Corporate responsibility

Our firm’s commitment to corporate responsibility demands careful management of our relationships with our stakeholders. Our engagement with them makes a critical contribution to our understanding and management of topics relevant to our firm and to advancing our corporate responsibility strategy. In 2012, we directed our efforts at key societal topics, met key corporate responsibility objectives and delivered on our external corporate responsibility commitments to the benefit of our firm and its stakeholders.

The successful delivery of our corporate responsibility commitments and activities is founded on the firm conviction that, above all, our firm must conduct its business in a sustainable way. We have made good on this belief over the course of our 150-year history and have demonstrated resilience in the face of the many political, economic and regulatory changes and challenges that came to pass during this period. As shown in detail elsewhere in this report, 2012 was a milestone year for UBS in more ways than one. Historically, we celebrated the firm’s 150th anniversary together with clients and others around the globe. We continued to successfully execute our plans to improve our already strong capital position and reduce risk-weighted assets and costs. In October, from this position of strength, we announced a significant acceleration in the implementation of our strategy that will define the future of UBS.

We aim to conduct our business in a sustainable way by complying with all our policies, guidelines and procedures relating to appropriate and responsible corporate behavior. Our definition of corporate responsibility encompasses the legal, ethical and social responsibilities that we as a company and as employees have towards our stakeholders. These responsibilities are reflected in our Code of Business Conduct and Ethics.

By adhering to this code, we demonstrate our commitment to being a responsible corporate institution and acting with integrity in all our interactions with our stakeholders. Proper implementation of the Code of Business Conduct and Ethics contributes to the wider societal goal of sustainable development. Policies and guidelines as well as associated objectives related to this aspiration are guided and supervised at the highest level of our firm. We demonstrate accountability for our corporate responsibility commitments and activities at both Board of Directors (BoD) and Group Executive Board (GEB) level.

Communications, training and awareness raising
Key corporate responsibility developments in 2012

In 2012, we continued to support our clients in understanding key societal opportunities and challenges and acted as a trusted financial advisor on sustainability issues. We did so by expanding our comprehensive range of sustainability products and services, including impact investing, sustainable real estate funds, socially responsible investment products and advisory on sustainability challenges.

We have established a leading position in values-based investing and providing environmental, social and governance (ESG) research. In 2012, we demonstrated this, for example, through the global roll-out of our Investment Bank’s ESG Analyzer and through the honors we received in the annual Thomson Reuters Extel/UKSIF Socially Responsible Investing & Sustainability survey. Our firm’s efforts also received external recognition in the S&P Carbon Disclosure Project report.

We apply a robust framework to manage environmental and social risk in our businesses. In 2012, we continued to strengthen the implementation of key policies and standards, including our Position on Controversial Activities, supported by a sustained roll-out of training and awareness-raising activities for client-facing staff. In doing so, we were able to draw from an industry-leading environmental and social risk screening process, which we established through a successful collaboration between our risk and compliance functions in 2011.

Our compliance function is a significant contributor to ensuring that our corporate responsibility commitments are met and plays a key role in protecting our firm from reputational, business or financial damage. At the same time, it makes a valuable and significant contribution to the fight against financial crime, in particular by deploying our global sanctions, anti-money laundering and anti-bribery programs to deny rogue states, suspected criminals and terrorists access to the financial system via UBS or its products and services. A comprehensive legal and compliance risk assessment in 2011 did not identify any significant incidents of non-compliance with our anti-corruption policy and other regulations related to anti-corruption. Nonetheless, in 2012 an anti-corruption initiative was put in place to strengthen our defenses against corruption involving the firm.

Our environmental and social risk management and our global sanctions, anti-money laundering and anti-bribery programs are important examples of the need for effective outreach and internal collaboration between our business divisions and external collaboration with our stakeholder community. In 2012, we once again demonstrated our commitment to engaging with various initiatives and partners to develop and, where appropriate, enhance our standards. We joined the Roundtable on Sustainable Palm Oil as part of its “Banks & Investors” membership category. We also joined other organizations focused on topics of major relevance to society, including the European Venture Philanthropy Association and the World Demographic & Ageing Forum. We are among the thought leaders in corporate responsibility in banking and participate actively in key international corporate responsibility initiatives. These include the Wolfsberg Group (on anti-money laundering), the UN Principles for Responsible Investment (on responsible investing), the UN Global Compact and the UN Environment Program (UNEP) Finance Initiative.

