Introduction

This report provides an update to our Bank for International Settlements (BIS) Basel III Pillar 3 disclosures as presented in our Annual Report 2014 to the extent that this information was not already provided in our first and second quarter 2015 reports. This report relates to UBS Group AG on a consolidated Pillar basis as 3 disclosure requirements are applicable at this level. An exception is the requirement to disclose total and tier 1 capital ratios related to the significant bank subsidiaries UBS AG, UBS Switzerland AG and UBS Limited, which are presented in the "Financial information" section of our second quarter 2015 report. Furthermore, selected regulatory information for UBS AG (consolidated) is presented in the "Capital management" section of our second quarter 2015 report.

The capital adequacy framework consists of three complementary pillars. Pillar 1 provides a framework for measuring minimum capital requirements for the credit, market, operational and non-counterparty-related risks faced by banks. Pillar 2 addresses the principles of the supervisory review process, emphasizing the need for a qualitative approach to supervising banks. Pillar 3 aims to encourage market discipline by requiring banks to publish a range of disclosures, mainly on risk and capital.

This report is based on phase-in rules under the BIS Basel III framework, as implemented by the revised Swiss Capital Adequacy Ordinance issued by the Swiss Federal Council, and required by Swiss Financial Market Supervisory Authority (FINMA) regulation. Further, as UBS is considered a systemically relevant bank (SRB) under Swiss banking law, UBS Group and UBS AG are required to comply with regulations based on the Basel III framework as applicable for Swiss SRB on a consolidated basis. FINMA requires us to publish comprehensive quantitative and qualitative Pillar 3 disclosures annually, as well as an update of quantitative disclosures and any significant changes to qualitative information semiannually. In the first half of 2015, we did not have any significant changes to qualitative information.

Capital information as of 30 June 2015 for UBS Group AG (consolidated) and UBS AG (consolidated) is provided in the "Capital management" section of our second guarter 2015 report.

- ➔ Refer to the "Capital management" section of our second quarter 2015 report for more information on regulatory requirements and differences between the Swiss SRB and BIS Basel III capital regulations
- → Refer to the "Pillar 3, SEC filings & other disclosures" section at www.ubs.com/investors for more information on G-SIBs indicators and previous Pillar 3 reports

Revised Pillar 3 disclosure requirements

In January 2015, the Basel Committee on Banking Supervision (BCBS) issued revised Pillar 3 disclosure requirements that aim to improve comparability and consistency of disclosures, through the introduction of harmonized templates. The revised requirements will take effect at the end of 2016.

➔ Refer to the "Regulatory and legal developments" section of our Annual Report 2014 for more information on the revised Pillar 3 disclosure requirements

Location of Pillar 3 disclosures

The following table provides an overview of Pillar 3 disclosures in our UBS Group AG Annual Report 2014 and our second quarter 2015 report, where relevant.

Pillar 3 disclosures	Location in our UBS Group AG Annual Report 2014	Location in our second quarter 2015 report
Scope of consolidation	Financial information – Note 1 Summary of significant accounting policies (on pages 405– 425) UBS Group AG consolidated supplemental	

	disclosures required under Basel III Pillar 3 regulations as of 31 December 2014 Scope of regulatory consolidation (on page 605) Table 1c: Main legal entities consolidated under IFRS but not included in the regulatory scope of consolidation	
Capital structure	Capital management (on pages 251–260)	Capital management (on pages 91 and 97) Financial information (on pages 184, 188 and 191)
Capital adequacy	Capital management (on pages 245–275)	Capital management (on pages 88–113) Financial information (on pages 184, 188 and 191)
Capital instruments	Capital management (on pages 255–256) "Bondholder information" at www.ubs.com/investors	Capital management (on page 95) "Bondholder information" at <i>www.ubs.com/investors</i>
Risk management objectives, policies and methodologies – qualitative disclosures	Risk management and control (on pages 170– 231)	

Pillar 3 disclosures	Location in our UBS Group AG	Location in our second quarter
Risk-weighted assets	Annual Report 2014 Capital management (on pages 261–267) UBS Group AG consolidated supplemental disclosures required under Basel III Pillar 3 regulations as of 31 December 2014 Segmentation of Basel III exposures and risk- weighted assets (on pages 606–608) Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets	2015 report ¹ Capital management (on pages 100–104)
Credit risk	Risk management and control (on page 181 and pages 198–203) Information on - Impaired assets by region, - Impaired assets by exposure segment, - Changes in allowances and provisions, and on - Total expected loss and actual credit losses (on pages 185–190 and page 203) UBS Group AG consolidated supplemental disclosures required under Basel III Pillar 3 regulations as of 31 December 2014 Credit risk (on pages 609–626) Table 3: Regulatory gross credit risk by exposure segment and RWA Table 4: Regulatory gross credit exposure by geographical region Table 5: Regulatory gross credit exposure by counterparty type Table 6: Regulatory gross credit exposure by residual contractual maturity Table 7: Derivation of regulatory net credit exposure Table 8: Regulatory gross credit exposure covered by guarantees and credit derivatives Table 9: Sovereigns – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9b: Banks – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9c: Corporates – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9d: Residential mortgages – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9d: Residential mortgages – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9d: Residential mortgages – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9d: Combard lending – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 9f: Qualifying revolving retail exposures – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD	

	and RWA by internal UBS ratings Table 9g: Other retail – Advanced IRB approach: Regulatory net credit exposure, weighted average PD, LGD and RWA by internal UBS ratings Table 10a: Regulatory gross and net credit exposure by risk weight under the standardized approach Table 10b: Regulatory net credit exposure under the standardized approach risk- weighted using external ratings Table 11: Eligible financial collateral recognized under the standardized approach Table 12: Credit exposure of derivative instruments Table 13: Credit derivatives Table 14: Equity instruments in the banking book

Our approach to measuring risk exposure and riskweighted assets

Measures of risk exposure may differ depending on whether the exposures are calculated for financial accounting purposes under International Financial Reporting Standards (IFRS), for determining our regulatory capital or for risk management purposes. Our Basel III Pillar 3 disclosures are generally based on measures of risk exposure used to determine the regulatory capital required to underpin those risks.

