its derivatives business with that counterparty. This is, for example, because on the one hand, replacement values can increase over time (“potential future exposure”), while on the other hand, exposure may be mitigated by entering into master netting agreements and bilateral collateral arrangements with counterparties. Both the exposure measures used by the Group internally to control credit risk and the capital requirements imposed by regulators reflect these additional factors.

The replacement values presented on UBS’s balance sheet and in the tables on the next page include netting in accordance with IFRS requirements (refer to Note 1a) 34)), which is more restrictive than netting in accordance with Swiss Federal Banking law. The main difference of Swiss Federal Banking law to IFRS is that Swiss Federal Banking law netting is generally based on close-out netting arrangements which are enforceable in case of insolvency. The Positive and Negative replacement values based on netting in accordance with Swiss Federal Banking law (factoring in cash collateral) are presented on the bottom of the tables on the next page.

The notional amounts presented in the tables indicate a nominal value of transactions outstanding at the reporting date but do not necessarily indicate the amounts of future cash flows involved or the current fair value of the instruments and, therefore, do not indicate the Group’s exposure to credit or market risks.

1 Bifurcated embedded derivatives are presented in the same balance sheet line as the host contract and are excluded from the table; these derivatives amount to a PRV of CHF 2.7 billion (related notional values of CHF 8.6 billion) and a NRV of CHF 1.3 billion (related notional values of CHF 10.4 billion).
2 PRV: Positive replacement value.
3 NRV: Negative replacement value.
4 Receivables resulting from derivatives are recognized on UBS’s balance sheet under Due from banks and Loans: CHF 0.7 billion (2009: CHF 1.6 billion). Payables resulting from these derivatives are recognized on UBS’s balance sheet under Due to banks and Due to customers: CHF 2.7 billion (2009: CHF 1.6 billion).
5 Changes in the fair value of purchased and sold financial assets between trade date and settlement date are recognized as replacement values.
6 Includes the impact of netting agreements (including cash collateral) in accordance with Swiss Federal Banking law, based on the IFRS scope of consolidation.
7 Notional values of exchange-traded agency transactions are not disclosed due to their significantly different risk profile.
8 Notional values as of 31 December 2009 for Interest rate, Foreign exchange, Equity/index and Commodity contracts have been corrected.
Note 23 Derivative instruments and hedge accounting (continued)

On a notional value basis, credit protection bought and sold held as of 31 December 2010 matures in a range of approximately 10% within one year, approximately 70% within 1 to 5 years and approximately 20% after 5 years. The maturity profile of OTC interest rate contracts held as of 31 December 2010, based on notional values, is as follows: approximately 45% mature within one year, 33% within 1 to 5 years and 22% over 5 years. Notional values of interest rate contracts cleared with The London Clearing House are presented under “other notional values” and are categorized into maturity buckets on the basis of contractual maturities of the cleared underlying derivative contracts.
Off-balance-sheet information

Note 24 Pledgeable off-balance-sheet securities

The Group obtains securities which are not recorded on the balance sheet with the right to sell or repledge them as shown in the table below.

Note 25 Operating lease commitments

As of 31 December 2010, UBS was obligated under a number of non-cancellable operating leases for premises and equipment used primarily for banking purposes. The significant premises leases usually include renewal options and escalation clauses in line with general office rental market conditions, as well as rent adjustments based on price indices. However, the lease agreements do not contain contingent rent payment clauses and purchase options, nor do they impose any restrictions on UBS’s ability to pay dividends, engage in debt financing transactions or enter into further lease agreements.

The minimum commitments for non-cancellable leases of premises and equipment are presented as follows:

<table>

Operating lease contracts include non-cancellable long-term leases of office buildings in most UBS locations. As of 31 December 2010, the minimum lease commitments for each of 12 office locations exceeded CHF 100 million.
Financial information
Notes to the consolidated financial statements

Additional information

Note 26 Capital increase and mandatory convertible notes

Conversion of the mandatory convertible notes issued in March 2008

On 5 March 2010, the mandatory convertible notes (MCNs) with a notional value of CHF 13 billion issued in March 2008 to the Government of Singapore Investment Corporation Pte. Ltd. and an investor from the Middle East were converted into UBS shares. The notes were converted at a price of CHF 47.68 per share. As a result, UBS issued 272,651,005 new shares with a nominal value of CHF 0.10 each from existing conditional capital. The MCNs were treated as equity instruments and recognized in Share premium. The conversion of the MCNs resulted in a reclassification of CHF 27 million from Share premium to Share capital.

Note 27 Fair value of financial instruments

a) Valuation principles

Fair value is the amount for which an asset could be exchanged, or a liability settled, between knowledgeable, willing parties in an arm’s length transaction. Financial instruments classified as held for trading or designated as at fair value through profit or loss, and financial assets classified as available for sale are recognized in the financial statements at fair value. All derivatives are measured at fair value.

Fair values are determined from quoted prices in active markets for identical financial assets or financial liabilities where these are available. Fair value of a financial asset or financial liability in an active market is the current bid or offer price times the number of units of the instrument held. Where a trading portfolio contains both financial assets and financial liabilities with offsetting market risks, fair value is determined by valuing the gross long and short positions at current mid market prices, with an adjustment at portfolio level to the net open long or short position to amend the valuation to bid or offer as appropriate.

Where the market for a financial instrument is not active, fair value is established using a valuation technique or pricing model. These valuation techniques and models involve a degree of estimation, the extent of which depends on the instrument’s complexity and the availability of market-based data. Valuation adjustments may be made to allow for additional factors including model risks, liquidity risk as reflected in the bid/offer and credit risk. Based on the established fair value and model governance policies and related controls and procedures applied, management believes that these valuation adjustments are necessary and appropriate to fairly state the values of financial instruments carried at fair value on the balance sheet.

When entering into a transaction where model inputs are not market observable, the financial instrument is initially recognized at the transaction price, which is generally the best indicator of fair value. This may differ from the value obtained from the valuation model (“Deferred day 1 profit or loss”). The timing of the recognition in profit and loss of this initial difference in fair value depends on the individual facts and circumstances of each transaction but is never later than when the market data become observable.

Pricing models and valuation techniques

The most frequently applied pricing models and valuation techniques include discounted cash flow models, relative value models and option pricing models. Discounted cash flows determine the value by estimating the expected future cash flows from assets or liabilities discounted to their present value. Relative value models determine the value based on the market prices of similar assets or liabilities. Option pricing models include such probability-based techniques as binomial and Monte Carlo pricing.

UBS uses widely recognized valuation models for determining fair values of financial instruments of lower complexity like interest rate and currency swaps. For more complex instruments, UBS uses internally developed models, which are usually based on valuation methods and techniques generally recognized as standard within the industry. Such valuation models are used primarily to value derivatives transacted in the over-the-counter (OTC) market, unlisted equity and debt securities (including those with embedded derivatives), and other fair valued debt instruments for which markets were illiquid in 2010. Market-observable assumptions and inputs are used where available, and derived from similar assets in similar and active markets, from recent transaction prices for comparable items or from other observable market data. Little, if any, weight is placed on transaction prices when calculating the fair value if there is no active market and the transactions are not orderly (i.e., distressed or forced). For positions where observable reference data are not available for
some or all parameters, UBS calibrates the non-market-observable inputs used in its valuation models based on a combination of historical experience and knowledge of current market conditions. Assumptions and inputs used in valuation techniques and models include benchmark interest rates, credit spreads and other premiums used in estimating discount rates, bond and equity prices, equity index prices, foreign exchange rates and levels of market volatility and correlation.

The output of a model is always an estimate or approximation of a value that cannot be determined with certainty, and valuation techniques employed may not fully reflect all factors relevant to the positions UBS holds. Valuations are therefore adjusted, where appropriate, to reflect close out costs, credit exposure, model uncertainty and trading restrictions.

**Interest rate curves**

UBS uses various interest rate curves for valuing its financial instruments. Financial liabilities designated at fair value are measured using UBS’s funds transfer price curve. Financial assets designated at fair value are valued consistent with the curve used for the particular business. Uncollateralized credit exposure is reserved through normal credit rating and reserving methods. For the valuation of uncollateralized derivative instruments, UBS generally employs a LIBOR flat curve. For the valuation of collateralized derivatives, UBS generally employs the overnight indexed swap (OIS) curve.

**Valuation curve changes**

For collateralized derivatives, the valuation approach was amended at the beginning of the year to use the OIS curve rather than the LIBOR flat curve. This followed a change in the market convention for pricing collateralized derivatives, to reflect that the interest rate typically paid on cash collateral references the OIS curve. The transitional effect of this change in estimate was recognized prospectively and resulted in an immaterial pre-tax gain.

**Counterparty credit risk in the valuation of OTC derivative instruments, derivatives embedded in funded assets designated at fair value and derivatives embedded in traded debt instruments**

In order to arrive at fair value, credit valuation adjustments (CVA) are necessary to reflect the credit risk of the counterparty inherent in over-the-counter (OTC) derivatives transactions, derivatives embedded in funded assets designated at fair value and derivatives embedded in traded debt instruments. This amount represents the estimated market value of protection required to hedge credit risk from counterparties in UBS’s OTC derivatives portfolio, derivatives embedded in funded assets designated at fair value and in traded debt instruments. CVA depends on expected future exposures, default probability and recovery rate. The calculation takes into account whether collateral or netting arrangements or break clauses are in place.

**UBS’s own credit risk in the valuations of derivative financial liabilities (Negative replacement values)**

The Group estimates debit valuation adjustments (DVA) to incorporate own credit in the valuation of derivatives, predominately, to align it with the CVA methodology as described above. The calculation takes into account negative expected exposure profiles for the derivatives portfolio, collateral, netting agreements, expected future mark-to-market movements, and UBS’s credit default spreads to determine the UBS counterparty exposure from the perspective of holders of UBS debt.

The debit valuation adjustments (DVA) so calculated represent the theoretical costs to counterparties of hedging their UBS credit risk exposure or the credit risk reserve that a counterparty could reasonably be expected to hold against their credit risk exposure to UBS, if they applied the same methodology as used to calculate UBS’s CVA.

As of 31 December 2010, the CVA and DVA for derivative financial instruments (replacement values) were as follows:

<table>
<thead>
<tr>
<th>CHF billion</th>
<th>CVA 1</th>

</tbody>
</table>

1 Amounts do not include reserves against defaulted counterparties. 2 CVA amounts do not include commutations.
Note 27  Fair value of financial instruments (continued)

UBS’s own credit risk in the valuations of financial liabilities designated at fair value

The Group’s own credit changes are reflected in valuations for those financial liabilities designated at fair value, where the Group’s own credit risk would be considered by market participants. Own credit effects are not reflected in the valuations of fully collateralized transactions and other instruments for which it is established market practice not to include them.

Own credit changes are calculated based on a funds transfer price (FTP) curve, which provides a single level of discounting for uncollateralized funded instruments within UBS. The FTP curve is used by UBS to value uncollateralized and partially collateralized funding transactions designated at fair value, and for relevant tenors is set by reference to the level at which newly issued UBS medium-term notes (MTNs) are priced. The FTP curve spread is considered to be representative of the credit risk which reflects the premium that market participants require to acquire UBS MTNs. The FTP curve was implemented at the end of the year and has replaced the asset and liability management revaluation curve (ALMRC). The impact on the income statement at implementation was not material.

The ALMRC was implemented at the beginning of the year and replaced the senior debt curve (SDC). The ALMRC incorporated additional market information from recently issued UBS debt instruments and aligned the pricing and risk management of different liability instruments under a single curve. UBS also improved the estimation methodologies for the construction of interest rate curves in non-USD currencies and for long-term maturities (i.e. tenors over ten years). The transitional impact of this prospectively applied change in estimate was a pre-tax net loss of CHF 133 million.

As of 31 December 2010 and 2009, respectively, the own credit results for Financial liabilities designated at fair value (predominantly issued structured products) were as follows:

<table>
<thead>
<tr>
<th>CHF million</th>
<th>As of or for the year ended</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>31.12.10</td>
</tr>
<tr>
<td>Total gain (loss) for the year ended</td>
<td>(548)</td>
</tr>
<tr>
<td>of which: credit spread related only</td>
<td>(470)</td>
</tr>
<tr>
<td>Life-to-date gain</td>
<td>237</td>
</tr>
</tbody>
</table>

Year-to-date amounts represent the change during the year and life-to-date amounts reflect the cumulative change since initial recognition. The change in own credit for the period can be analyzed in two components: (1) changes in fair value that are attributable to the change in UBS’s credit spreads during the period, and (2) the effect of volume changes, which is the change in fair values attributable to factors other than credit spreads, such as redemptions, effects from time decay, changes in interest rates and changes in the value of referenced instruments issued by third parties. The disclosed own credit amounts are also impacted by foreign currency movements.

A 1 basis point increase in the UBS credit spread over LIBOR is expected to result in an own credit gain of approximately USD 19.6 million (CHF 18.3 million).

Reflection of model uncertainty in fair value determinations

Uncertainties associated with the use of model-based valuations are predominantly addressed through the use of model reserves. These reserves reflect the amounts that UBS estimates are appropriate to deduct from the valuations produced directly by the models to reflect uncertainties in the relevant modeling assumptions and inputs used. In arriving at these estimates, UBS considers a range of market practice and how it believes other market participants would assess these uncertainties. Model reserves are periodically reassessed in light of information from market transactions, pricing utilities, and other relevant sources.

Valuation processes

UBS’s fair value and model governance structure includes numerous controls and procedural safeguards that are intended to maximize the quality of fair value measurements reported in the financial statements. New products need to be reviewed and approved by all stakeholders relevant to risk and financial control. Responsibility for the ongoing measurement of financial instruments at fair value resides with the business but is independently validated by risk and financial control functions. In carrying out their valuation responsibilities, the businesses are required to consider the availability and quality of available external market information and to provide justification and rationale for their fair value estimates. Independent price verification of financial instruments measured at fair value is undertaken by the product control function, which is independent from the risk taking businesses. The objective of the independent price verification process is to independently corroborate the busi-
ness’ estimates of fair value against available market information. By benchmarking the business’ fair value estimates with observable market prices or other independent sources, the degree of valuation uncertainty embedded in these measurements can be assessed and managed as required in the governance framework. A critical aspect of the independent price verification process is the evaluation of the appropriateness of modeling approaches and input assumptions which yield fair value estimates derived from valuation models. The output of modelling approaches is also compared to observed prices and market levels for the specific instrument being priced. This calibration analysis is performed to assess the ability of the model and its inputs (which are frequently based upon a combination of price levels of observable hedge instruments and difficult to observe parameters) to price a specific product in its own specific market. An independent model review group reviews UBS’s valuation models on a regular basis or if specific triggers occur and approves them for valuing specific products. As a result of the valuation controls employed, valuation adjustments may be made to the business’ estimate of fair value to either align with independent market information or financial accounting standards.