Our long-standing involvement in the UNEP Finance Initiative reflects our commitment to managing our environmental footprint. Our worldwide environmental management system covers in-house operations, risk management and products and services. In 2012, UBS successfully passed its ISO 14001 surveillance audit. We accomplished our Group-wide CO₂ emission reduction target of 40% below 2004 levels, as originally decided by the GEB in February 2006. In addition, we renewed our climate change strategy and are determined to prepare our clients for success in an increasingly carbon-constrained world.

Our well-established and vigorous community investment program formed an integral part of our firm’s 150th anniversary celebrations. UBS Community Affairs teams around the world implemented an Employee Recognition Award, recognizing 150 UBS employees or teams of employees for their outstanding community involvement. In Switzerland, we launched a major education initiative, consisting of six sub-projects centering on the UBS International Center of Economics in Society at the University of Zurich. This initiative will benefit the entire Swiss population notably by providing support to projects aimed at apprentices, young entrepreneurs, start-up companies and employees of all age groups.

Corporate responsibility governance

The BoD is responsible for formulating our firm’s values and standards and ensuring we meet our obligations to our stakeholders. Both the Chairman of the BoD and the Group Chief Executive Officer (Group CEO) play a key role in safeguarding our reputation and ensuring we communicate effectively with all our stakeholders.

All BoD committees are focused on achieving our goal of creating sustainable value. Of the five BoD committees, the Corporate Responsibility Committee shoulders the main undertaking for corporate responsibility. As set out in the committee’s charter, the Corporate Responsibility Committee actively reviews and assesses how we meet the existing and evolving corporate responsibility expectations of our stakeholders. It also monitors and reviews our corporate responsibility policies and regulations, as well as the implementation of our corporate responsibility activities and commitments. Moreover, it regularly reviews the Code of Business Conduct and Ethics. In 2012, an external review of this code, undertaken at the behest of the BoD, praised the high quality of the document. The reviewers proposed various minor modifications which were subsequently implemented and a revised version of the Code of Business Conduct and Ethics was published.

➔ Refer to www.ubs.com/code for a copy of the UBS Code of Business Conduct and Ethics
➔ Refer to the Organization Regulations of UBS for the Charter of the Corporate Responsibility Committee

In 2012, the Corporate Responsibility Committee continued to be chaired by Wolfgang Mayrhuber. The committee has four additional members, including the Chairman of the BoD, and is advised by a panel of ten members mainly from the GEB, including the Group CEO and all regional CEOs. The members of the advisory panel participate in Corporate Responsibility Committee meetings and are responsible for implementing its recommendations. The advisory panel benefits from direct connections to operational corporate responsibility activities such as anti-money laundering (through the membership of the Group General Counsel) and environmental & social risk management (through the membership of the Group Chief Risk Officer, who also holds the role of Group Environmental Representative).

The GEB is responsible for the development and implementation of our Group and business division strategies, including those pertaining to corporate responsibility. At, or directly below, GEB level there are various committees or boards concerned with tasks and activities relating to particular aspects of corporate responsibility, including the Global Environmental & Social Risk Committee chaired by the Group Chief Risk Officer. Additionally, our Environmental & Human Rights Committee oversees the operational execution of UBS’s Environmental Policy and Statement on Human Rights.

➔ Refer to www.ubs.com/environment for more information on our environmental and human rights governance

The GEB monitors our efforts to combat money laundering, corruption and terrorist financing. These efforts are led by the Head of Global AML (anti-money laundering) Compliance and supported by a network of expert global business teams. The GEB also monitors the implementation of our diversity and inclusion-related strategies and plans for each business division. Our global diversity and inclusion team supports senior management and Human Resources business partners in developing these plans. Our global head of Human Resources is also a member of the Corporate Responsibility Committee’s advisory panel.