The table below provides a summary of the approaches we use for the main risk categories to determine regulatory capital.

The naming conventions for the exposure segments used in the following tables are based on BIS rules and may differ from those under Swiss and European Union (EU) regulations. For example, "sovereigns" under the BIS naming convention are termed "central governments and central banks" under the Swiss and EU regulations. Similarly, "banks" are "institutions" and "residential mortgages" are "claims secured by residential real estate."

Our risk-weighted assets (RWA) are published according to the BIS Basel III framework, as implemented by the revised Swiss Capital Adequacy Ordinance issued by the Swiss Federal Council and required by FINMA regulation.

→ Refer to the "Capital management" section of our second quarter 2015 report for more information on differences between Swiss SRB and BIS Basel III capital regulations

Category	UBS approach
Credit risk	
Counterparty credit risk by exposure segment	Under the advanced internal ratings-based (A-IRB) approach applied for the majority of our businesses, counterparty risk weights are determined by reference to internal counterparty ratings and loss given default estimates. We use internal models to measure the credit risk exposures to third parties on derivatives and securities financing transactions. All internal credit risk models are approved by FINMA. For a subset of our credit portfolio, we apply the standardized approach, based on external ratings.
Securitization/re-securitization in the banking book	Securitization/re-securitization exposures in the banking book are generally assessed using the ratings-based approach, applying risk weights based on external ratings. For certain exposures, the supervisory formula-based approach is applied, considering the A-IRB risk weights.
Equity instruments in the banking book	Simple risk weight method under the IRB approach.
Credit valuation adjustment (CVA)	The credit valuation adjustment (CVA) is an additional capital charge to the existing counterparty credit risk default charge. Banks are required to hold capital for the risk of mark-to-market losses (i.e., CVA) associated with the deterioration of counterparty credit quality. The model that we use is approved by FINMA. For a subset of our credit portfolio, we apply the standardized approach.
Settlement risk	Capital requirements for failed transactions are determined according to the rules for failed trades and non-delivery-versus-payment transactions under the Basel III framework.
Non-counterparty-related risk	The required capital for non-counterparty-related assets such as our premises, other property, equipment and software, deferred tax assets on temporary differences and defined benefit plans is calculated according to prescribed regulatory risk weights.

Market risk	The regulatory capital requirement is calculated using a variety of methods approved by FINMA. The components are value-at-risk (VaR), stressed VaR (SVaR), an add-on for risks which are potentially not fully modeled in VaR (RniV), the incremental risk charge (IRC), the comprehensive risk measure (CRM) for the correlation portfolio and the securitization framework for securitization positions in the trading book, which is described below. Details on the derivation of RWA for each of these components are provided in the "Risk management and control" section of our Annual Report 2014.
Securitization/re-securitization in the trading book	Securitization/re-securitization in the trading book are assessed for their general market risk as well as for their specific risk. The capital charged for general market risk is determined by the VaR and SVaR methods, whereas the capital charge for specific risk is determined using the CRM method or the ratings-based approach, applying risk weights based on external ratings.
Operational risk	Our model to quantify operational risk meets the regulatory capital standard under the advanced measurement approach and is approved by FINMA. Operational risk RWA also include the incremental operational risk RWA based on the supplemental operational risk capital analysis mutually agreed to by UBS and FINMA.

→ Refer to the "Risk management and control" section of our Annual Report 2014 for more information

Scope of regulatory consolidation

The scope of consolidation for the purpose of calculating Group regulatory capital is generally the same as the consolidation scope under IFRS, and includes subsidiaries directly or indirectly controlled by UBS Group AG that are active in the banking and finance sector. However, subsidiaries consolidated under IFRS that are active in sectors other than banking and finance are excluded from the regulatory scope of consolidation. More information on the IFRS scope of consolidation, as well as the list of significant subsidiaries included in this scope as of 31 December 2014, are available in the "Financial information" section of our Annual Report 2014.

→ Refer to "Note 1 Summary of significant accounting policies" and "Note 30 Interests in subsidiaries and other entities" in the "Financial information" section of our Annual Report 2014 for more information

The main differences in the basis of consolidation between IFRS and regulatory capital purposes relate to the following entities as of 30 June 2015:

- Investments in insurance, real estate and commercial companies as well as investment vehicles which were consolidated under IFRS, but not for regulatory capital purposes, and were subject to risk weighting;
- Joint ventures which were fully consolidated for regulatory capital purposes, but which were accounted for under the equity method under IFRS;
- Entities which have issued preferred securities which were consolidated for regulatory capital purposes but not consolidated under IFRS. These entities hold bonds issued by UBS AG, which are eliminated in the consolidated regulatory capital accounts. These entities do not have material third-party asset balances, and their equity is attributable to non-controlling interests.

The table below provides a list of the most significant entities that were included in the IFRS scope of consolidation, but not in the regulatory capital scope of consolidation. As of 30 June 2015, entities consolidated under IFRS, but not included in the regulatory scope of consolidation, did not report any significant capital deficiencies.

In the banking book, certain equity investments were not required to be consolidated, neither under IFRS nor in the regulatory scope. These investments mainly consisted of infrastructure holdings and joint operations (for example, settlement and clearing institutions, stock and financial futures exchanges) and included our participation in the SIX Group. These investments were risk weighted based on applicable threshold rules.