1. Bifurcated embedded derivatives, which are presented on the same balance sheet lines as host contracts, are excluded from this table. As of 31 December 2010, the fair value of the embedded derivative on Debt issued line were negative net CHF 1.7 billion classified as level 3 instruments and positive net CHF 0.3 billion classified as level 2 instruments respectively.
2. Financial assets held for trading do not include precious metal and commodities.
3. From December 2010 onwards, the amounts due under unit-linked investment contracts are reported in Other liabilities in this table. The comparative period has been adjusted.

Detailed breakdowns of UBS’s trading portfolio and financial investments available-for-sale by fair value hierarchy levels are shown in the Notes 11 and 13, respectively.
Note 27 Fair value of financial instruments (continued)

Transfers between level 1 and level 2 of the fair value hierarchy

Trading assets of approximately CHF 0.8 billion, of which CHF 0.6 billion are equity instruments, and trading liabilities of approximately CHF 0.2 billion, of which almost all are short sold equity instruments, were transferred from level 2 to level 1 due to increased trading activities and volumes, respectively.

Trading assets and liabilities with amounts of approximately CHF 1.5 billion and approximately CHF 0.6 billion were transferred from level 1 to level 2 respectively. The assets are largely related to equity instruments of CHF 0.8 billion and government bonds of CHF 0.2 billion. The trading liabilities transferred from level 1 to level 2 largely consist of short sold debt instruments of CHF 0.5 billion. These assets and liabilities transferred from level 1 to level 2 no longer met the average market activity UBS considers necessary when determining whether an instrument is traded in an active market.

Movements of level 3 instruments

The table below includes a roll-forward of the balance sheet amounts of the significant classes of financial instruments classified within level 3.

Where financial instruments moved into or out of level 3 during the periods, this change is reflected as if the financial instrument had been in the new level as of the beginning of the year in which the movement took place.
Material changes in level 3 instruments
As of 31 December 2010, financial instruments measured with valuation techniques using significant non-market observable inputs (level 3) mainly included the following:
- structured rates and credit trades, including bespoke collateralized debt obligations (CDOs) and collateralized loan obligations (CLOs)
- reference-linked notes
- financial instruments linked to the US sub-prime residential and US commercial real estate markets
- corporate bonds and corporate credit default swaps (CDS)
- equity linked notes issued by UBS
- traded loans

Financial assets held for trading
Trading portfolio assets transferred into and out of level 3 amounted to CHF 2.4 billion and CHF 2.8 billion, respectively. Transfers into level 3 of approximately CHF 1.1 billion were related to certain corporate bonds where no independent price verification was possible given the observability of the market. In addition, traded loans of CHF 0.6 billion were transferred into level 3 as trading activity diminished and independent sources became unavailable, sovereign bonds of CHF 0.4 billion were moved to level 3 as no independent price sources were available to verify fair values. Transfers out of level 3 were comprised of CHF 1.5 billion corporate bonds, of which CHF 1.3 billion were puttable bonds. Additionally, transfers out of level 3 included CLOs of CHF 0.7 billion and financial instruments linked to the Asian real estate market of CHF 0.2 billion as independent price sources became available and were used to verify fair values.

Level 3 trading assets purchased within the year amounted to CHF 3.7 billion. These purchases include traded loans of CHF 0.9 billion, corporate bonds of CHF 0.9 billion, financial instruments linked to the commercial real estate market of CHF 0.6 billion, equity instruments of CHF 0.4 billion, asset backed bonds of CHF 0.3 billion, and financial instruments linked to the European real estate market of CHF 0.2 billion.

Sales and settlements of level 3 trading assets amounted to CHF 3.7 billion, which included corporate bonds of CHF 1.1 billion, traded loans of CHF 0.8 billion, asset backed bonds of CHF 0.4 billion, financial instruments linked to the US real estate market of CHF 0.4 billion, financial instruments linked to the Asian real estate market of CHF 0.2 billion and those linked to commodities of approximately CHF 0.2 billion.

Derivative instruments
Derivative instruments transferred into level 3 include positive replacement values of CHF 1.6 billion and negative replacement values of CHF 1.8 billion. Transfers out of level 3 instruments included positive replacement values of CHF 4.3 billion and negative replacement values of CHF 2.9 billion.

Transfers into level 3 positive replacement values were comprised primarily of structured rates exotic trades of CHF 0.6 billion where skew and volatility could no longer be verified, structured credit bespoke CDO positions of CHF 0.5 billion, due to a sub-set of our portfolio being less comparable with available independent market data for correlation, and CDS positions of CHF 0.3 billion as credit curves and recovery rates could no longer be independently verified. Transfers into level 3 negative replacement values were comprised primarily of structured rates exotic trades of CHF 0.6 billion, structured credit bespoke CDO positions of CHF 0.3 billion, collateralized loan obligation CDS of CHF 0.3 billion, equity options of CHF 0.2 billion as volatility became unobservable for long-dated positions, and commercial mortgage-backed securities (CMBS) CDS of CHF 0.1 billion as reliability of independent market data for underlyings decreased.

Commencing 2010, UBS considers input data for a position observable when there is an equally offsetting transaction that nullifies substantially the price risk relating to that input of the instrument. As a consequence, positive replacement values of CHF 2.2 billion in total were transferred out of level 3. The following financial instruments were impacted: super senior subprime CDO positions of CHF 1.2 billion, subprime residential mortgage-backed securities (RMBS) CDS of CHF 0.6 billion, CDO positions of CHF 0.2 billion and CMBS CDS positions of CHF 0.1 billion. In addition, the following instruments were transferred out of level 3: subprime RMBS CDS positions of CHF 0.8 billion as reliability of independent market data on underlying positions increased, structured credit bespoke CDO positions of CHF 0.7 billion, due to a sub-set of our portfolio being more comparable with available independent market data for correlation, and corporate bonds CDS positions of CHF 0.3 billion where credit spreads and recovery rates could be independently verified. Transfers of negative replacement values out of level 3 include the effect of UBS’s new view that offsetting transactions may give rise to a level 2 classification. The effect amounted to CHF 2.2 billion in total. The following financial instruments were impacted: super senior subprime CDO positions of CHF 1.2 billion, subprime RMBS CDS of CHF 0.6 billion, CDO positions of CHF 0.2 billion and CMBS CDS positions of CHF 0.1 billion. In addition, corporate bond CDS of CHF 0.3 billion were transferred out of level 3.

Net issuances and purchases of level 3 positive replacement values were 1.6 billion, which included equity options of CHF 0.8 billion, structured credit bespoke CDO positions of CHF 0.4 billion and structured rates positions of CHF 0.1 billion. Net issuances and purchases of level 3 negative replacement values were CHF 1.4 billion, which included structured credit bespoke CDO positions of CHF 0.9 billion, equity options of CHF 0.2 billion and structured rates of CHF 0.1 billion.

Net settlements of level 3 positive replacement values were CHF 8.6 billion, which consisted primarily of structured credit positions of CHF 3.0 billion, subprime super senior CDO positions of CHF 1.5 billion, asset-backed CDS positions of CHF 0.7 billion, subprime
Financial information
Notes to the consolidated financial statements

Note 27  Fair value of financial instruments (continued)

RMBS CDS positions of CHF 0.6 billion, equity options of CHF 0.6 billion and US commercial real estate CMBS positions of approximately CHF 0.5 billion. Net sales and settlements of level 3 negative replacement values were CHF 6.8 billion, consist of structured credit bespoke CDO positions of CHF 2.7 billion, auction rate security forward purchase agreements of CHF 0.8 billion, corporate bond CDS positions of CHF 0.6 billion, structured rate trades of CHF 0.6 billion, subprime RMBS CDS positions of CHF 0.6 billion and subprime super senior CDO positions of CHF 0.5 billion.

Financial liabilities designated at fair value
Transfers of financial liabilities designated at fair value into level 3 were CHF 5.8 billion, consist primarily of secured funding notes of CHF 2.1 billion due to the lack of directly comparable transactional data, structured rate-linked notes of CHF 1.9 billion as the volatility of the embedded derivative could not be independently tested, equity linked notes of CHF 1.3 billion as the volatility of the embedded equity option could no longer be independently verified.

Transfers of financial liabilities designated at fair value out of level 3 were CHF 1.1 billion, which consisted of equity linked notes of CHF 0.5 billion and structured rate-linked notes of CHF 0.5 billion where the volatility of the embedded option was independently verified.

Net issuances of level 3 financial liabilities designated at fair value were CHF 3.3 billion, consisting primarily of equity linked notes of CHF 1.6 billion, structured rate-linked notes of CHF 1.2 billion and credit linked notes of CHF 0.4 billion. Net settlements of level 3 financial liabilities designated at fair value were CHF 4.7 billion, which consisted primarily of equity linked notes of CHF 2.4 billion, structured rate-linked notes of approximately CHF 1.4 billion and credit linked notes of CHF 0.4 billion.

Sensitivity information

Sensitivity of level 3 financial assets and liabilities
Included in the fair value estimates of financial instruments carried at fair value on the balance sheet are those estimated in full or in part using valuation techniques based on assumptions that are not supported by market observable prices, rates, or other inputs. In addition, there may be uncertainty about a valuation which results from the choice of valuation technique or model used, the assumptions embedded in those models, the extent to which inputs are not market observable, or as a consequence of other elements affecting the valuation technique or model.

To show the effect when changing the unobservable inputs to a reasonably possible alternative assumption, UBS performed a sensitivity analysis of its financial instruments classified as level 3, which are valued using a model-based technique, and for which significant model inputs are unobservable in the markets in which the underlying products are transacted. For securities and loans which are not ascribed a value from a model-based technique, fair values as of 31 December were adjusted by two to 20 percent, as deemed adequate for the applicable product in the professional judgment of control functions, which perform procedures to establish the reasonableness of the Bank’s valuation assertions at the balance sheet date. For all other level 3 financial instruments, the respective significant unobservable parameters were identified, and fair value estimates adjusted to alternative assumptions deemed reasonable in the markets in which the instruments may transact.

Cash instruments referred to in the below table relate to long and short inventory, if applicable, of the respective product type. For purposes of the below presentation, derivative instruments will include positive and negative replacement values, as well as issued notes with embedded equity or interest rate derivative features, which are presented on the UBS balance sheet as financial assets or liabilities designated at fair value. For all instruments, favorable changes are increases to asset values and decreases to liability values, as a consequence of applying the relevant sensitivity percentage. Unfavorable changes are decreases in asset values, and increases in liability values, as a consequence of applying the relevant sensitivity percentage for the respective financial instruments.

This section includes a description of main product categories, and related valuation techniques employed by the Bank.

Government and corporate bonds, bills and loans
Government bonds and bills are generally actively traded with quoted prices in liquid markets. Should market prices not be available, the securities are valued against yield curves implied from similar issuances.

Corporate bonds are priced at market levels, which are based on recent trades or broker and dealer quotes. In cases where no directly comparable price is available, the bonds are tested against yields derived from other securities by the same issuer or benchmarked against similar securities adjusting for seniority, maturity and liquidity. For illiquid securities credit modeling may be used, which considers the features of the security and discounts cashflows using observable or implied credit spreads and prevailing interest rates.

Loans held at fair value are priced at market levels reflecting recent transactions or quoted dealer prices. For illiquid loans where no market price is available, alternative valuation techniques are used which may include relative value benchmarking using pricing derived from debt instruments in comparable entities.

The corporate lending portfolio is valued using either directly observed market prices typically from consensus providers or using a credit default swap pricing model, which requires credit spreads, recovery and interest rate inputs.

Equity securities, hedge fund and investment fund units, convertible bonds, and options
The majority of equity securities are traded on public stock exchanges where quoted prices are readily and regularly available.

Hedge funds are measured at fair value based on their published Net Asset Values (NAVs). The Bank will consider the availability of NAVs from the funds or restrictions imposed upon the redemption of these funds when determining the final fair value.

Convertible bonds are mostly valued using observable pricing sources, which are generally available given frequency of trading in the market.

Investment fund units are predominantly exchange traded, with quoted prices in liquid markets. Should market prices not be available these instruments may be valued based on their Net Asset Value (NAV).

UBS has positions in both Exchange Traded Options (ETO) and Over-the-Counter (OTC) options. ETOs generally have observable prices, and the Bank considers market prices for their fair value assessment. OTC options are measured using either industry standard models or internally developed proprietary models.

Residential Mortgage-Backed Securities (RMBS), Commercial Mortgage-Backed Securities (CMBS), Asset-Backed Securities (ABS) and Collateralized Debt Obligations (CDO)
Values of RMBS, CMBS, ABS and CDOs are determined by traded prices and independently verified market data when available. In the absence of direct market data, values will be derived from traded and quoted prices on the securities with similar characteristics or indices through benchmarking and the triangulation approaches.

Securities with plain vanilla structure but limited observable market data are valued through industry standard valuation models, while those with complex structures are valued through proprietary models. Key inputs to such models include management’s quantitative and qualitative assessment on current and future economic conditions, of securities’ projected performance under such conditions, as well as liquidity in the market, among other factors. When applicable, reserves including, but not limited to, model risk and liquidity risk as reflected in the bid/offer may also be taken into account to determine the final value.

Credit derivatives related to RMBS, CMBS, ABS and CDO
Credit derivatives are in the form of credit default swaps, total return swaps and balance guaranteed swaps either referencing an index, single name securities or a basket of references. Single name contracts are primarily priced using reliable market data or traded prices on identical or similar exposures to determine their value. More illiquid and bespoke credit derivatives are valued through proprietary models and inputs to such models are derived via market data and calibration to similar transactions, reference indices, and securities.