- → Refer to "Table 18: Equity instruments in the banking book" of this report for more information on the measurement of these instruments
- → Refer to "Table 33: Reconciliation of accounting balance sheet to balance sheet under the regulatory scope of consolidation" of this report for more information
- ➔ Refer to "Note 25 Restricted and transferred financial assets" in the "Financial information" section of our Annual Report 2014 for more information on transferability restrictions under IFRS 12

Overview of Basel III exposures and risk-weighted assets

"Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" and subsequent tables provide a breakdown according to BIS-defined exposure segments as follows:

- Sovereigns, consisting of exposures relating to sovereign states and their central banks, the BIS, the International Monetary Fund, the EU (including the European Central Bank) and eligible multilateral development banks.
- Banks, consisting of exposures to legal entities holding a banking license. This segment also includes securities firms subject to supervisory and regulatory arrangements, including risk-based capital requirements, which are comparable to those applied to banks according to the framework. This segment also includes exposures to public sector entities with tax-raising power or entities whose liabilities are fully guaranteed by a public entity.
- Corporates, consisting of all exposures that do not fit into any of the other exposure segments. This segment includes private commercial entities such as corporations, partnerships or proprietorships, insurance companies and funds (including managed funds).
- Central counterparties (CCP) are clearing houses that interpose themselves between counterparties to contracts traded in one or more financial markets, becoming the buyer to every seller and the seller to every buyer and thereby ensuring the future performance of open contracts. A CCP becomes counterparty to trades with market participants through novation, an open offer system, or another legally binding arrangement.
- Retail, Residential mortgages, consisting of residential mortgages, regardless of exposure size, if the debtor occupies or rents out the mortgaged property.
- Retail, Lombard lending, consisting of loans made against the pledge of eligible marketable securities or cash.
- Retail, Qualifying revolving retail exposures, consisting of unsecured revolving credits that exhibit appropriate loss characteristics

relating to credit card relationships treated under the advanced internal ratings-based (A-IRB) approach.

- *Retail, Other retail,* consisting of exposures to small businesses, private clients and other retail customers without mortgage financing.

Table 2 also shows the gross and net exposure at default (EAD) per risk type and exposure segment, which forms the basis for the calculation of the RWA as well as the capital requirement per exposure category. The Basel III credit risk-related component "Stressed expected positive exposure (sEPE)" is newly included in "Counterparty credit risk by exposure segment" while "Credit valuation adjustment (CVA)" is still disclosed separately in this table. Comparative figures for December 2014 have been restated accordingly.

Gross EAD decreased by CHF 19 billion to CHF 725 billion in the first half of 2015, primarily as a result of lower exposures to sovereigns and non-counterpartyrelated risk. The reduction in non-counterparty-related risk was mainly due to decreases related to defined benefit pension plans and deferred tax assets recognized for tax loss carry-forwards.

Capital requirements presented in the following tables are calculated based on our Swiss SRB Basel III total capital requirement of 12.6% of RWA as of 30 June 2015 and 11.1% of RWA as of 31 December 2014, respectively.

- → Refer to the table "Basel III risk-weighted assets by risk type, exposure and business divisions and Corporate Center units" in the "Capital management" section of our second quarter 2015 report for more information on RWA by business divisions and Corporate Center units
- ➔ Refer to the table "Basel III RWA movement by key driver, risk type and reporting segment" in the "Capital management" section of our Annual Report 2014 for more information on RWA movements

¹ Refer to the "Capital management" section of our Annual Report 2014 for more information on the differences between phase-in and fully applied RWA. ² Calculated based on our Swiss SRB Basel III total capital requirement of 11.1% of RWA. ³ Includes sEPE, most of which relates to exposures to Banks and Corporates. ⁴ Simple risk weight method. ⁵ The EAD of securitization positions retained or purchased in the trading book. ⁶ Incremental RWA reflect the effect of the supplemental operational risk capital analysis mutually agreed by UBS and FINMA.

Credit risk

The tables in this section provide details on the exposures used to determine the firm's credit risk-related regulatory capital requirement. The parameters applied under the A-IRB approach are generally based on the same methodologies, data and systems we use for internal credit risk quantification, except where certain treatments are specified by regulatory requirements. These include, for example, the application of regulatory prescribed floors and multipliers, and differences with respect to eligibility criteria and exposure definitions. The exposure information presented in this section therefore differs from our internal management view disclosed in the "Risk management and control" sections of our quarterly and annual reports. Similarly, the regulatory capital prescribed measure of credit risk exposure also differs from that required under IFRS. The following credit risk-related tables are based on Basel III phase-in requirements and correspond to the counterparty credit risk by exposure segment. Stressed expected positive exposure (sEPE) is newly included in counterparty credit risk and comparative figures for December 2014 have been restated accordingly in the following tables.

→ Refer to the "Risk management and control" section of our Annual Report 2014 for more information

The regulatory gross credit exposure for banking products is equal to the drawn loan amounts represented on the balance

sheet, with the exception of off-balance sheet commitments where the regulatory gross credit exposure is calculated by applying a credit conversion factor to the undrawn amount or contingent claim.

Within traded products, we determine the regulatory credit exposure on the majority of our derivatives portfolio by applying the effective EPE and sEPE as defined in the Basel III framework. However, for a small portion of the portfolio we apply the current exposure method (CEM) based on the replacement value of derivatives in combination with a regulatory prescribed add-on. For the majority of securities financing transactions (securities borrowing/lending and repurchase agreements/reverse repurchase agreements), we determine the regulatory gross credit exposure using the close-out period (COP) approach. The regulatory gross credit exposure for traded products is equal to regulatory net credit exposure in the credit risk tables on the following pages.

The regulatory net credit exposure detailed in the tables on the following pages is shown as the regulatory exposure at default after applying collateral, netting and other eligible risk mitigants permitted by the relevant regulations. The information on impaired and defaulted assets, consistent with the regulatory capital treatment, is presented in the "Impairment, default and credit loss" section of this report.

Table 3: Regulatory gross credit risk by exposure segment and RWA

This table shows the derivation of RWA from the regulatory gross credit exposure including sEPE broken down by major types of credit exposure according to classes of financial instruments.

		Expo	sure		Average regulatory risk weighting	RWA ¹

¹ Includes guarantees and standby letters of credit provided by third parties, mainly banks.

Advanced internal ratings-based approach

UBS uses the advanced internal ratings-based (A-IRB) approach for calculating certain credit risk exposures. Under the A-IRB approach, the required capital for credit risk is quantified through empirical models that we have developed to estimate the probability of default (PD), loss given default (LGD), exposure at default (EAD) and other parameters, subject to FINMA approval.

→ Refer to the "Risk management and control" section of our

Annual Report 2014 for more information

Tables 9a to 9g provide a breakdown of the regulatory net credit exposure, weighted average PD, LGD, RWA and the average risk weight under the A-IRB approach by internal UBS ratings across BIS-defined exposure segments.

In line with the numbers presented in table 2, impaired and defaulted assets and sEPE are now included in tables 9a through 9g. Comparative figures for December 2014 have been restated accordingly.

#### Standardized approach

The standardized approach is generally applied where it is not possible to use the A-IRB approach. The standardized approach requires banks to use risk assessments prepared by external credit assessment institutions (ECAI) or export credit agencies to determine the risk weightings applied to rated counterparties. We use FINMA-recognized ECAI risk assessments to determine the risk weight for certain counterparties according to the BIS-defined exposure segments.

We use three FINMA-recognized ECAI for this purpose: Standard & Poor's Ratings Group, Moody's Investors Service and Fitch Ratings. The mapping of external ratings to the standardized approach risk weights is determined by FINMA and published on its website.

#### Table 10a: Regulatory gross and net credit exposure by risk weight under the standardized approach

This table provides a breakdown of the regulatory gross and net credit exposure by risk weight according to BIS-defined exposure segments for those credit exposures for which we apply the standardized approach.

CHF million			Total expo	sure		Total exposure

¹ Reflects credit losses recognized in our IFRS income statement, including recoveries. Comparative figures for 31 December 2014 have been restated accordingly.² Includes changes in collective loan loss allowances.

#### **Derivatives credit risk**

#### Table 16: Credit exposure of derivative instruments

This table provides an overview of our credit exposures arising from derivatives. Exposures are provided based on the balance sheet carrying values of derivatives as well as regulatory net credit exposures. The net balance sheet credit exposure differs from the regulatory net credit exposures because of differences in valuation methods, netting and collateral deductions used for accounting and regulatory capital purposes. Net current credit exposure is derived from gross positive replacement values which reflect the balance sheet carrying values of derivatives after netting and eligible financial collateral, where an enforceable master netting agreement is in place. Regulatory net credit exposure is calculated using our internal models or the supervisory approach.

→ Refer to "Note 14 Derivative instruments and hedge accounting" in the "Financial information" section of our Annual Report 2014 for more information on derivative instruments

CHF million	30.6.15	31.12.14
Gross positive replacement values	173,681	256,978
Netting benefits recognized ¹	(127,026)	(198,744)
Collateral held ¹	(25,159)	(30,794)
of which: cash collateral	(21,416)	(25,128)
of which: non-cash collateral	(3,743)	(5,666)
Net current credit exposure	21,496	27,439
Regulatory net credit exposure (total counterparty credit risk)	76,187	82,961
of which: based on internal models (effective EPE)	59,125	68,917
of which: based on supervisory approaches (current exposure method)	17,062	14,044

¹ For the purpose of this disclosure, the amounts of financial instruments and cash collateral not set off in the balance sheet have been capped by relevant netting agreements so as not to exceed the net amount of financial assets presented on the balance sheet; i.e., over-collateralization, where it exists, is not reflected in the table.

#### Other credit risk information

Our credit derivatives trading is predominantly conducted on a collateralized basis. This means that our mark-tomarket exposures arising from derivatives activities with collateralized counterparties are typically closed out in full or reduced to nominal levels on a regular basis by the use of collateral.

Derivatives trading with counterparties with high credit ratings is typically conducted under an International Swaps and Derivatives Association (ISDA) master netting agreement. Credit exposures to those counterparties from credit default swaps (CDS), together with exposures from other over-the-counter (OTC) derivatives, are netted and included in the calculation of the collateral that is required to be posted. Trading with lower-rated counterparties, such as hedge funds, would generally require an initial margin to be posted by the counterparty.

We receive collateral from or post collateral to our counterparties based on our open net receivable or net payable from OTC derivative activities. Under the terms of the ISDA master netting agreement and similar agreements, this collateral, which generally takes the form of cash or highly liquid debt securities, is available to cover any amounts due under those derivative transactions.

#### **Table 17: Credit derivatives**

This table provides an overview of the notional amount of credit derivatives, including those used to manage risks within our banking and trading books. Notional amounts of credit derivatives do not include any netting benefits. For capital underpinning of the counterparty credit risk of derivative positions, the effective EPE or exposure according to current exposure method is applied. Notional amounts are reported based on the regulatory scope of consolidation.

	Regi	Regulatory banking book			Regulatory trading book			Total	
Notional amounts,	Protection			Protection					
CHF million	bought	Protection sold	Total	bought	Protection sold	Total	30.6.15	31.12.14	
Credit default swaps	11,784	786	12,570	159,388	155,386	314,775	327,345	483,875	
Total rate of return swaps	232		232	4,370	4,724	9,094	9,326	8,899	
Options and warrants				4,277	52	4,330	4,330	8,028	
Total 30.6.15	12,017	786	12,803	168,036	160,162	328,198	341,001		
Total 31.12.14	13,970	751	14,722	248,849	237,231	486,080		500,802	

Measured on a notional basis, our counterparties for buying and selling protection are mainly banks and, to a lesser extent, broker-dealers and central counterparties. In the first half of 2015, we saw a material reduction in notional exposures of CDS in the regulatory trading book, primarily with banks. → Refer to "Note 14 Derivative instruments and hedge accounting" in the "Financial information" section of our Annual Report 2014 for more information on credit derivatives by instrument and counterparty

# Equity instruments in the banking book

The regulatory capital view for equity instruments in the banking book differs from the IFRS view, primarily due to the following:

- Differences in the basis of valuation, for example financial investments available-for-sale are subject to fair value accounting under IFRS but for regulatory capital purposes have the "lower of cost or market" or "cost less impairment" concept applied.
- Certain instruments which are held as debt investments on the IFRS balance sheet, mainly investment fund units, are treated as equity instruments for regulatory capital purposes.
- Certain instruments which are held as trading portfolio assets on the IFRS balance sheet, but which are not part of the regulatory VaR framework, are included as equity instruments in the banking book for regulatory capital purposes.
- Differences in the scope of consolidation. → Refer to the "Scope of regulatory consolidation" section of
- → Refer to the "Scope of regulatory consolidation" section of this report for more information

#### Table 18: Equity instruments in the banking book

The table below shows the different equity instruments categories held in the banking book with their amounts as recognized under IFRS, followed by the regulatory capital adjustment amount. This adjustment considers the abovementioned differences to IFRS resulting in the total regulatory equity instruments

exposure under the BIS framework, the corresponding RWA and the capital charge.