Credit derivatives
Single name and index credit default swaps, and any derivation or combination which can be classified as complex structured credit products, are valued by using market available credit spreads and recovery rates from either consensus pricing services or other market participants. This data is fed into industry standard models in order to derive fair value.

Complex structured credit products are valued using proprietary models, which are calibrated to data derived from consensus pricing services. Inputs to these models include single name credit spreads, recovery rates, implied correlations, credit volatilities, cash/synthetic basis spreads and quanto basis spreads.

Rates swaps and forwards
OTC swap products include interest rate swaps, basis swaps, cross currency swaps, inflation swaps and interest rate forwards, often referred to as forward rate agreements (FRAs). All of these products are valued by estimating future interest cash-flows (both
Financial information
Notes to the consolidated financial statements

Note 27 Fair value of financial instruments (continued)

fixed and future index levels) and then discounting these flows using an interest rate that reflects the appropriate funding rate for that portion of the portfolio. Interest rates and future index levels used in the above calculations are generated from observing current market interest rates associated with typical OTC interest rate derivatives (swap rates, basis swap spreads, futures prices, FRA rates) and converting these into rates specific to the portfolio using market standard yield curve models.

Rates options
Interest rate caps and floors, swaptions, and other interest rate options are valued using market standard option models. These models use inputs that include (but are not limited to) interest rate yield curves, inflation curves, interest rates volatilities, FX rate volatilities, inflation volatilities, correlations (between different interest rates or between rates and FX or inflation). The models are calibrated so that they are able to recover market observed prices for standard option instruments trading within the market and the calibrated model is then used to revalue the portfolio.

➔ Refer to the “Risk and treasury management” section for more information on certain financial instruments with significant valuation uncertainty (CVA monolines, US and non-US reference-linked notes, option to acquire equity of the SNB StabFund)

d) Deferred day 1 profit or loss

The table reflects financial instruments for which fair value is determined using valuation models where not all significant inputs are market observable. Such financial instruments are initially recognized at their transaction price, although the values obtained from the relevant valuation model on day 1 may differ. Day 1 reserves are released and P&L is recorded in trading profit or loss as either the underlying parameters become observable or the transaction is closed out.

The table shows the aggregate difference yet to be recognized in profit or loss at the beginning and end of the period and a reconciliation of changes in the balance of this difference (movement of deferred day 1 profit or loss).

On 31 December 2010, deferred day 1 profit or loss of approximately CHF 0.3 billion (31 December 2009: approximately CHF 0.3 billion) pertains largely to structured rates and credit trades, including bespoke CDOs and multi-name credit default swaps, and of approximately CHF 0.3 billion (31 December 2009: approximately CHF 0.3 billion) to over-the-counter (OTC) equity options. Both instruments are presented as replacement values on UBS’s balance sheet.
The following table reflects the estimated fair values for UBS’s instruments accounted for at amortized cost. Refer to Note 29 for an overview of financial assets classified as “loans and receivables” and financial liabilities accounted for at amortized cost.

Notes:

1 Loan commitments include derivative loan commitments, loan commitments accounted for as financial liabilities designated at fair value and other loan commitments not recognized on balance sheet, unless a provision is required. 2 The fair value of financial guarantees is positive as the present value of the expected fees exceeds the present value of the expected outflows.

Loans include Wealth Management assets, mainly mortgage loans, where fair values exceed related carrying values by CHF 3.4 billion, and Investment Bank assets where fair values fall below related carrying values by CHF 1.2 billion.

The fair values included in the table above were calculated for disclosure purposes only. The valuation techniques and assumptions described below provide a measurement of fair value of UBS’s financial instruments accounted for at amortized cost. However, because other institutions may use different methods and assumptions for their fair value estimation, such fair value disclosures cannot necessarily be compared from one financial institution to another. UBS applies significant judgments and assumptions to arrive at these fair values, which are more holistic and less sophisticated than UBS’s established fair value and model governance policies and processes applied to financial instruments accounted for at fair value, whose fair values impact UBS’s balance sheet and net profit. The following principles were applied when determining fair value estimates for financial instruments accounted for at amortized cost:

- For financial instruments with remaining maturities greater than three months, the fair value was determined from quoted market prices, where available.
- Where quoted market prices were not available, the fair values were estimated by discounting contractual cash flows using current market interest rates or appropriate yield curves for instruments with similar credit risk and maturity. These estimates generally include adjustments for counterparty credit or UBS’s own credit.
  - For short-term financial instruments with remaining maturities of three months or less, the carrying amount, which is net of credit loss allowances, is generally considered a reasonable estimate of fair value. The following financial instruments accounted for at amortized cost have remaining maturities of three months or less: 94% of amounts due from banks; 100% of cash collateral on securities borrowed; 95% of reverse repurchase agreements; 100% of cash collateral receivables on derivatives; 42% of loans; 94% of amounts due to banks; 100% of cash collateral on securities lent; 93% of repurchase agreements; 100% of cash collateral payable on derivatives; 97% of amount due to customers; and 30% of debt issued.
  - The fair value of variable interest-bearing financial instruments accounted for at amortized cost is assumed to be approximated by their carrying amounts, which are net of credit loss al-
Note 27 Fair value of financial instruments (continued)

Financial assets are mainly pledged in securities borrowing and lending transactions, in repurchase and reverse repurchase transactions, under collateralized credit lines with central banks, against loans from mortgage institutions, in connection with derivative transactions, as security deposits for stock exchanges and clearinghouse memberships, or transferred for security purposes in connection with the issuance of covered bonds.

The fair value estimates for repurchase and reverse repurchase agreements with variable and fixed interest rates, for all maturities, include the valuation of the interest rate component of these instruments. Credit and debit valuation adjustments have not been included in the valuation due to the short term nature of these instruments.

The estimated fair values of off balance sheet financial instruments are based on market prices for similar facilities and guarantees. Where this information is not available, fair value is estimated using discounted cash flow analysis.

Note 28 Pledged assets and transferred financial assets which do not qualify for derecognition

Financial assets are mainly pledged in securities borrowing and lending transactions, in repurchase and reverse repurchase transactions, under collateralized credit lines with central banks, against loans from mortgage institutions, in connection with derivative transactions, as security deposits for stock exchanges and clearinghouse memberships, or transferred for security purposes in connection with the issuance of covered bonds.

The following table presents details of financial assets which have been sold or otherwise transferred, but which do not qualify for derecognition. Criteria for derecognition are discussed in Note 1a) 5).

</tbody>
</table>

The transactions are mostly conducted under standard agreements employed by financial market participants and are undertaken with counterparties subject to UBS’s normal credit risk control processes. The resulting credit risk exposures are controlled by daily monitoring and collateralization of the positions. The financial assets which continue to be recognized are typically transferred in exchange for cash or other financial assets. The associated liabilities can therefore be assumed to be approximately the carrying amount of the transferred financial assets except for certain positions pledged with central banks.

UBS retains substantially all risks and rewards of the transferred assets in each situation of continued recognition. These include credit risk, settlement risk, country risk and market risk.

Repurchase agreements and securities lending agreements are discussed in Notes 1a) 13) and 1a) 14). Other financial asset transfers include sales of financial assets while concurrently entering into a total rate of return swap with the same counterparty and sales of financial assets involving guarantees.

Transferred financial assets which are subject to partial continuing involvement were immaterial in 2010 and 2009.
Note 29 Measurement categories of financial assets and financial liabilities

a) Measurement categories of financial assets and financial liabilities

The following table provides information about the carrying amounts of individual classes of financial instruments within the measurement categories of financial assets and financial liabilities as defined in IAS 39. Only those assets and liabilities which are deemed to be financial instruments are included in the table below, which causes certain balances to differ from those presented on the balance sheet.

→ Refer to “Note 27 Fair value of financial instruments” for more information on how fair value of financial instruments is determined

1 CHF 127 billion of Loans, CHF 26 billion of Financial investments available-for-sale and CHF 7 billion of Financial assets designated at fair value are expected to be recovered or settled after twelve months. 
2 Embedded derivatives presented on the balance sheet line Debt issued.
Note 29 Measurement categories of financial assets and financial liabilities (continued)

b) Reclassification of financial assets

The reclassification of financial assets reflected UBS’s change in intent and ability to hold these financial assets for the foreseeable future rather than for trading in the near term. The foreseeable future is interpreted to mean a period of approximately 12 months following the date of reclassification. The financial assets were reclassified using their fair value on the date of the reclassification, which became their new cost basis at that date.

In fourth quarter 2008 and first quarter 2009, financial assets with fair values on their reclassification dates of CHF 26 billion and CHF 0.6 billion, respectively, were reclassified out of Trading portfolio assets to Loans.

The table below shows the carrying values and fair values of these financial assets.

<table>
<thead>
<tr>

<td>19.0</td>
</tr>
<tr>
<td>Pro-forma fair value gain/(loss)</td>
<td>0.2</td>
<td>(0.9)</td>
</tr>
</tbody>
</table>

In 2010, carrying values decreased by CHF 8.0 billion mainly due to sales of CHF 6.3 billion. Redemptions of CHF 0.7 billion and the appreciation of the Swiss franc against the US dollar of CHF 1.4 billion resulted in further decreases. The decrease was partially offset by the accretion of interest of approximately CHF 0.4 billion from the amortization of the discount between carrying values and the expected recoverable amounts.

Fair values of reclassified financial assets decreased as well by CHF 6.9 billion in 2010. The decreases included sales of CHF 6.3 billion, redemptions of CHF 0.7 billion, fair value changes of CHF 0.4 billion and the appreciation of the Swiss franc against the US dollar of CHF 1.4 billion, partially offset by fair value gains of CHF 1.8 billion.

The table below provides notional values, fair values, and carrying values by product category, as well as the ratio of carrying value to notional value.

\(^1\) Includes net gains on the disposal of reclassified assets.
The table below presents the Group’s maximum exposure to credit risk without taking account of any collateral held or other credit enhancements. The amounts included in the table represent the carrying amounts of financial instruments subject to credit risk, which were determined under the guidance of IFRS. Financial instruments have been netted only if and to the extent a) legally enforceable rights to offset exist, and b) UBS has the intention to settle the underlying transactions on a net basis. As such, the amounts disclosed in the table below should not necessarily be considered a “risk measure”.

Note 29 Measurement categories of financial assets and financial liabilities (continued)

c) Maximum exposure to credit risk and credit quality information

The table above does not include written credit protection, which is generally recognized on UBS’s balance sheet under Negative replacement values. It also excludes UBS’s potential obligations under the Swiss Deposit Insurance (2010: CHF 961 million, 2009: 1,030 million).

The maximum exposure to credit risk determined under IFRS guidance and disclosed in the table above is actively managed and subject to credit risk management, such as collateralization and hedging. Collateral held and credit risk mitigation is described in the section “Risk management and control”.

a) Defined benefit plans

UBS has established various pension plans inside and outside of Switzerland. The major plans are located in Switzerland, the UK, the US and Germany. Independent actuarial valuations are performed for the plans in these countries. The measurement date of these plans is 31 December for each year presented.

The overall investment policy and strategy for UBS’s defined benefit pension plans are guided by the objective of achieving an investment return which, together with the contributions paid, is sufficient to maintain reasonable control over the various funding risks of the plans. Depending on the country the pension fund trustees and/or UBS are responsible for the determination of the mix of asset types and target allocations. Actual asset allocation is determined by a variety of current economic and market conditions and in consideration of specific asset class risk.

The expected long-term rates of return on plan assets are based on long-term expected inflation, interest rates, risk premiums and targeted asset class allocations. These estimates take into consideration historical asset class returns and are determined together with the plans’ investment and actuarial advisors.

Swiss pension plan

The Swiss pension plan covers all UBS employees in Switzerland and exceeds the minimum benefit requirements under Swiss law. The Swiss plan allows employees a choice in the level of annual contributions paid by the employee. The pension plan provides benefits which are based on annual contributions as a percentage of salary and accrue at an interest rate that is defined annually by the Pension Foundation Board.

Contributions to the pension plan are paid by employees and the employer. The employee contributions are calculated as a percentage of covered salary and are deducted monthly. The percentages deducted from salary for the standard level of benefit coverage depend on age and vary between 1% and 9% of covered base salary and 3% and 8% of covered variable compensation. The employer pays a contribution that ranges between 100% and 375% of employees’ contributions for the standard level of benefit coverage. The benefits covered include retirement benefits; disability, death and survivor pensions; and employment termination benefits.

The employer contributions expected to be made in 2011 to the Swiss pension plan are CHF 530 million.

International pension plans

The international locations of UBS operate various pension plans in accordance with local regulations and practices. The locations with defined benefit plans of a significant nature are in the UK, the US and Germany. The UK and the US defined benefit plans are closed to new entrants who are covered by defined contribution plans. The amounts shown for international plans reflect the net funded positions of the significant international plans.

The pension plans provide benefits in the event of retirement, death or disability. The level of benefits provided depends on the defined rate of benefit accrual and level of compensation. The plans are funded entirely by UBS. The employer contributions expected to be made in 2011 to these pension plans are CHF 96 million. The funding policy for these plans is consistent with local government and tax requirements.

The assumptions used in international plans are based on local economic conditions.

Note 30 Pension and other post-employment benefit plans (continued)

b) Post-retirement medical and life insurance plans

In the US and the UK, UBS offers retiree medical benefits that contribute to the health care coverage of certain employees and beneficiaries after retirement. The UK plan is closed to new entrants. In addition to retiree medical benefits, UBS in the US also provides retiree life insurance benefits to certain employees. The benefit obligation in excess of the fair value of plan assets for these plans amounts to CHF 209 million as of 31 December 2010 (2009: CHF 186 million; 2008: CHF 159 million) and the total accrued post-retirement cost amounts to CHF 158 million as of 31 December 2010 (2009: CHF 163 million; 2008: CHF 164 million). The periodic post-retirement costs for the years ended 31 December 2010, 31 December 2009, and 31 December 2008 were CHF 22 million (net of a curtailment gain of CHF 0 million), CHF 9 million (net of a curtailment gain of CHF 8 million), and CHF 9 million (net of a curtailment gain of CHF 11 million), respectively.