The table also shows net realized gains and losses and unrealized revaluation gains relating to equity instruments.

	As of	
CHF million	30.6.15	31.12.14

Unrealized revaluation gains	220	285
of which: included in tier 2 capital	99	128

¹ Includes CHF 474 million of investment fund units treated as debt investments under IFRS as of 30 June 2015. ² Total equity instruments under regulatory capital of CHF 2,092 million, as of 30 June 2015, excluding CHF 408 million booked in trust entities (compensation and benefit vehicles) and CHF 352 million goodwill of investments in associates, i.e., CHF 1,331 million net EAD is also disclosed in the "Equity instruments in the banking book" line of "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets. ³ Includes CHF 408 million exposure booked in trust entites (compensation and benefit vehicles) that did not generate risk-weighted assets. ⁴ Under the Basel III framework, goodwill of investments in associates is deducted from common equity tier 1 capital. ⁵ The risk-weighted assets of CHF 4,326 million and the capital requirement of CHF 546 million, as of 30 June 2015, are also disclosed in the "Equity instruments in the banking book" line of "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets. ⁴ Under the Basel III framework, goodwill of investments in associates is deducted from common equity tier 1 capital. ⁵ The risk-weighted assets of CHF 4,326 million and the capital requirement of CHF 546 million, as of 30 June 2015, are also disclosed in the "Equity instruments in the banking book" line of "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets."

# Market risk

The "Risk management and control" section of our quarterly and annual reports provides comprehensive information on market risk-related Pillar 3 disclosures.

#### → Refer to "Market risk" in the "Risk management and control" section of our Annual Report 2014, as well as our first and second guarter 2015 reports for more information

#### **Backtesting of VaR**

For backtesting purposes, we compute backtesting VaR using a 99% confidence level and one-day holding period for the population included within regulatory VaR. The backtesting compares backtesting process VaR calculated on positions at the close of each business day with the revenues generated by those positions on the following business day. Backtesting revenues exclude non-trading revenues, such as fees and commissions and revenues from intraday trading, to ensure a like-forlike comparison. A backtesting exception occurs when backtesting revenues are negative and the absolute value of those revenues is greater than the previous day's backtesting VaR.

We did not have any Group downside backtesting exceptions in the first six months of 2015. There were two downside

backtesting exceptions in the 12 months preceding the end of June 2015. The chart "Group: development of backtesting revenues against backtesting VaR" shows the development of backtest VaR against backtesting revenues of the Group for the first six months of 2015. The chart shows both the negative and positive tails of the backtest VaR distribution at 99% confidence intervals representing, respectively, the losses and gains that could potentially be realized over a one-day period at that level of confidence. The positive backtesting revenue in the chart in January 2015 resulted from the significant market volatility following the Swiss National Bank's decision to discontinue the minimum targeted exchange rate for the Swiss franc versus the euro. Extreme market moves, particularly in foreign exchange markets, were observed far outside of the 99th percentile of the historical VaR time series.

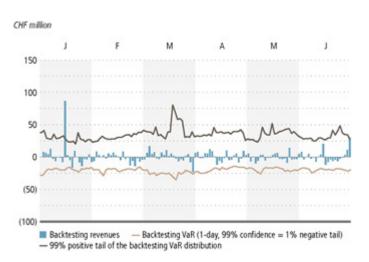

The histogram "Investment Bank and Corporate Center – Non-core and Legacy Portfolio daily revenue distribution" shows the daily revenue distribution for the Investment Bank and Corporate Center – Non-core and Legacy Portfolio for the first six months of 2015. This includes, in addition to backtesting revenues, revenues such as commissions and fees, revenues from intraday trading and own credit.

#### Table 19: Group: backtesting regulatory value-at-risk (1-day, 99% confidence, 5 years of historical data)

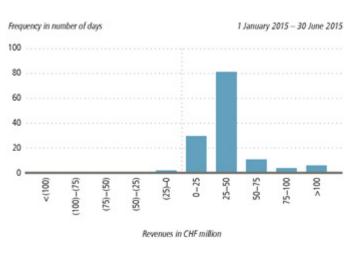

This table shows the Group's minimum, maximum, average and period-end regulatory backtesting VaR.

	For	the six mo	onths ended	30.6.15	I	or the ye	ar ended 31.	12.14
CHF million	Min.	Max.	Average	30.6.15	Min.	Max.	Average	31.12.14
Group	14	35	20	20	15	38	22	20

#### Chart 1: Group: development of backtesting revenues¹ Chart 2: Investment Bank and Corporate Center – Nonagainst backtesting Var² (1-day, 99% confidence)

### core and Legacy Portfolio daily revenue distribution¹

¹ In addition to backtesting revenues, includes revenues such as commissions and fees, revenues from intraday trading, and own credit.

¹ Excludes non-trading revenues, such as commissions and fees, and ² Based on Basel III regulatory VaR, excludes CVA positions and their eligible

hedges which are subject to the new standalone CVA charge.

30

# Securitization

This section provides details of traditional and synthetic securitization exposures in the banking and trading book based on the Basel III framework. Securitized exposures are risk weighted, generally, based on their external ratings. This section also provides details of the regulatory capital requirement associated with these exposures.

In a traditional securitization, a pool of loans (or other debt obligations) is typically transferred to structured entities that have been established to own the loan pool and to issue tranched securities to third-party investors referencing this pool of loans. In a synthetic securitization, legal ownership of securitized pools of assets is typically retained, but associated credit risk is transferred to structured entities typically through guarantees, credit derivatives or credit-linked notes. Hybrid structures with a mix of traditional and synthetic features are disclosed as synthetic securitizations.

We act in different roles in securitization transactions. As originator, we create or purchase financial assets, which are then securitized in traditional or synthetic securitization transactions, enabling us to transfer significant risk to third-party investors. As sponsor, we manage, provide financing or advise securitization programs. In line with the Basel III framework, sponsoring includes underwriting, that is, placing securities in the market. In all other cases, we act in the role of investor by taking securitization positions.

RWA attributable to securitization positions decreased to CHF 2.2 billion as of 30 June 2015 from CHF 3.9 billion as of 31 December 2014, mainly due to a decline of CHF 1.5 billion in Corporate Center – Non-core and Legacy Portfolio, predominantly from the sale of bond positions held as hedges against derivative exposures, as well as the sale of collateralized loan obligation bond positions.

- → Refer to "Note 30 Interests in subsidiaries and other entities" in the "Financial information" section of our Annual Report 2014 for more information on structured entities
- → Refer to "Corporate Center Non-core and Legacy Portfolio" in the "Risk management and control" section of our Annual Report 2014 for more information on RWA by portfolio composition and exposure category

#### Table 20: Securitization/re-securitization

		30.6		31.12.14

Other business divisions ¹	474	474	229	29	405	405	268	30

¹ Mainly reflecting exposures in the Investment Bank.

#### **Objectives, roles and involvement**

#### Securitization in the banking book

Securitization positions held in the banking book include tranches of synthetic securitization of loan exposures and over-the-counter derivatives. These were primarily hedging transactions executed in 2014, 2013 and 2012 by synthetically transferring counterparty credit risk. In addition, securitization in the banking book includes legacy risk positions in Corporate Center – Non Core and Legacy portfolio. As of 30 June 2015, this portfolio consisted primarily of CDS positions referencing assetbacked securities (ABS) assets with related cash and synthetic hedges to mitigate the impact of directional movements.

In the first half of 2015, we acted in the roles of both originator and sponsor. As originator, we sold originated commercial mortgage loans into securitization programs. As sponsor, we managed or advised securitization programs and helped to place the securities in the market. Refer to "Table 21: Securitization activity for the period in the banking book" for an overview of our originating and sponsoring activities in the first half of 2015 and in full year 2014, respectively.

Securitization and re-securitization positions in the banking book are measured either at fair value or at amortized cost less impairment. The impairment assessment for a securitized position is generally based on the net present value of future cash flows expected from the underlying pool of assets.

#### Securitization in the trading book

Securitizations (including correlation products) held in the trading book are part of the trading activities, which typically include market-making and client facilitation. Included in the trading book are positions in our correlation book and legacy positions in leveraged super senior tranches. In the trading book, securitization and resecuritization positions are measured at fair value reflecting market prices where available or are based on our internal pricing models.

#### Type of structured entities and affiliated entities involved in the securitization transactions

For the securitization of third-party exposures, the type of structured entities employed is selected as appropriate based on the type of transaction undertaken. Examples include limited liability corporations, common law trusts and depositor entities.

We manage or advise significant groups of affiliated entities that invest in exposures we have securitized or in structured entities that we sponsor. Significant groups of affiliated entities include North Street, Brooklands/ELM, and East Street, which are involved in the US, European and Asia Pacific reference-linked note programs, respectively.

- → Refer to "Note 30 Interests in subsidiaries and other entities" in the "Financial information" section of our Annual Report 2014 for more information on structured entities
- → Refer to the "Corporate Center" section of our second quarter 2015 report for more information on RWA by portfolio composition and exposure category

### Managing and monitoring of the credit and market risk of securitization positions

The banking book securitization and re-securitization portfolio is subject to specific risk monitoring, which may include interest rate and credit spread sensitivity analysis, as well as inclusion in firm-wide earnings-at-risk, capitalat-risk and combined stress test metrics.

The trading book securitization and re-securitization positions are also subject to multiple risk limits in our Investment Bank, such as management VaR and stress limits as well as market value limits. As part of managing risks within pre-defined risk limits, traders may utilize hedging and risk mitigation strategies. Hedging may, however, expose the firm to basis risks as the hedging instrument and the position being hedged may not always move in parallel. Such basis risks are managed within the overall limits. Any retained securitization from origination activities and any purchased securitization positions are governed by risk limits together with any other trading positions. Legacy trading book securitization exposure is subject to the same management VaR limit framework. Additionally, risk limits are used to control the unwind, novation and asset sales process on an ongoing basis.

#### Regulatory capital treatment of securitization structures

Generally, in both the banking and trading book we apply the ratings-based approach to securitization positions using ratings, if available, from Standard & Poor's Ratings Group, Moody's Investors Service and Fitch Ratings for all securitization and re-securitization exposures. The selection of the External Credit Assessment Institutions (ECAI) is based on the primary rating agency concept. This concept is applied, in principle, to avoid that the credit assessment by one ECAI is applied for one or more tranches and another ECAI for the other tranches unless this is the result of the application of the specific rules for multiple assessments. If any two of the abovementioned rating agencies have issued a rating for a particular position, we would apply the lower credit rating of the two. If all three rating agencies have issued a rating for a particular position, we would

apply the middle credit rating of the three. Under the ratings-based approach, the amount of capital required for securitization and re-securitization exposures in the banking book is capped at the level of the capital requirement that would have been assessed against the underlying assets had they not been securitized. This treatment has been applied in particular to the US and European reference-linked note programs. For the purposes of determining regulatory capital and the Pillar 3 disclosure for these positions, the underlying exposures are reported under the standardized approach, the advanced internal ratings-based approach or the securitization approach, depending on the category of the underlying security. If the underlying security is reported under the standardized approach or the advanced internal ratings-based approach, the related positions are excluded from the tables on the following pages.