The employer contributions expected to be made in 2011 to the post-retirement medical and life insurance plans are CHF 7 million.

The post-retirement benefit expense is determined by using the assumed average health care cost trend rate. The rate for 2011 is assumed to be 8% and is assumed to decrease gradually to 5% by 2018. On a country-by-country basis, the same discount rate is used for the calculation of the post-retirement benefit obligation from medical and life plans as for the defined benefit obligations arising from pension plans.

Assumed average health care cost trend rates have a significant effect on the amounts reported for health care plans. A one percentage point change in the assumed health care cost trend rates would change the US post-retirement benefit obligation and the service and interest cost components of the periodic post-retirement benefit costs as follows:

Note 30 Pension and other post-employment benefit plans (continued)

c) Defined contribution plans

UBS also sponsors a number of defined contribution plans in its international locations. The locations with defined contribution plans of a significant nature are in the UK and the US. Certain plans permit employees to make contributions and earn matching or other contributions from UBS. The employer contributions to these plans recognized as expense for the years ended 31 December 2010, 31 December 2009, and 31 December 2008 were CHF 246 million, CHF 246 million, and CHF 312 million, respectively.

d) Related party disclosure

UBS is the principal bank for the pension fund of UBS in Switzerland. In this function, UBS is engaged to execute most of the pension fund’s banking activities. These activities can include, but are not limited to, trading and securities lending and borrowing. All transactions have been executed at arm’s length conditions.

The international UBS pension funds do not have a similar banking relationship with UBS, but they may hold and trade UBS shares and/or securities.

In 2008, UBS sold certain bank-occupied properties to the Swiss pension fund. UBS and the Swiss pension fund entered simultaneously into lease-back arrangements for some of the properties with 25-year lease terms and two renewal options for ten years each. During 2009, UBS renegotiated one of the lease contracts which reduced UBS’s remaining lease commitment.

As of 31 December 2010, the minimum commitment towards the Swiss pension fund under the related leases is approximately CHF 21 million (2009: CHF 27 million). The total rent paid by UBS (including the lease-back arrangements) amounted to CHF 11 million in 2010, CHF 12 million in 2009, and CHF 7 million in 2008.

The following amounts have been received or paid by UBS:

UBS did not hold financial instruments issued by UBS pension plans as of 31 December 2010, 31 December 2009 and 31 December 2008, respectively.

Details to the fair value of plan assets of the defined pension plans are disclosed in Note 30a. Furthermore, UBS defined contribution pension funds hold 17,665,621 UBS shares with a market value of CHF 272 million as of 31 December 2010 (2009: 17,259,203 shares with a market value of CHF 278 million; 2008: 17,866,949 shares with a market value of CHF 272 million).
UBS has established several equity participation and other compensation plans to align the interests of executives, managers and staff with the interests of shareholders. The plans are offered to eligible employees in approximately 50 countries and are designed to meet the complex legal, tax and regulatory requirements of each country in which they are offered. UBS’s compensation plans are mandatory, discretionary or voluntary. The explanations below provide a general description of the terms of the most significant plans offered, however specific plan rules may vary by country. Refer to Note 1a) 24) for a description of the accounting policy related to equity participation and other compensation plans.

Mandatory share-based compensation plans

Equity Ownership Plan (EOP): Selected employees receive a portion of their annual performance-related compensation, above a certain threshold, in the form of an EOP award of UBS shares, notional UBS shares, UBS performance shares, or Alternative Investment Vehicles (AIVs), on a mandatory basis. The awards granted in UBS shares or notional UBS shares are settled by delivering UBS shares, except in countries where this is not permitted for legal reasons. Awards granted in the form of AIVs are settled in cash. The majority of EOP awards continue to be granted in UBS shares and notional UBS shares. EOP awards generally vest in increments over a three-year vesting period. The awards are generally forfeitable upon voluntary termination of employment with UBS. Compensation expense is recognized in the performance year if the employee meets the retirement eligibility requirements at the date of grant. Otherwise, compensation expense is recognized from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee. IPP awards cliff-vest after approximately five years and are subject to continued employment with UBS. Compensation expense is recognized on a tiered basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee. 

Performance Equity Plan (PEP): In 2010 GEB members received a portion of their annual incentive in the form of restricted performance shares. Each performance share is a contingent right to receive between zero and two UBS shares at vesting for each performance share granted, depending on the achievement of economic profit (EP) and Total Shareholder Return (TSR) targets. PEP awards cliff-vest after approximately three years. EP is a risk-adjusted profit measure that explicitly takes into account the cost of risk capital. TSR measures the total return to UBS shareholders (in form of share price appreciation and dividends) as compared to the constituents of a banking index. Vesting is subject to continued employment with UBS. Compensation expense is recognized on a tiered basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee.

Mandatory deferred cash compensation plans

Conditional Variable Compensation Plan (CVCP): In 2009 certain employees received as part of their annual incentive in the form of restricted performance shares. Each performance share is a contingent right to receive between zero and two UBS shares at vesting for each performance share granted, depending on the achievement of economic profit (EP) and Total Shareholder Return (TSR) targets. IPP awards cliff-vest after approximately three years. EP is a risk-adjusted profit measure that explicitly takes into account the cost of risk capital. TSR measures the total return to UBS shareholders (in form of share price appreciation and dividends) as compared to the constituents of a banking index. Vesting is subject to continued employment with UBS. Compensation expense is recognized on a tiered basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee. CVCP was a one-time plan granted in 2009 only.

WMUS Partner Plus Plan: Wealth Management Americas operates a mandatory deferred cash compensation plan for selected employees based in the US. Amounts are based on a predefined formula during the performance year. Participants are also allowed to voluntarily contribute additional amounts earned during the year into the plan up to a percentage of UBS’s contributions. The amounts awarded earn an above-market rate of interest during

---

1 Selected employees are granted a contingent right to receive a cash payment, the value of which is based on the value of underlying investment funds or cash, rather than the value of UBS’s equity.
Note 31 Equity participation and other compensation plans (continued)

the initial four-year period and a market rate of interest thereafter. The awards vest in 20% increments six to ten years following grant date. Interest earned on UBS contributions is forfeitable under certain circumstances. Compensation expense is recognized on a straight-line basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee.

WMUS advances related to recruited financial advisors: The Company has entered into various agreements with certain of its financial advisors whereby these financial advisors receive a compensatory advance in the form of an employee loan. These employee loans have been capitalized and are being expensed on a straight-line basis over the terms specified in each agreement.

Cash Balance Plan (CBP): In 2010 Group Executive Board (GEB) members received as part of their mandatory deferral a cash award that allows for a maximum payout of 60% of a GEB member’s variable cash incentive at the beginning of the following year, subject to a total cash awards limitation. A minimum of 40% of the GEB member’s cash incentive awarded is deferred and paid out during the two following years subject to “malus”, i.e. the entire cash incentive is paid out over a three-year period. The “malus” allows for unvested awards to be reduced (including to nil) in the event of termination for cause, financial losses in subsequent years, material restatement of the financial statements, harm to UBS’s reputation, breaches of legal or regulatory requirements or of risk/compliance policies, and a number of other events. Compensation expense is recognized in the performance year, which is generally the period prior to the grant date.

Discretionary share-based compensation plans

Key Employee Stock Appreciation Rights Plan (KESAP) and Key Employee Stock Option Plan (KESOP): Until 2009 key and high potential employees were granted discretionary share-settled Stock Appreciation Rights (SARs) or UBS options with a strike price not less than the fair market value of a UBS share on the date the SAR or option is granted. A SAR gives employees the right to receive such number of UBS shares equal to the value of any appreciation in the market price of a UBS share between the grant date and the exercise date. One option gives the right to acquire one registered UBS share at the option's strike price. Compensation expense for the Equity Plus plan is recognized on a tiered basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee. No KESAP or KESOP awards were granted in 2010.

Senior Executive Stock Appreciation Rights Plan (SESAP) and Senior Executive Stock Option Plan (SESOP): Until 2008 senior executives were granted discretionary SARs or UBS options with a strike price set at 110% of the fair market value of a UBS share on the date the SAR or option is granted. A SAR gives an employee the right to receive such number of UBS shares equal to the value of any appreciation over 110% of the market price of a UBS share between grant date and the exercise date. One option gives the right to acquire one registered UBS share at the option's strike price. SESAP and SESOP awards are settled by delivering UBS shares. These awards vest in full following a three-year vesting period and generally expire ten years from the grant date. These awards are forfeitable if certain conditions are not met. Compensation expense for all SESAP and SESOP awards is recognized during the performance year, which is generally the period prior to the grant date. During 2009, UBS granted SESOP awards only to certain employees for which it had a contractual commitment. No SESOP awards were granted in 2010.

Voluntary share-based compensation plans

Equity Plus Plan (Equity Plus): This is a voluntary plan that gives eligible employees the opportunity to purchase UBS shares at fair market value and generally receive at no additional cost one free notional UBS share for every three shares purchased, up to a maximum annual limit. Share purchases can be made annually from bonus compensation and/or quarterly based on regular deductions from salary. Shares purchased under Equity Plus are restricted from sale for a maximum of three years from the time of purchase. Prior to 2010, each participant generally received at no additional cost two UBS options for each share purchased under this plan. The options had a strike price equal to the fair market value of a UBS share on the grant date, had a two-year vesting period and generally expired ten years from the grant date. The options are forfeitable in certain circumstances and are settled by delivering UBS shares, except in countries where this is not permitted for legal reasons. Compensation expense for the Equity Plus plans is recognized on a tiered basis from the grant date to the earliest of the vesting date or the retirement eligibility date of the employee.

UBS satisfies share delivery obligations under its share, option and SAR plans either by purchasing UBS shares in the market or through the issuance of new shares. As of 31 December 2010, UBS was holding approximately 26 million shares in treasury and approximately 150 million unissued shares in conditional share capital, which are available and can be used to satisfy awards of notional shares and performance shares and for future employee option and SAR exercises. The shares available cover all vested (i.e. exercisable) employee options, SARs and notional shares.

¹ The first grants made under KESAP were in 2009.
Note 31 Equity participation and other compensation plans (continued)

b) Effect on income statement

Effect on income statement for the financial year and future periods
The following table summarizes the compensation expenses recognized for the years ended 31 December 2010 and the compensation expenses, which will be recognized as an expense in the income statements 2011 and later. The deferred compensation expenses in the table also include non-vested awards granted in February and March 2011, which relate to the compensation core cycle 2010.

¹ Total share-based personnel expenses recognized for the year ended 31 December 2009 of CHF 913 million is comprised of UBS share plans of CHF 559 million, UBS share option plans of CHF 56 million, Equity Ownership Plan – AIVs of CHF 55 million, related social security costs of CHF 16 million and other variable compensation of CHF 227 million.
² Includes replacement awards of CHF 41 million, forfeiture credits of CHF (81) million, guaranteed bonuses of CHF 56 million, severance payments of CHF 433 million and UBS’s Equity Plus Plan of CHF 152 million.
³ Financial advisor compensation consists of grid-based compensation based directly on compensable revenues generated by financial advisors and supplemental compensation calculated based on financial advisor productivity, firm tenure and other variables. It also includes costs related to compensation commitments and advances granted to financial advisors at the time of recruitment, which are subject to vesting requirements.

Additional disclosures on mandatory, discretionary and voluntary share-based compensation plans (including AIVs granted under EOP)

The total share-based personnel expenses recognized for the years ended 31 December 2010, 2009 and 2008 were CHF 1,843 million, CHF 913 million and negative CHF 94 million, respectively. These expenses include social security costs, and current performance year awards for core cycle awards granted in the period following the performance year where the employee meets the retirement eligibility requirements at the date of grant.

The total compensation expenses for non-vested awards granted up to 31 December 2010 to be recognized in future periods is CHF 1,382 million and will be recognized in Personnel expenses over a weighted average period of 2.5 years. Deferred compensation amounts included in the table above differ from this amount as they include non-vested awards granted in February and March 2011 related to the compensation core cycle 2010.

Actual payments to participants of cash-settled share-based plans, including amounts granted as AIVs issued under EOP, for the years ended 31 December 2010, 2009 and 2008 were CHF 79 million, CHF 83 million and CHF 80 million, respectively. The total carrying amount of the liability related to unvested cash-settled share-based compensation plans was CHF 54 million at 31 December 2010.

1 As a result of the rights offering in June 2008, UBS adjusted the number of options and exercise price for vested and unvested employee options, which were unexercised at the date of the rights offering. This was done to prevent any dilution impact to holders of these options. No additional compensation expense was recognized. This resulted in an increase to the number of options awarded in 2008 of 3,881,320 and an increase to the prior year outstanding balance of 2,400,143.

2 Some of the options in this table have exercise prices denominated in USD, which have been converted into CHF at the year-end spot exchange rate for the purposes of this table.

The following table provides additional information about option exercises, grants and intrinsic values:

Note 31 Equity participation and other compensation plans (continued)

d) Valuation

**UBS share awards**
UBS measures compensation expense based on the average market price of the UBS share on the grant date as quoted on the SIX Swiss Exchange less a discount for post-vesting sale and hedge restriction, in accordance with IFRS 2 Share-based Payment: Vesting Conditions and Cancellations. The fair value of the share awards subject to post-vesting sale and hedge restrictions is discounted based upon the duration of the post-vesting restriction and is referenced to the cost of purchasing an at-the-money plain vanilla European put option for the term of the transfer restriction. The weighted average discount for share and performance share awards granted during 2010 is approximately 20.6% of the market price of the UBS share. The grant date fair value of notional UBS shares without dividend entitlements also includes a deduction for the present value of future expected dividends to be paid between grant date and distribution.

**UBS options and SARs awards**
Since 2010, the fair values of options and SARs have been determined using a standard closed-formula option valuation model. The expected term of each instrument is calculated based on historical employee exercise behavior patterns, taking into account the share price, strike price, vesting period and the contractual life of the instrument. Similar to 2009 and 2008, the term structure of volatility is derived from the implied volatilities of traded UBS options in combination with the observed long-term historical share price volatility. Expected future dividends are derived from traded UBS options or from the historical dividend pattern. No options or SARs were granted in 2010.

In 2009 and 2008, the fair value of options and SARs was determined by means of a Monte Carlo simulation. The simulation technique used a mix of implied and historical volatility and specific employee exercise behaviour patterns based on statistical data, taking into account the specific terms and conditions under which the instrument was granted, such as the vesting period, forced exercises during the lifetime, and gain- and time-dependent exercise behaviour. The expected term of each instrument was calculated as the probability-weighted average period of the time between grant and exercise. The term structure of volatility was derived from the implied volatilities of traded UBS options in combination with the observed long-term historical share price volatility. Expected future dividends were derived from traded UBS options or from the historical dividend pattern. The fair values of options and SARs granted during 2009 and 2008 were determined using the following assumptions:

### UBS share awards

### UBS performance share awards (IPP, PEP)
For performance share awards granted in 2010, UBS obtained independent third party valuations based on the market conditions at the date of grant. The valuation methodology applied was a Monte Carlo simulation. The approach to determining input parameters and valuing the post-vesting transfer restriction is in line with that used for options. The fair value of IPP and PEP units granted during 2010 was determined using the following assumptions:

<table>

Note 32 Related parties

The Group defines related parties as associated companies (entities which are significantly influenced by UBS), post-employment benefit plans for the benefit of UBS employees, key management personnel, close family members of key management personnel and entities which are, directly or indirectly, controlled or jointly controlled by key management personnel or their close family members. Key management personnel is defined as members of the Board of Directors (BoD) and Group Executive Board (GEB). This definition is based on the revised requirements of IAS 24 Related Party Disclosures issued in November 2009.

a) Remuneration of key management personnel

The non-independent members of the BoD have top management employment contracts and receive pension benefits upon retirement. Total remuneration of the non-independent members of the BoD and GEB including those who stepped down during 2010 is as follows:

<table>
<thead>
<tr>
<th>Remuneration of key management personnel</th>
<th>31.12.10</th>
<th>31.12.09</th>
<th>31.12.08</th>
</tr>
</thead>
<tbody>

<td>48⁴</td>
<td>29</td>
<td>0</td>
</tr>
<tr>
<td>Total</td>
<td>96</td>
<td>112</td>
<td>15</td>
</tr>
</tbody>
</table>

¹ During 2010, Francesco Morra stepped down from the GEB. ² Expense for shares and options granted is measured at grant date and allocated over the vesting period, generally 3 years for options and 5 years for shares. ³ In 2010, incentive awards include immediate and deferred cash. ⁴ In 2010, equity compensation benefits include PEP, SEEOP and blocked shares.

b) Equity holdings

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td>4,850,196</td>
<td>4,180,154</td>
<td>5,869,952</td>
<td></td>
</tr>
</tbody>
</table>

¹ Refer to “Note 31 Equity participation and other compensation plans” in this section for more information.

The independent members of the BoD do not have employment or service contracts with UBS, and thus are not entitled to benefits upon termination of their service on the BoD. Payments to these individuals for their services as external board members amounted to CHF 6.7 million in 2010, CHF 6.4 million in 2009 and CHF 6.4 million in 2008.

Of the share totals above, as of 31 December 2010, 31 December 2009 and 31 December 2008, 5,597 shares, 0 shares and 15,878 shares respectively were held by close family members of key management personnel and 0 shares, 0 shares and 103,841 shares respectively were held by entities which are directly or indirectly controlled or jointly controlled by key management personnel or their close family members. Refer to “Note 31 Equity personnel and other compensation plans” in this section for more information. No member of the BoD or GEB is the beneficial owner of more than 1% of the Group’s shares at 31 December 2010.
Non-independent members of the BoD and GEB members have been granted loans, fixed advances and mortgages on the same terms and conditions that are available to other employees, based on terms and conditions granted to third parties adjusted for reduced credit risk. Independent BoD members are granted loans and mortgages at general market conditions. Movements in the loan, advances and mortgage balances are as follows:

### Loans, advances and mortgages to key management personnel

</tbody>
</table>

Note 34 provides a list of significant associates.
### Note 32 Related parties (continued)

#### e) Other related party transactions

During 2010 and 2008, UBS entered into transactions at arm’s length with entities which are directly or indirectly controlled or jointly controlled by UBS’s key management personnel or their close family members. In 2010, UBS provided services for H21 Macro Fund Ltd (Cayman Islands). In 2009, UBS did not enter into any such transactions and in 2008, these entities included: Aebi + Co. AG (Switzerland), Kedge Capital Selected Funds Ltd. (Jersey), Löwenfeld AG (Switzerland), Martown Trading Ltd. (Isle of Man), Omega Fund I Ltd (Jersey), Omega Fund IV Ltd (Jersey), Stadler Rail Group (Switzerland), Team Alinghi (Switzerland) and Team Alinghi (Spain).

Movements in loans to other related parties are as follows:

<table>
<thead>
<tr>
<th>CHF million</th>
<th>31.12.10</th>
<th>31.12.09</th>
<th>31.12.08</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

As part of its sponsorship of Team Alinghi, UBS paid CHF 828,090 (EUR 538,000) in basic sponsoring fees for 2008. Team Alinghi’s controlling shareholder is UBS former Board member Ernesto Bertarelli.

#### f) Additional information

UBS also engages in trading and risk management activities (e.g. swaps, options and forwards) with various related parties mentioned in previous sections. These transactions may give rise to credit risk either for UBS or for a related party towards UBS. As part of its normal course of business, UBS is also a market maker in equity and debt instruments and at times may hold positions in instruments of related parties.
Note 33 Events after the reporting period

Subsequent to the publication of the unaudited fourth quarter 2010 financial report on 8 February 2011, management decided to adjust the annual financial statements 2010. The net impact of these adjustments on net profit attributable to UBS shareholders was a gain of CHF 373 million, which increased basic and diluted earnings per share by CHF 0.10.

The principal change relates to an adjustment of the investment carrying amount of a subsidiary held by UBS AG for purposes of the Parent Bank’s 2010 statutory financial statements prepared pursuant to Swiss Federal banking law. The adjustment, a reduction in the subsidiary carrying amount of CHF 1,609 million, decreases the level of Swiss taxable profit reported for the year 2010. The adjustment resulted in an increase in the deferred tax benefit for the year reflected in the Income statement of CHF 298 million.

In addition, other adjustments made to the Income statement that forms part of the audited annual financial statements 2010 include a refinement in the 2010 variable compensation accrual at year-end of CHF 74 million (credit to the Income statement) across the business divisions, a litigation matter resulting in a CHF 40 million charge affecting Wealth Management, a credit valuation adjustment gain of CHF 19 million affecting the Investment Bank, and a tax benefit of CHF 22 million to the Income statement in relation to these other items.

On 3 March 2011, the Board of Directors reviewed the financial statements and authorized them for issue. These financial statements will be submitted to the Annual General Meeting of shareholders on 28 April 2011 for approval.

Note 34 Significant subsidiaries and associates

The legal entity group structure of UBS is designed to support the Group’s businesses within an efficient legal, tax, regulatory and funding framework. Neither the business divisions of UBS (namely Investment Bank, Wealth Management Americas, Wealth Management & Swiss Bank and Global Asset Management) nor the Corporate Center are replicated in their own individual legal entities, but rather they generally operate out of UBS AG (Parent Bank) through its Swiss and foreign branches.

The parent bank structure allows UBS to capitalize on the advantages offered by the use of one legal platform by all the business divisions. It provides for the most cost efficient and flexible structure and facilitates efficient allocation and use of capital, comprehensive risk management and control and straightforward funding processes.

Where, usually due to local legal, tax or regulatory rules or due to additional legal entities joining the UBS Group via acquisition, it is either not possible or not efficient to operate out of the parent bank, then local subsidiary companies host the businesses. The significant operating subsidiary companies in the Group are listed below:

1 WMA: Wealth Management Americas; WM&S&B: Wealth Management & Swiss Bank; Global AM: Global Asset Management; IB: Investment Bank; CC: Corporate Center. 2 Share capital and share premium.
Net new money in a period is the net amount of invested assets that are entrusted to UBS by new and existing clients less those withdrawn by existing clients and clients who terminated their relationship with UBS.

Net new money is calculated using the direct method, by which inflows and outflows to/from invested assets are determined at the client level based on transactions. Interest and dividend income from invested assets is not counted as net new money inflow. Market and currency movements as well as fees, commissions and interest on loans charged are excluded from net new money, as are the effects resulting from any acquisition or divestment of a UBS subsidiary or business. Reclassifications between invested assets and custody-only assets as a result of a change in the service level delivered are treated as net new money flows.

The Investment Bank does not track invested assets and net new money. However, when a client is transferred from the Investment Bank to another business division, this produces net new money even though client assets were already with UBS.

Net new money for 2010 includes inflows of CHF 3.7 billion resulting from transfers of Investment Bank clients to Wealth Management, as part of the Global Family Office initiative.

Note 36 Business combinations

**Business combinations completed in 2010**

In 2010 no significant business combinations were completed.

**Business combinations completed in 2009**

**Acquisition of the commodity index business of AIG Financial Products Corp.**

In May 2009, UBS completed the acquisition of the commodity index business of AIG Financial Products Corp., including AIG’s rights to the DJ-AIG Commodity index. This commodity index business comprises a product platform of commodity index swaps and funded notes based on the benchmark Dow Jones-AIG Commodity Index (DJ-AIGCI). The cost of the business combination, including directly attributable transaction costs, amounted to CHF 74 million (USD 65 million) of which CHF 17 million (USD 15 million) was paid in cash upon closing. The remaining payments, based upon future earnings of the purchased business, were made in 2010. The cost of the business combination was allocated to Intangible assets of CHF 40 million (USD 35 million) and Goodwill of CHF 34 million (USD 30 million). The business of AIG was integrated into UBS’s Investment Bank.

**Pro-forma information (unaudited)**

The following pro-forma information shows UBS’s total operating income, net profit attributable to UBS shareholders and basic earnings per share as if all of the acquisitions completed in 2009 had been made as of 1 January 2008. Adjustments have been made to reflect additional amortization and depreciation of assets and liabilities, which have been assigned fair values different from their carryover basis in purchase accounting.

Note 37 Discontinued operations

2010

In 2010, private equity investments sold in prior years contributed a subsequent gain of CHF 2 million to UBS’s net profit from discontinued operations.

2009

In 2009, private equity investments sold in prior years contributed a subsequent loss of CHF 7 million to UBS’s net profit from discontinued operations.

2008

Industrial holdings

In 2008, private equity investments, including the sale of one equity investment and subsequent gains on private equity investments sold in prior years, contributed CHF 155 million to UBS’s net profit from discontinued operations, which included after-tax gains on sale of CHF 120 million and an after-tax operating profit of CHF 34 million. The cash consideration received for the equity investment sold in 2008 amounted to CHF 141 million. These private equity investments were held within the Industrial Holdings segment, integrated within the Corporate Center since the beginning of 2008, and were sold in line with UBS’s strategy to exit the private equity business.

¹ Gain resulting from a purchase price adjustment related to the sale of Private Banks & GAM in 2005. ² Included in Treasury activities and other corporate items in Note 2a.

Note 38 Reorganizations and disposals

Sale of investment in New York office building

In January 2010, UBS closed the sale of its investments in several associated entities owning office space in New York. A significant portion of the office space is leased by UBS Group until 2018. The sales price was CHF 187 million with a resulting gain on sale of CHF 180 million.

Restructuring 2010

During 2010, UBS incurred net restructuring charges of CHF 113 million. Wealth Management Americas recognized CHF 90 million for real-estate related costs in General and administrative expenses and CHF 37 million for impairment in Depreciation of property and equipment. In addition, the business division incurred personnel related restructuring charges of CHF 35 million. The Investment Bank released personnel related restructuring provisions of CHF 25 million.

Note 40 Swiss banking law requirements

The consolidated Financial Statements of UBS are prepared in accordance with International Financial Reporting Standards (IFRS). The Guidelines of the Swiss Financial Market Supervisory Authority (FINMA) require banks which present their financial statements under IFRS to provide a narrative explanation of the main differences between IFRS and Swiss GAAP (FINMA circular 08/2) and the Banking Ordinance. Included in this note are the significant differences in regard to recognition and measurement between IFRS and the provisions of the Banking Ordinance and the Guidelines of the FINMA governing financial statement reporting pursuant to Article 23 through Article 27 of the Banking Ordinance. The differences outlined in points two through nine also apply to the Parent Bank statutory accounts.

1. Consolidation

Under IFRS, all entities which are controlled by the Group are consolidated.

Under Swiss law, only entities that are active in the field of banking and finance and real estate entities are subject to consolidation. Entities which are held temporarily are generally recorded as financial investments.

2. Financial investments available-for-sale

Under IFRS, Financial investments available-for-sale are carried at fair value. Changes in fair value are recorded directly in equity until an investment is sold, collected or otherwise disposed of, or until an investment is determined to be impaired. At the time an available-for-sale investment is determined to be impaired, the cumulative unrealized loss previously recognized in equity is included in net profit or loss for the period. On disposal of a financial investment available-for-sale, the cumulative unrecognized gain or loss previously recognized in equity is recognized in the income statement.

Under Swiss law, financial investments are carried either at the lower of cost or market or at amortized cost less impairment with changes in measurement recorded in the income statement. Re-ductions to market value below cost and reversals of such reductions up to original cost as well as gains and losses on disposal are included in Other income. Permanent equity investments are classified on the balance sheet as Investments in associated companies and are measured at cost less impairment with impairment losses recorded in the income statement.

3. Cash flow hedges

The Group uses derivative instruments to hedge the exposure from varying cash flows. Under IFRS, when hedge accounting is applied the fair value gain or loss on the effective portion of the derivative designated as a cash flow hedge is recognized in equity. When the hedged cash flows materialize, the accumulated unrecognized gain or loss is realized and released to income.

Under Swiss law, the effective portion of the fair value change of the derivative instrument used to hedge cash flow exposures is deferred on the balance sheet as other assets or other liabilities. The deferred amounts are released to income when the hedged cash flows materialize.