The supervisory formula approach is applied to synthetic securitizations of portfolios of counterparty credit risk inherent in derivatives and loan exposures for which an external rating was not sought. The supervisory formula approach is also applied to leveraged super senior tranches.

In the trading book, the comprehensive risk measure is used for the correlation portfolio as defined by Basel III requirements. This measure broadly covers securitizations of liquid corporate underlying assets as well as associated hedges that are not necessarily securitizations, for example, single-name credit default swaps and credit default swaps on indices.

We do not apply the concentration ratio approach or the internal assessment approach to securitization positions.

The counterparty risk of interest rate or foreign currency derivatives with securitization vehicles is treated under the advanced internal ratings-based approach and is therefore not part of this disclosure.

#### Accounting policies

Refer to "Note 1 Summary of significant accounting policies" in the "Financial information" section of our Annual Report 2014 for information on accounting policies that relate to securitization activities, primarily "Note 1a item 3 Subsidiaries and structured entities" and "Note 1a item 12 Securitization structures set up by UBS."

We disclose our intention to securitize exposures as an originator, if assets are designated for securitization and a tentative pricing date for a transaction is known as of the balance sheet date or if a pricing of a transaction has been fixed. Exposures intended to be securitized continue to be valued in the same way until such time as the securitization transaction takes place.

#### Presentation principles

It is our policy to present Pillar 3 disclosures for securitization transactions and balances in line with the capital adequacy treatments which were applied under Pillar 1 in the respective period presented.

We do not amend comparative prior period numbers for presentational changes triggered by new and revised information from third-party data providers, as long as the updated information does not impact the Pillar 1 treatments of prior periods.

#### Good practice guidelines

On 18 December 2008, the European Banking Federation, the Association for Financial Markets in Europe, the European Savings Banks Group and the European Association of Public Banks and Funding Agencies published the "Industry good practice guidelines on Pillar 3 disclosure requirement for securitization." These guidelines were slightly revised in 2009 and 2010, and were incorporated in this report.

### Securitization exposures in the banking and trading book

Table 21 outlines the exposures measured as the transaction size we securitized at inception in the banking book in the first half of 2015 and in full year 2014. The activity is further broken down by our role (originator/sponsor) and by type (traditional/synthetic).

Amounts disclosed under the Traditional column of this table reflect the total outstanding notes at par value issued by the securitization vehicle at issuance. For synthetic securitization transactions, the amounts disclosed generally reflect the balance sheet carrying values of the securitized exposures at issuance.

For securitization transactions where we acted as originator, exposures are split into two parts: those in which we have retained securitization positions and/or continue to be involved on an ongoing basis (for example credit enhancement or implicit support), and those in which we do not have retained securitization positions and/or have no further involvement.

Where we acted as both originator and sponsor to a securitization, originated assets are reported under Originator and the total amount of the underlying assets securitized is reported under Sponsor. As a result, as of 30 June 2015 and 31 December 2014, amounts of CHF 0.6 billion and CHF 2.9 billion, respectively, were included in "Table 21: Securitization activity for the period in the banking book" and "Table 22: Outstanding securitized exposures" under both Originator and Sponsor.

### Securitization activity for the period in the trading book

In the first half of 2015 and in full year 2014, we had no securitization activity in the trading book.

34

This table outlines the outstanding transaction size of securitization exposures which we have originated/sponsored and retained securitization positions at the balance sheet date in the banking or trading book and/or are otherwise involved on an ongoing basis, for example through the provision of credit enhancement or implicit support.

Amounts disclosed under the Traditional column in this table reflect the total outstanding notes at par value issued by the securitization vehicle. For synthetic securitization transactions, we generally disclose the balance sheet carrying values of the exposures securitized or, for hybrid structures, the outstanding notes at par value issued by the securitization vehicle.

The table also includes securitization activities conducted in the first half of 2015 and in full year 2014 in which we retained/purchased positions. These can also be found in "Table 21: Securitization activity for the period in the banking book." Where no positions were retained, the outstanding transaction size is only disclosed in the year of inception for originator transactions.

All values in this table are as of the balance sheet date.

¹ In line with our disclosure principles, we disclose the UBS originated and sponsored deals only where the positions result in an RWA or capital deduction under Pillar 1. ² This disclosure excludes sponsor-only activity where we do not retain a position. In such cases, we advised the originator or placed securities in the market for a fee, and this activity did not otherwise impact our capital.

### Table 23: Impaired or past due securitized exposures and losses related to securitized exposures in the banking book

This table provides a breakdown of the outstanding impaired or past due exposures at the balance sheet date as well as losses recognized in our income statement for transactions in which we acted as originator or sponsor in the banking book. Losses are reported after taking into account the offsetting effects of any credit protection from eligible risk mitigation instruments under the Basel III framework for the retained or purchased positions. Where we did not retain positions, impaired or past due information is only reported in the year of inception of a transaction. Where available, past due information is derived from investor reports. Past due is generally defined as delinquency above 60 days. Where investor reports do not provide this information, alternative methods have been applied, which may include an assessment of the fair value of the retained position or reference assets, or identification of any credit events.

¹ Synthetic long exposures through sold CDS positions are classified as off balance sheet exposures. ² "Other" primarily includes securitization of portfolios of counterparty credit risk in over-the-counter (OTC) derivatives and loan exposures. ³ The total exposure of CHF 5,125 million as of 30 June 2015 is also disclosed in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets" in line "Securitization/re-securitization in the banking book."

#### Table 26: Securitization positions retained or purchased in the trading book

This table provides a breakdown of securitization positions we purchased or retained in the trading book subject to the securitization framework for specific market risk, irrespective of our role in the securitization transaction. Gross long and gross short amounts reflect the positions prior to the eligible offsetting of cash and derivative positions. Net long and net short amounts are the result of offsetting cash and derivative positions to the extent eligible under the Basel III framework. The amounts disclosed are either the fair value or, in the case of derivative positions, the aggregate of the notional amount and the associated replacement value at the balance sheet date.