4. Investment property

Under IFRS, investment property is carried at fair value, with changes in fair value recognized in the income statement.

Under Swiss law, investment property is carried at amortized cost less any accumulated depreciation less impairment losses unless the investment property is classified as held for sale. Investment property classified as held for sale is carried at the lower of cost or market.

5. Fair value option

Under IFRS, the Group applies the fair value option to certain financial assets and financial liabilities, mainly to hybrid debt instruments. Hybrid instruments are accounted for at fair value with changes in fair value reflected in Net trading income. Furthermore, UBS designated certain loans, loan commitments and fund
Note 40  Swiss banking law requirements (continued)

investments as financial assets designated at fair value through profit and loss.

Under Swiss accounting rules, the fair value option is not available except for issued structured products that consist of a debt host contract and a bifurcable embedded derivative(s). However, changes in fair value attributable to changes in own credit are not recognized in the income statement.

6. Goodwill and intangible assets

Under IFRS, goodwill acquired in a business combination is not amortized but tested annually for impairment. Intangible assets acquired in a business combination with an indefinite useful life are also not amortized but tested annually for impairment.

Under Swiss law, goodwill and intangible assets with indefinite useful lives are amortized over a period not exceeding five years, unless a longer useful life, which may not exceed twenty years, can be justified.

7. Discontinued operations

Under certain conditions, IFRS requires that non-current assets or disposal groups be classified as held for sale. Disposal groups that meet the criteria of discontinued operations are presented in the income statement in a single line as net income from discontinued operations.

Under Swiss law, no such reclassification takes place.

8. Extraordinary income and expense

Certain items of income and expense are classified as extraordinary items under Swiss law, whereas in the Group Income Statement the amounts are classified as operating income or expense or are included in net profit from discontinued operations, if required.

9. Netting of replacement values

Under IFRS, replacement values are reported on a gross basis, unless certain restrictive requirements are met. Under Swiss law, replacement values and the related cash collateral are reported on a net basis, provided the master netting and the related collateral agreements are legally enforceable.
Financial information
Notes to the consolidated financial statements

Note 41 Supplemental guarantor information required under SEC rules

Guarantee of PaineWebber securities

Following the acquisition of Paine Webber Group Inc., UBS made a full and unconditional guarantee of the senior and subordinated notes and trust preferred securities ("Debt Securities") of PaineWebber. Prior to the acquisition, PaineWebber was a SEC registrant. Upon the acquisition, PaineWebber was merged into UBS Americas Inc., a wholly-owned subsidiary of UBS.

Under the guarantee, if UBS Americas Inc. fails to make any timely payment under the Debt Securities agreements, the holders of the Debt Securities or the Debt Securities trustee may demand payment from UBS without first proceeding against UBS Americas Inc. UBS's obligations under the subordinated note guarantee are subordinated to the prior payment in full of the deposit liabilities of UBS and all other liabilities of UBS.

The information presented in this note is prepared in accordance with IFRS and should be read in conjunction with the Consolidated Financial Statements of UBS of which this information is a part.

¹ UBS AG Parent Bank prepares its financial statements in accordance with Swiss banking law requirements. For the purpose of this disclosure, the accounts have been adjusted to IFRS.
² Money market papers are included in the balance sheet under Due from banks and Cash collateral receivables on derivative instruments.
³ Includes positions recognized in the balance sheet under Due from banks and Cash collateral receivables available-for-sale. CHF 19,912 million were pledged as of 31 December 2008.
**Note 41 Supplemental guarantor information required under SEC rules (continued)**

### Guarantee of other securities

UBS AG, acting through wholly-owned US-domiciled finance subsidiaries, issued the following trust preferred securities:

<table>
<thead>
<tr>
<th>Issuing entity</th>
<th>Type of security</th>
<th>Date issued</th>
<th>Interest (%)</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>UBS Preferred Funding Trust II</td>
<td>Trust preferred securities</td>

</tr>
<tr>
<td>UBS Preferred Funding Trust V</td>
<td>Trust preferred securities</td>
<td>May 2006</td>
<td>6.243</td>
<td>1.0</td>
</tr>
</tbody>
</table>

1 In June 2006, USD 300 million (at 7.25%) of Trust preferred securities also issued in June 2001 were redeemed.

UBS AG has fully and unconditionally guaranteed these securities. UBS’s obligations under the trust preferred securities guarantee are subordinated to the prior payment in full of the deposit liabilities of UBS and all other liabilities of UBS. At 31 December 2010, the amount of senior liabilities of UBS to which the holders of the subordinated debt securities would be subordinated is approximately CHF 1,256 billion.

### Guarantee to UBS Ltd.

UBS AG issued a guarantee to each counterparty of UBS Ltd. Under the guarantee UBS AG irrevocably and unconditionally guarantees, for the benefit of each counterparty, each and every obligation that UBS Ltd. entered into. UBS AG promises to pay to that counterpart on demand any unpaid balance of such liabilities under the terms of the guarantee.
UBS AG (Parent Bank)

Parent Bank review

**Income statement**

Net profit for the Parent Bank UBS AG was CHF 6,123 million, an increase of CHF 11,164 million, compared with a loss of CHF 5,041 million in 2009.

*Net trading income* improved by CHF 6,977 million from negative CHF 476 million to positive CHF 6,501 million, mainly due to an improvement in the fixed income business and gains associated with the SNB transaction.

*Income from investments in associated companies* increased to CHF 1,703 million from CHF 1,154 million in 2009, mainly due to higher dividend distributions received.

*Personnel expenses* increased to CHF 10,300 million from CHF 9,101 million in 2009 mainly due to an increase in variable compensation.

*Depreciation* decreased to CHF 2,051 million from CHF 2,405 million in 2009, mainly due to lower write-downs of investments in associated companies.

*Allowances, provisions and losses* decreased to CHF 181 million from CHF 1,432 million in 2009, which included credit loss expenses of CHF 912 million.

The increase in *Extraordinary income* and in *Extraordinary expenses* is explained in the section “Additional income statement information”.

**Balance sheet**

UBS’s Parent Bank assets stood at CHF 863 billion on 31 December 2010, up slightly from CHF 848 billion on 31 December 2009. The total asset increased by CHF 15 billion due to UBS subsidiaries and third-party banks in Asia and Europe increasing their assets and therefore their funding needs from the Parent Bank.

The increases occurred in financial investments, which rose by CHF 20 billion (due to a shift from money market papers), interbank lending (up CHF 15 billion), liquid assets (up CHF 11 billion) due to larger holdings of cash and balances at central banks, and investments in associated companies (up CHF 2 billion) in the Americas and European region. These increases were partially offset by lower money market papers (down CHF 19 billion) related to the aforementioned shift to financial investments, customer loans and collateral trading (down CHF 11 billion), and positive replacement values (down CHF 4 billion). Mortgage loans remained stable in 2010 at CHF 142 billion.

**Interbank lending**

During 2010, interbank collateral trading increased by CHF 14 billion, due to higher trading volumes with UBS subsidiaries, in particular in Asia and Europe. Due from banks on time increased by CHF 4 billion, predominantly due to the higher funding needs of UBS bank subsidiaries in the Americas region. These increases were partially offset by due from banks on demand, which declined slightly by CHF 2 billion in the European region.

**Customer lending**

Customer loans decreased by CHF 11 billion as a result of lower funding needs of UBS subsidiaries (non-banks) in the Americas region, as well as lower cash collateral requirements on derivative instruments in the Americas and Europe.

**Money market papers**

The decrease in money market papers was due to a rebalance in our investment portfolio, which led to a shift from money market papers to financial investments. These instruments include highly liquid securities issued by governments and government-controlled institutions in various currencies, mainly US dollar, euro and British pound.

Notes to the Parent Bank financial statements

Accounting policies

The Parent Bank Financial Statements are prepared in accordance with Swiss Federal banking law. The accounting policies are principally the same as for the Group Financial Statements outlined in “Note 1, Summary of Significant Accounting Policies.” Major differences between the Swiss Federal banking law requirements and International Financial Reporting Standards are described in Note 40 to the consolidated financial statements. The accounting policies applied for the statutory accounts of the Parent Bank are discussed below. The risk management of UBS AG is described in the context of the risk management for UBS Group. For the statutory required risk assessment refer to the “Risk and treasury management” section of this report. For a description of the business activities refer to the “UBS business divisions and Corporate Center” section of this report.

Treasury shares

Treasury shares are own equity instruments held by an entity. Under Swiss law, treasury shares are recognized in the balance sheet as trading balances or as Financial investments. Short positions in treasury shares are recognized in Due to banks. Treasury shares recognized as trading balances and short positions in treasury shares are measured at fair value with unrealized gains or losses from remeasurement to fair value included in the income statement. Treasury shares recognized as Financial investments are valued according to the principles of lower of cost or market value. Realized gains and losses on the sale or acquisition of treasury shares are recognized in the income statement.

A reserve for own shares held for other than trading purposes must be created in equity equal to the cost value of the treasury shares held through reclassification from Other reserves. Therefore the repurchases of treasury shares held for other than trading purposes is only allowed if sufficient Other reserves are available. The Reserve for own shares is not available for distribution to shareholders.

Foreign currency translation

Assets and liabilities of foreign branches are translated into CHF at the spot exchange rate at the balance sheet date. Income and expense items are translated at weighted average exchange rates for the period. Any exchange differences arising on the translation of each of these foreign branches are recognized in the income statement.¹

¹ The description in the notes of our “foreign currency translation” accounting policy was changed to align it with our applied accounting practice. This foreign currency translation policy has been consistently applied for the two periods presented, and therefore, the change in description in the notes does not affect the financial statements of UBS AG (Parent Bank) for the years ended 31 December 2010 and 2009.

Investments in associated companies

Investments in associated companies are equity interests which are held for the purpose of the Parent Bank’s business activities or for strategic reasons. They include all directly held subsidiaries through which UBS AG conducts its banking business on a global basis. The investments are carried at cost less impairment. The carrying value is tested for impairment when indications for a decrease in value exist, which include incurrence of significant operating losses or a severe depreciation of the currency in which the investment is denominated. If an investment in associate is impaired, its value is generally written down to the net asset value. Subsequent recoveries in value are recognized up to the original cost value based on either the increased net asset value or to a value above the net asset value if in the opinion of management forecasts of future profitability provide sufficient evidence that a carrying value above net asset value is supported. Management may exercise its discretion as to what extent and in which period a recovery in value is recognized.

Deferred taxes

Deferred tax assets are not recognized in the Parent Bank Financial Statements under Swiss Federal banking law. However, deferred tax liabilities may be recognized for taxable temporary differences. The change in the deferred tax liability balance is recognized in profit or loss.

Equity participation and other compensation plans

Equity participation plans

Under Swiss law, employee share awards are recognized as compensation expenses and accrued over the performance year, which is generally the period prior to the grant date. Employee option awards which do not contain voluntary termination non-compete provisions are recognized as compensation expenses on the grant date. If the award is performance based and contains substantive future service/vesting conditions, compensation expenses are recognized during the performance period. Employee option awards which contain voluntary termination non-compete provisions (i.e. good leaver clause) are recognized as compensation expenses over the performance year. Equity- and cash-settled
awards are classified as liabilities. The employee share option awards are remeasured to fair value at each balance sheet date. However, for employee share options that UBS intends to settle in shares from conditional capital, there is no impact on the income statement and no liability is recognized. Upon exercise of employee options, cash received for payment of the strike price is credited against share capital and general statutory reserve.

Other compensation plans
Fixed and variable deferred cash compensation is recognized as compensation expenses over the performance year. If the award is performance based and contains substantive future service/vesting conditions, compensation expenses are recognized during the performance period.

Changes in accounting policies, comparability and other adjustments
Equity participation and other compensation plans
Employee share option awards, which UBS intends to settle using treasury shares, are classified as liabilities and are re-measured to fair value at each balance sheet date. As of 1 January 2010, UBS simplified its approach to determine the fair value of such employee share option awards (see details in Note 31 to the consolidated financial statements). UBS compared the values generated by the new model to those of the original model and concluded that fair values obtained from the new valuation model are not materially different from the fair values obtained from the original model. A valuation difference of CHF 12 million was recognized as an expense in trading income. Employee share option awards that are settled by issuing new shares out of conditional capital are not affected by this model change as no compensation expense and no liability is recognized.

Own bonds held for trading and market making activities
In 2010, UBS changed its accounting policy for owns bonds held. Own bonds held for trading and market making purposes are no longer treated as extinguishment of debt, but are rather classified as trading assets. Gains and losses from trading and market making activities are reported in trading income.

Financial liabilities designated at fair value
In December 2010, FINMA issued a “Frequently Asked Questions” document that amends FINMA circular 08/2 to allow designation of issued structured products that meet certain conditions as at fair value through profit or loss. Changes in fair value attributable to a change in own credit are not recognized. Issued structured products are hybrid instruments that consist of a debt host contract and a bifurcable embedded derivative(s). UBS adopted this amendment to FINMA circular 08/2 for year-end 2010. Issued structured products designated at fair value are presented on the face of the balance sheet in the line Financial liabilities designated at fair value. The difference between fair value and amortized cost upon transition is recorded in trading income and resulted in a trading loss of approximately CHF 988 million.

Capital contribution reserves
Under Swiss tax law, effective 1 January 2011, repayments of capital contribution reserves established since 1997 are no longer subject to withholding tax deduction. The presentation of the balance sheet has been changed to present the components of the General statutory reserve, Reserve for own shares and Other reserves accounts within shareholders’ equity. Amounts in these reserve accounts originate either from share premiums paid in connection with the issue of new shares or profits or losses transferred to any of these reserve accounts (retained earnings). This more detailed presentation has been made to establish the amount of capital contribution reserves that UBS may be able to repay to shareholders without being subject to the withholding tax deduction that applies to dividends paid out of retained earnings. Such amount is subject to approval from the Swiss Tax Authorities. The comparative prior year period conforms to the current year presentation.

In an additional column, the balance sheet as of 31 December 2010 is presented taking into account the proposed appropriation of the available profit to reserves.

Extraordinary income and expenses

Extraordinary income 2010 was mainly comprised of the following items: merger gains and gains from sale of subsidiaries and associated companies of CHF 601 million; reversal of write-downs of investments in associated companies of CHF 2,337 million (2009: CHF 265 million), mainly in the United States; a number of prior period related valuation corrections aggregating CHF 741 million related to (i) share-based compensation plans, (ii) financial instruments which, unlike under IFRS, cannot be accounted for at fair value through profit or loss according to FINMA circular 08/2, (iii) financial investments carried at lower of cost or market value, and (iv) miscellaneous other valuation adjustments; and a release of other liabilities of CHF 227 million.

Extraordinary expenses in 2010 included losses from the sale of subsidiaries and associated companies of CHF 18 million (2009: CHF 48 million) and prior year related valuation corrections of CHF 160 million.

### Shares issued

On 5 March 2010, the mandatory convertible notes (MCNs) with a notional value of CHF 13 billion issued in March 2008 to the Government of Singapore Investment Corporation Pte. Ltd. and an investor from the Middle East were converted into UBS shares. The notes were converted at a price of CHF 47.68 per share. As a result, UBS issued 272,651,005 new shares with a nominal value of CHF 0.10 each from existing conditional capital. The MCNs were treated as equity instruments and recognized in Share premium.

### Conditional share capital

On 31 December 2010, 149,920,712 shares were available for issue to fund UBS’s employee share option programs. In addition, conditional capital of up to 100,000,000 shares was available in connection with the Swiss National Bank (SNB) transaction. Furthermore, on 14 April 2010 the annual general meeting of UBS AG approved the creation of conditional capital up to a maximum amount of 380,000,000 shares for conversion rights/warrants granted in connection with the issuance of bonds or similar financial instruments.

### Significant shareholders

According to disclosure notifications filed with UBS AG and the SIX Swiss Exchange, on 8 June 2010, The Capital Group Companies, Inc., Los Angeles, disclosed a holding of 4.90% of the total share capital of UBS AG. On 12 March 2010, the Government of Singapore, Singapore, as beneficial owner, disclosed under the Swiss Stock Exchange Act, a holding by the Government of Singapore Investment Corp. of 6.45% of the total share capital of UBS AG. On 17 December 2009, BlackRock Inc., New York, disclosed according to the Swiss Stock Exchange Act, a holding of 3.45% of the total share capital of UBS AG (3.21% of the total share capital as of 11 March 2010).

According to UBS’s share register, the shareholders (acting in their own name or in their capacity as nominees for other investors or beneficial owners) listed in the table below, were registered with 3% or more of the total share capital as of 31 December 2010.

</tbody>
</table>

Contingent liabilities include indemnities and guarantees issued by UBS AG for the benefit of subsidiaries and creditors of subsidiaries. In instances where the indemnity amount issued by the Parent Bank is not defined, the indemnity relates to the solvency or minimum capitalization of a subsidiary, and therefore no amount is included in the table above. This policy has been applied since 2010. The prior year amounts have been adjusted to conform to the current year’s presentation.

Irrevocable commitments and securities delivery obligations: From 2010 onwards, collateralized forward starting transactions are presented in this table; the comparative period has been adjusted accordingly. Irrevocable commitments include cash payment obligations from forward starting reverse repos and securities borrowing transactions. Irrevocable securities delivery obligations related to forward starting repos and securities lending transactions are presented on a separate line.

UBS AG is jointly and severally liable for the value added tax (VAT) liability of Swiss subsidiaries that belong to its VAT group.

</table>

1 Number and distribution of GEB members: 13 GEB members in office on 31 December 2010 and on 31 December 2009 respectively.
2 Number and distribution of former GEB members for 2010 includes Francesco Moria (three months in office, including a notice period of six months); and 2009 includes Marcel Rohner (two months in office), Walter H. Stürzinger and Raoul Weil (three months in office), Jerker Johansson (four months in office), Rory Tapner (six months in office) and Marten Hoekstra (10 months in office).
3 In 2010, for John Cryan, Carsten Kengeter and Alexander Wilmot-Sitwell, deferred cash includes blocked shares.
4 Included in the share awards are SEEOP awards at a fair value of GBP 4,655,950 and EOP awards at a fair value of GBP 1,594,250.

Explanation of the tables outlining compensation details for GEB members and non-independent BoD members

a. Local currencies are converted into CHF using the exchange rates as detailed in Note 39 “Currency translation rates” in the “Financial information” section of this report.
b. Of the cash award, 60% is paid out immediately (representing 24% of a GEB member’s total annual bonus). The balance is paid out in equal installments of 20%, each over the subsequent two years, and is subject to forfeiture.
c. Value of each performance share at grant: CHF 18.70 for PEP awards granted in 2011 relating to the performance year 2010; CHF 36.30 for PEP awards granted in 2010 relating to the performance year 2009; and CHF 22.20 for IPP awards granted in 2010 relating to the performance year 2009. These values are based on valuations for accounting purposes which take into account the performance conditions and the range of possible outcomes for these conditions.
d. SEEOP is a pre-existing compensation plan that has been updated and re-introduced. SEEOP awards vest in equal installments over five years and are subject to forfeiture. The grant date accounting value per share granted under SEEOP in 2011 relating to the performance year 2010 at grant is CHF 18.43 or USD 19.94 (actual shares) and CHF 18.30 or USD 19.80 (notional shares).
e. Benefits in kind are all valued at market price, for example, health and welfare benefits and general expense allowances.
f. Swiss executives participate in the same pension plan as all other employees. Under this plan, UBS makes contributions to the plan, which covers compensation of up to CHF 820,800. The retirement benefits consist of a pension, a bridging pension and a one-off payout of accumulated capital. Employees must also contribute to the plan. This figure excludes the mandatory employer’s social security contributions (AHV, ALV), but includes the portion attributed to the employer’s portion of the legal BVG requirement. The employee contribution is included in the base salary and annual incentive award components.

In both the US and the UK, senior management participates in the same pension plans as all other employees. In the US, there are separate pension plans for Wealth Management Americas compared with the other business divisions. There are generally two different types of pension plans. The grandfathered plans, which are no longer open to new hires, operate (depending on the abovementioned distinction by business division) either on a cash balance basis or a career average salary basis. Participants accrue a pension based on their annual compensation limited to USD 250,000 (or USD 150,000 for Wealth Management Americas employees). The principal plans for new hires are defined contribution plans. In the defined contribution plans, UBS makes contributions to the plan based on compensation and limited to USD 245,000. US management may also participate in a 401(k) defined contribution plan (open to all employees), which provides a limited company matching contribution for employee contributions. In the UK, management participates in either the principal pension plan, which operates on a defined contribution basis and is limited to an earnings cap of GBP 100,000, or a grandfathered defined benefit plan which provides a pension upon retirement based on career average base salary (individual caps introduced as of 1 July 2010).

**Total 2009** | | | | | | | 6,425,000 |

Legend: C = Chairperson of the respective Committee; M = Member of the respective Committee

\(^1\) There were 10 independent BoD members in office on 31 December 2010. Wolfgang Mayhuber was appointed at the AGM on 14 April 2010 and Sergio Marchionne and Peter Voser stepped down from the BoD at the AGM on 14 April 2010. There were 11 independent BoD members in office on 31 December 2009. Michel Demaré, Ann F. Godbehere and Axel P. Lehmann were appointed at the AGM on 15 April 2009 and Ernesto Bertarelli, Gabriele Kaufmann-Kohler and Jörg Wille stepped down from the BoD at the AGM on 15 April 2009.

\(^2\) Fees are paid 50% in cash and 50% in blocked UBS shares. However, independent BoD members can elect to have 100% of their remuneration paid in blocked UBS shares. For 2010, shares valued at CHF 18.56 (average price of UBS shares at SIX Swiss Exchange over the last 10 trading days of February 2011), included a price discount of 15%, for a new value of discount price CHF 15.78. These shares are blocked for four years. For 2009, shares valued at CHF 14.57 (average price of UBS shares at SIX Swiss Exchange over the last 10 trading days of February 2010), included a price discount of 15%, for a new value of discount price CHF 12.38. These shares are blocked for four years. The number of shares is reduced in case of the 100% election to have 100% of their remuneration paid in blocked UBS shares. 

\(^3\) This payment is associated with the Vice Chairman or the SID function, respectively.

To the General Meeting of
UBS AG, Zurich and Basel

Basel, 3 March 2011

Report of the statutory auditor on the financial statements

As statutory auditor, we have audited the financial statements which comprise the balance sheet, income statement and notes on pages 380 to 399 of UBS AG for the year ended 31 December 2010.

Board of Directors’ responsibility

The Board of Directors is responsible for the preparation of the financial statements in accordance with the requirements of Swiss law and the Company’s articles of association. This responsibility includes designing, implementing and maintaining an internal control system relevant to the preparation of financial statements that are free from material misstatement, whether due to fraud or error. The Board of Directors is further responsible for selecting and applying appropriate accounting policies and making accounting estimates that are reasonable in the circumstances.

Auditor’s responsibility

Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with Swiss law and Swiss Auditing Standards. Those standards require that we plan and perform the audit to obtain reasonable assurance whether the financial statements are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor’s judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers the internal control system relevant to the entity’s preparation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity’s internal control system. An audit also includes evaluating the appropriateness of the accounting policies used and the reasonableness of accounting estimates made, as well as evaluating the overall presentation of the financial statements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Opinion

In our opinion, the financial statements for the year ended 31 December 2010 comply with Swiss law and the Company’s articles of association.
Report on other legal requirements

We confirm that we meet the Swiss legal requirements on licensing according to the Auditor Oversight Act (AOA) and independence (Art. 728 Code of Obligations (CO) and Art. 11 AOA) and that there are no circumstances incompatible with our independence.

In accordance with article 728a paragraph 1 item 3 CO and Swiss Auditing Standard 890, we confirm that an internal control system exists, which has been designed for the preparation of financial statements in accordance with the instructions of the Board of Directors.

We further confirm that the proposed appropriation of available earnings complies with Swiss law and the Company’s articles of association. We recommend that the financial statements submitted to you be approved.

Confirmation of the auditors concerning conditional capital increase

to the Board of Directors of
UBS AG, Zurich and Basel

As special auditors of UBS AG, we have audited the issue of new shares and the preconditions for the adjustment of the provisions regarding the conditional capital increase according to article 4a of the articles of association in the period from 1 January 2010 to 5 March 2010 in accordance with the provisions of article 653f paragraph 1 of the Swiss code of obligations.

According to article 4a of the articles of association, the following possibilities for the issue of conditional capital exist:

- Paragraph 2: employee stock option plans of UBS AG, based on the resolution of the annual general meeting of 19 April 2006.
- Paragraph 3: 9% mandatory convertible notes due 2010, based on the resolution of the general meeting of shareholders of 27 February 2008.

In addition we have audited the expiration of options relating to the employee stock option plans of Paine Webber Group Inc., New York, in accordance with the provisions of article 653i paragraph 1 of the Swiss code of obligations.

The issue of new shares in accordance with the provisions of the company’s articles of association is the responsibility of the board of directors. Our responsibility is to express an opinion on whether the issue of new shares is in accordance with the provisions of Swiss law and the company’s articles of association. In addition, the provision of evidence that the option rights have expired is also the responsibility of the board of directors. Our responsibility is to express an opinion on the accuracy of this statement, based on our audit. We confirm that we meet the legal requirements on licensing and independence.

Our audit was conducted in accordance with the Swiss auditing standards, which require that an audit be planned and performed to obtain reasonable assurance as to whether the issue of new shares, and whether the conclusion as to the expired option rights, were both free of material error. We have performed the audit procedures considered appropriate in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

In our opinion:

- the issue of 3,171 new registered shares of a nominal value of CHF 0.10 per share relating to the employee stock option plans of Paine Webber Group Inc., New York, according to article 4a paragraph 1 of the articles of association, was in accordance with the provisions of Swiss law and the company’s articles of association. Furthermore, no option rights relating to registered shares of a nominal value of CHF 0.10 per share have expired during the reporting period;
- the issue of 2,456 new registered shares of a nominal value of CHF 0.10 per share relating to the employee stock option plans of UBS AG, according to article 4a paragraph 2 of the articles of association, was in accordance with the provisions of Swiss law and the company’s articles of association;
- the issue of 272,651'005 registered shares of a nominal value of CHF 0.10 per share in conjunction with the total conversion of the 9% mandatory convertible notes due in 2010, according to article 4a paragraph 3 of the articles of association, was in accordance with the provisions of Swiss law and the company’s articles of association as well as the defined conditions of the conversion rights;
- no new registered shares relating to the options granted to the Swiss National Bank, according to article 4a paragraph 4 of the articles of association, were issued in the reporting period.

Confirmation of the auditors concerning conditional capital increase

to the Board of Directors of

UBS AG, Zurich and Basel

As special auditors of UBS AG, we have audited the issue of new shares and the preconditions for the adjustment of the provisions regarding the conditional capital increase according to article 4a of the articles of association in the period from 6 March 2010 to 31 August 2010 in accordance with the provisions of article 653i paragraph 1 of the Swiss code of obligations.

According to article 4a of the articles of association, the following possibilities for the issue of conditional capital exist:

- Paragraph 2: employee stock option plans of UBS AG, based on the resolution of the annual general meeting of 19 April 2006.
- Paragraph 4: conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments, based on the resolution of the annual general meeting of 14 April 2010.

In addition we have audited the expiration of options relating to the employee stock option plans of Paine Webber Group Inc., New York, in accordance with the provisions of article 653i paragraph 1 of the Swiss code of obligations.

The issue of new shares in accordance with the provisions of the company’s articles of association is the responsibility of the board of directors. Our responsibility is to express an opinion on whether the issue of new shares is in accordance with the provisions of Swiss law and the company’s articles of association. In addition, the provision of evidence that the option rights have expired is also the responsibility of the board of directors. Our responsibility is to express an opinion on the accuracy of this statement, based on our audit. We confirm that we meet the legal requirements on licensing and independence.