¹ Since 1 January 2014, both net long and net short positions are underpinned in the trading book and EAD capped at maximum possible loss. ² 30 June 2015 does not include CHF 1,147 million related to leveraged super senior tranches treated under the supervisory formula approach which are reported in "Table 31c: Securitization/re-securitization exposures treated under the supervisory formula approach by rating clusters-trading book." Including these exposures, net total exposures were CHF 1,668 million, which equals the gross and net exposure of securitization/re-securitization in the trading book disclosed in "Table 2: Detailed segmentation of Basel III exposures and risk-weighted assets."

## Table 27a: Capital requirement for securitization/re-securitization positions retained or purchased in the banking book

Tables 27a to 27c provide the capital requirements for securitization and re-securitization positions we purchased or retained in the banking book, irrespective of our role in the securitization transaction, split by risk weight bands and regulatory capital approach.

We use three FINMA-recognized ECAI for this purpose: Standard & Poor's Ratings Group, Moody's Investors Service and Fitch Ratings.

#### Gains on sale – securitization exposures to be deducted from Basel III tier 1 capital

In the first half of 2015 and in full year 2014, we have not retained any significant exposures relating to securitization for which we have recorded gains on sale requiring deduction from Basel III tier 1 capital.

#### Securitization exposures subject to early amortization in the banking and trading book

In the first half of 2015 and in full year 2014, we had no securitization structures in the banking and trading book that are subject to early amortization treatment.

#### Table 28: Re-securitization positions retained or purchased in the banking book

The table below shows the total of re-securitization positions (cash as well as synthetic) held in the banking book, broken down into positions for which credit risk mitigation has been recognized and those for which no credit risk mitigation has been recognized. Credit risk mitigation includes protection bought by entering into credit derivatives with third-party protection sellers, as well as financial collateral received. Both bought credit protection and financial collateral must be eligible under the Basel III framework. In the first half of 2015 and in full year 2014, no credit risk mitigation has been recognized for re-securitization positions (cash as well as synthetic) held in the banking book. As of 30 June 2015, none of the retained or purchased banking book resecuritization positions had an integrated insurance wrapper.

CHF million	With credit risk mitigation	Without credit risk mitigation	Total
Total 30.6.15	0	12	12
Total 31.12.14	0	492	492

#### Table 29: Re-securitization positions retained or purchased in the trading book

The table below outlines re-securitization positions retained or purchased subject to the securitization framework for specific market risk held in the trading book on a gross long and gross short basis, including synthetic long and short positions resulting from derivative transactions. It also includes positions on a net long and net short basis, that is, gross long and short positions after offsetting to the extent it is eligible under the Basel III framework. As of 30 June 2015, none of the retained or purchased trading book re-securitization positions had an integrated insurance wrapper.

CHF million	Gross long	Gross short	Net long	Net short
Total 30.6.15	102	24	14	1
Total 31.12.14	134	41	15	4

### Outstanding notes issued by securitization vehicles related to UBS's retained exposures subject to the market risk approach

The information presented in table 26 in our Annual Report 2014 is now located within the "Trading Book" information in "Table 22: Outstanding securitized exposures" in this report.

In the first half of 2015 and in full year 2014, there was no origination activity for securitization vehicles in the trading book.

### Table 30: Correlation products subject to the comprehensive risk measure or the securitization framework for specific risk

This table outlines products in the correlation portfolio that we retained or purchased in the trading book, irrespective of our role in the securitization transaction. They are subject to either the comprehensive risk measure or the securitization framework for specific risk. Correlation products subject to the securitization framework are leveraged super senior positions. The values disclosed are market values for cash positions, replacement values and notional values for derivative positions. Derivatives are split by positive replacement value and negative replacement value. The decrease in notional values related to positive and negative replacement values resulted mainly from trades maturing during the year, as well as from trade terminations.

	Cash positions		Derivative positions

#### Table 32: Capital requirement for securitization positions related to correlation products

This table outlines the capital requirement for securitization positions in the trading book for correlation products, including positions subject to comprehensive risk measure and positions related to leveraged super senior positions and certain re-securitized corporate credit exposures positions subject to the securitization framework. Our model does not distinguish between "default risk," "migration risk" and "correlation risk." The capital requirement for positions subject to the comprehensive risk measure declined due to the execution of a series of risk transfers to exit the majority of the correlation trading portfolio market risk.

ions subject to comprehensive risk measure ions subject to securitization framework ¹	Capital	requirement
CHF million	30.6.15	31.12.14
Positions subject to comprehensive risk measure	13	15
Positions subject to securitization framework ¹	29	24

¹ References link respective lines of this table to the respective reference numbers provided in the column "References" in "Table 34: Composition of capital." ² Represents IFRS book value. ³ IFRS book value is CHF 9,625 million. ⁴ IFRS book value is CHF 3,754 million. ⁵ IFRS book value is CHF 977 million. Refer to the "Compensation" section of our Annual Report 2014 for more information on DCCP. 6 IFRS value is CHF 1,589 million, excluding non-controlling interests in UBS AG.

# Composition of capital

#### Table 34: Composition of capital

The table below provides the "Composition of capital" as defined by BIS and FINMA. The naming convention does not always reflect UBS's naming convention used in our external reports. Reference is made to items reconciling to the balance sheet under the regulatory scope of consolidation as disclosed in "Table 33: Reconciliation of accounting balance sheet to balance sheet under the regulatory scope of consolidation." Where relevant, the effect of phase-in arrangements is disclosed as well.

→ Refer to the "Capital management" section of our second quarter 2015 report for more information on phase-in arrangements An overview of the main features of our regulatory capital instruments, as well as the full terms and conditions, are published in the "Bondholder information" section of our Investor Relations website.

→ Refer to "Bondholder information" at www.ubs.com/investors for more information on the capital instruments of UBS Group AG and UBS AG on a consolidated and on a standalone basis

		Phase-in amounts	Effect of the transition phase	References ¹