Our audit was conducted in accordance with the Swiss auditing standards, which require that an audit be planned and performed to obtain reasonable assurance as to whether the issue of new shares, and whether the conclusion as to the expired option rights, were both free of material error. We have performed the audit procedures considered appropriate in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

In our opinion

- the cancellation of 26,179 option rights relating to registered shares of a nominal value of CHF 0.10 per share in connection with the employee stock option plans of Paine Webber Group Inc., New York, according to article 4a paragraph 1 of the articles of association, and the repeal of the related clause of the articles of association, are in accordance with the provisions of Swiss law;
- the issue of 13,778 new registered shares of a nominal value of CHF 0.10 per share relating to the employee stock option plans of UBS AG, according to article 4a paragraph 2 of the articles of association, was in accordance with the provisions of Swiss law and the company’s articles of association;
- no new registered shares relating to the options granted to the Swiss National Bank, according to article 4a paragraph 3 of the articles of association, were issued in the reporting period;
- no new registered shares relating to the conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments, according to article 4a paragraph 4 of the articles of association, were issued in the reporting period.

Confirmation of the auditors concerning conditional capital increase

to the Board of Directors of

UBS AG, Zurich and Basel

As special auditors of UBS AG, we have audited the issue of new shares and the preconditions for the adjustment of the provisions regarding the conditional capital increase according to article 4a of the articles of association in the period from 1 September 2010 to 31 December 2010 in accordance with the provisions of article 633f paragraph 1 of the Swiss code of obligations.

According to article 4a of the articles of association, the following possibilities for the issue of conditional capital exist:

- Paragraph 1; employee stock option plans of UBS AG, based on the resolution of the annual general meeting of 19 April 2006.
- Paragraph 2; options granted to the Swiss National Bank in connection with its loan granted to the SNB StabFund Limited Partnership for Collective Investment, based on the resolution of the general meeting of shareholders of 27 November 2008.
- Paragraph 3; conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments, based on the resolution of the annual general meeting of 14 April 2010.

The issue of new shares in accordance with the provisions of the company’s articles of association is the responsibility of the board of directors. Our responsibility is to express an opinion on whether the issue of new shares is in accordance with the provisions of Swiss law and the company’s articles of association. We confirm that we meet the legal requirements on licensing and independence.

Our audit was conducted in accordance with the Swiss auditing standards, which require that an audit be planned and performed to obtain reasonable assurance as to whether the issue of new shares was free of material error. We have performed the audit procedures considered appropriate in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

In our opinion

- the issue of 35,245 new registered shares of a nominal value of CHF 0.10 per share relating to the employee stock option plans of UBS AG, according to article 4a paragraph 1 of the articles of association, was in accordance with the provisions of Swiss law and the company’s articles of association;
- no new registered shares relating to the options granted to the Swiss National Bank, according to article 4a paragraph 2 of the articles of association, were issued in the reporting period;
- no new registered shares relating to the conversion rights and/or warrants granted in connection with the issuance of bonds or similar financial instruments, according to article 4a paragraph 3 of the articles of association, were issued in the reporting period.

### Ratio of earnings to fixed charges

The following table sets forth UBS's ratio of earnings to fixed charges on an IFRS basis for the periods indicated. The ratios are calculated based on earnings from continuing operations. Ratios of earnings to combined fixed charges and preferred stock dividend requirements are not presented as there were no preferred share dividends in any of the periods indicated.

C – Information on the company

Property, plant and equipment

At 31 December 2010, UBS operated about 907 business and banking locations worldwide, of which about 43% were in Switzerland, 41% in the Americas, 11% in the rest of Europe, Middle East and Africa and 5% in Asia-Pacific. Of the business and banking locations in Switzerland, 36% were owned directly by UBS, with the remainder, along with most of UBS’s offices outside Switzerland, being held under commercial leases.

These premises are subject to continuous maintenance and upgrading and are considered suitable and adequate for current and anticipated operations.
Selected statistical information

The tables below set forth selected statistical information regarding the Group’s banking operations extracted from the Financial Statements. Unless otherwise indicated, average balances for the years ended 31 December 2010, 31 December 2009 and 31 December 2008 are calculated from monthly data. The distinction between domestic and foreign is generally based on the booking location. For loans, this method is not significantly different from an analysis based on the domicile of the borrower.

Average balances and interest rates

The following table sets forth average interest-earning assets and average interest-bearing liabilities, along with the average rates, for the years ended 31 December 2010, 2009 and 2008.

</tr>
</tbody>
</table>
The percentage of total average interest-earning assets attributable to foreign activities was 78% for 2010 (81% for 2009 and 85% for 2008). The percentage of total average interest-bearing liabilities attributable to foreign activities was 77% for 2010 (81% for 2009 and 84% for 2008). All assets and liabilities are translated into CHF at uniform month-end rates. Interest income and expense are translated at monthly average rates.

Average rates earned and paid on assets and liabilities can change from period to period based on the changes in interest rates in general, but are also affected by changes in the currency mix included in the assets and liabilities. This is especially true for foreign assets and liabilities. Tax-exempt income is not recorded on a tax-equivalent basis. For all three years presented, tax-exempt income is considered to be insignificant and the impact from such income is therefore negligible.
## Analysis of changes in interest income and expense

The following tables allocate, by categories of interest-earning assets and interest-bearing liabilities, the changes in interest income and expense due to changes in volume and interest rates for the year ended 31 December 2010 compared with the year ended 31 December 2009, and for the year ended 31 December 2009 compared with the year ended 31 December 2008. Volume and rate variances have been calculated on movements in average balances and changes in interest rates. Changes due to a combination of volume and rates have been allocated proportionally. Refer to the appropriate section of Industry Guide 3 for a discussion of the treatment of impaired and non-performing loans.

Deposits

The following table analyzes average deposits and the average rates on each deposit category listed below for the years ended 31 December 2010, 2009 and 2008. The geographic allocation is based on the location of the office or branch where the deposit is made. Deposits by foreign depositors in domestic offices were CHF 63,953 million, CHF 54,957 million and CHF 45,082 million as of 31 December 2010, 31 December 2009 and 31 December 2008, respectively.

¹ Debt instruments without fixed maturities are not disclosed in this table. Refer to Note 13. ² Average yields are calculated on an amortized cost basis. ³ Absolute Return Bonds (ARBs) had been purchased below par and therefore generated a yield of 15.8% (21.8% in 2009).
Due from banks and loans (gross)

The Group’s lending portfolio is widely diversified across industry sectors with no significant concentrations of credit risk. CHF 151.2 billion (53.1% of the total) consists of loans to thousands of private households, predominantly in Switzerland, and mostly secured by mortgages, financial collateral or other assets. Exposure to banks and financial institutions amounted to CHF 63.8 billion (22.4% of the total). Exposure to banks includes money market deposits with highly rated institutions. Excluding banks and financial institutions, the largest industry sector exposure as of December 2010 is CHF 15.3 billion (5.4% of the total) to services. For further discussion of the loan portfolio, refer to the “Credit risk” section of this report.

The following table illustrates the diversification of the loan portfolio among industry sectors at 31 December 2010, 2009, 2008, 2007 and 2006. The industry categories presented are consistent with the classification of loans for reporting to the Swiss Financial Market Supervisory Authority (FINMA) and Swiss National Bank.

Impaired and non-performing loans

A loan (included in Due from banks or Loans) is classified as non-performing: 1) when the payment of interest, principal or fees is overdue by more than 90 days and there is no firm evidence that it will be made good by later payments or the liquidation of collateral; 2) when insolvency proceedings have commenced; or 3) when obligations have been restructured on concessionary terms.

UBS does not, as a matter of policy, typically restructure loans to accrue interest at rates different from the original contractual terms or reduce the principal amount of loans. For more information refer to the “Credit risk” section of this report. Instead, specific loan allowances are established as necessary. Unrecognized interest related to restructured loans was not material to the results of operations in 2010, 2009, 2008, 2007 or 2006.

In addition to the non-performing loans shown above, the Group has CHF 2,466 million, CHF 1,463 million, CHF 4,442 million, CHF 911 million and CHF 710 million in “other impaired loans” for the years ended 31 December 2010, 2009, 2008, 2007 and 2006, respectively.

Other impaired loans are loans where the Group’s credit officers have expressed doubts as to the ability of the borrowers to repay the loans. For the years ended 31 December 2010, 2009, 2008, 2007 and 2006, these loans are not considered “non-performing” in accordance with Swiss regulatory guidelines. As of 31 December 2010, 31 December 2009, 31 December 2008, 31 December 2007 and 31 December 2006, specific allowances of CHF 536 million, CHF 410 million, CHF 941 million, CHF 124 million, CHF 106 million, respectively, had been established against these loans.
Cross-border outstandings

Cross-border outstandings consist of exposures in relation to (i) general banking products with third parties, such as loans and advances, (ii) over-the-counter (OTC) derivatives, exchange-traded (ETD) derivatives and securities financing transactions, which are represented as a credit equivalent based on UBS's internal risk measures, and (iii) the market value of the inventory of debt securities. Outstandings are monitored and reported on an ongoing basis by the credit risk control organization with a dedicated country risk information system. With the exception of the largest most developed economies, to which UBS assigns a high rating, and a small number of financial centers, where the credit quality of UBS's exposures is not correlated with the state of their internal economy, these exposures are rigorously limited.

Claims that are secured by third-party guarantees are recorded against the guarantor's country of domicile. Outstandings that are secured by collateral are recorded against the country where the asset could be liquidated. This follows the "Guidelines for the Management of Country Risk", which are applicable to all banks that are supervised by the Swiss Financial Market Supervisory Authority (FINMA).

The following tables list those countries for which cross-border outstandings exceeded 0.75% of total assets at 31 December 2010, 2009 and 2008. At 31 December 2010, there were no outstandings that exceeded 0.75% of total assets in any country currently facing liquidity problems that the Group expects would materially affect the country’s ability to service its obligations.

For more information on country exposure, refer to the “Credit risk” section of this report.

Summary of movements in allowances and provisions for credit losses

The following table provides an analysis of movements in allowances and provisions for credit losses.

UBS writes off loans against allowances only on final settlement of bankruptcy proceedings, the sale of the underlying assets and/or in case of debt forgiveness. Under Swiss law, a creditor can continue to collect from a debtor who has emerged from bankruptcy, unless the debt has been forgiven through a formal agreement.

\(^1\) Includes chemicals, food and beverages, transportation, storage, mining, electricity, gas and water supply.
\(^2\) Includes food and beverages, hotels and restaurants.
\(^3\) In 2009 the Other adjustment was due to the sale of UBS Pactual. In 2008 a loan was forgiven in exchange for the collateral.
The following table provides an analysis of the allocation of the allowances and provisions for credit loss by industry sector and geographic location at 31 December 2010, 2009, 2008, 2007 and 2006. For a description of procedures with respect to allowances and provisions for credit losses, refer to the “Credit risk” section of this report.

### Due from banks and loans by industry sector (gross)

The following table presents the percentage of loans in each industry sector and geographic location to total loans. This table can be read in conjunction with the preceding table showing the breakdown of the allowances and provisions for credit losses by industry sectors to evaluate the credit risks in each of the categories.

1 Includes Due from banks and Loans from Industrial Holdings in the amount of CHF 27 million for 2007 and CHF 93 million 2006.
2 Includes collective loan loss provisions.
3 Allowances relating to impaired loans only.
4 Allowances relating to non-performing loans only.
Cautionary Statement Regarding Forward-Looking Statements | This report contains statements that constitute “forward-looking statements”, including but not limited to management’s outlook for UBS’s financial performance and statements relating to the anticipated effect of transactions and strategic initiatives on UBS’s business and future development. While these forward-looking statements represent UBS’s judgments and expectations concerning the matters described, a number of risks, uncertainties and other important factors could cause actual developments and results to differ materially from UBS’s expectations. These factors include, but are not limited to: (1) developments in the markets in which UBS operates or to which it is exposed, including movements in securities prices or liquidity, credit spreads, currency exchange rates and interest rates and the effect of economic conditions and market developments on the financial position or creditworthiness of UBS’s clients and counterparties; (2) changes in the availability of capital and funding, including any changes in UBS’s credit spreads and ratings; (3) the ability of UBS to retain earnings and reduce its risk-weighted assets in order to comply with recommended Swiss capital requirements without adversely affecting its business; (4) changes in financial regulation in Switzerland, the US, the UK and other major financial centers which may impose constraints on or necessitate changes in the scope and location of UBS’s business activities and in its legal and booking structures, including the imposition of more stringent capital and liquidity requirements, incremental tax requirements and constraints on remuneration, some of which may affect UBS in a different manner or degree than they affect competing institutions; (5) the liability to which UBS may be exposed due to legal claims and regulatory investigations, including those stemming from market dislocation and losses incurred by clients and counterparties during the financial crisis; (6) the outcome and possible consequences of pending or future inquiries or actions concerning UBS’s cross-border banking business by tax or regulatory authorities in various jurisdictions; (7) the degree to which UBS is successful in effecting organizational changes and implementing strategic plans, and whether those changes and plans will have the effects intended; (8) UBS’s ability to retain and attract the employees necessary to generate revenues and to manage, support and control its businesses; (9) changes in accounting standards or policies, and accounting determinations affecting the recognition of gain or loss, the valuation of goodwill and other matters; (10) limitations on the effectiveness of UBS’s internal processes for risk management, risk control, measurement and modeling, and of financial models generally; (11) changes in the size, capabilities and effectiveness of UBS’s competitors, including whether UBS will be successful in keeping pace with competitors in updating its technology, particularly in trading businesses; and (12) the occurrence of operational failures, such as fraud, unauthorized trading and systems failures, either within UBS or within a counterparty. Our business and financial performance could be affected by other factors identified in our past and future filings and reports, including those filed with the SEC. More detailed information about those factors is set forth in documents furnished by UBS and filings made by UBS with the SEC, including UBS’s Annual Report on Form 20-F for the year ended 31 December 2010. UBS is not under any obligation to (and expressly disclaims any obligation to) update or alter its forward-looking statements, whether as a result of new information, future events, or otherwise.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages and percent changes are calculated based on rounded figures displayed in the tables and text and may not precisely reflect the percentages and percent changes that would be derived based on figures that are not rounded.