➔ Refer to the “Our employees” section of this report for more information on labor standards and diversity programs

The Global Community Affairs Steering Committee is chaired by the Group CEO and composed of several members of our senior management. This GEB-level committee sets the overall strategic direction and aims of our community affairs. In addition, it is ultimately responsible for determining our response to worldwide disasters.

➔ Refer to the discussion on community investment below for more information on our charitable and related activities

Corporate Center
Our commitment to responsible banking requires us to undertake regular and critical assessments of our policies and practices. This in turn requires the careful consideration and assessment of societal issues of potential relevance to UBS. With committees focused on corporate responsibility topics and issues both at BoD and GEB level, we demonstrate that we have firmly established responsibility for the oversight of this important and complex task at the highest level of the firm.

External commitments and initiatives
We are committed to engaging in external corporate responsibility initiatives. These support us in our efforts to advance in areas that are already mandated by government and regulators as well as in areas that, while still largely voluntary, are nonetheless of significance to strengthening our corporate responsibility agenda. In 2012, UBS joined the Roundtable on Sustainable Palm Oil (RSPO), thereby reinforcing our commitment to responsible palm oil production. As part of the RSPO’s “Banks & Investors” membership category, UBS actively promotes RSPO in its business relationships in the palm oil sector, for example by requiring that our clients are members in good standing of the RSPO and by actively seeking to enhance certification of their palm oil production.

In May 2011, directly prior to the United Nations’ endorsement of the Guiding Principles for the Implementation of the “Protect, Respect and Remedy” Framework on business and human rights (the Guiding Principles), UBS convened a meeting in Thun, Switzerland, with a number of universal banks (subsequently referred to as the Thun Group) to consider the Guiding Principles. In 2012, a discussion document setting out the challenges and best practice examples of operationalizing the Guiding Principles in universal banks was drafted and developed. Work is currently ongoing in order to finalize the document.

External ratings, assurance and awards
Our performance and success in the area of sustainability is reflected in the key external ratings and rankings we have achieved. As one of the top 10 companies worldwide in the 2012 Carbon Disclosure Project, UBS was ranked as excellent in its measures to combat climate change.

We are included in the Carbon Performance Leadership Index, which is produced by the Carbon Disclosure Project and features companies that have distinguished themselves through their efforts to reduce emissions and their strategies for combating climate change. We are also represented in the Carbon Disclosure Leadership Index, putting us among the companies which are setting the standards in reporting on the risks and opportunities arising for businesses in connection with climate change. We are among the few financial sector companies represented in both Carbon Disclosure Project indices.

We have been a member of the FTSE4Good index series since its inception and obtained a top ranking in 2012. We are, however, disappointed that we were removed from the Dow Jones Sustainability Index World (DJSI World). Our overall assessment had risen to 76 points in 2011, a score we maintained throughout 2012, but as the benchmark was raised in 2012, we no longer qualified for inclusion in the index.

We received several honors in the 10th annual Thomson Reuters Extel/UUKSIF Socially Responsible Investing & Sustainability Survey of over 500 investment professionals from 27 countries. We were named the leading brokerage firm for renewable energy research and our head of global sustainability research in the Investment Bank was honored as the leading brokerage individual for thematic research. UBS was ranked second in the leading brokerage firm for thematic research and leading brokerage individual for renewable energy research categories, as well as third in the leading brokerage firm for integrated research on climate change and leading brokerage firm for SRI & sustainability overall categories.

Furthermore, we were ranked third in Lundquist’s CSR Online Awards Switzerland 2012, maintaining our top-three ranking for the fourth consecutive year. These awards consider how well corporate websites are used as a platform for corporate social responsibility communications and stakeholder engagement.

Stakeholder dialogue
We regularly engage with our stakeholders on a wide range of topics, yielding important information on their expectations and concerns. This provides a critical contribution to our understanding and management of issues relevant to our firm. Our relationships with stakeholders are multi-faceted and include major single interactions with large groups (e.g. the 2012 employee survey), regular communications throughout the year with representatives from a particular group (e.g. media), as well as dialogue meetings with single individuals (e.g. client enquiries).

In 2012, we engaged with experts and stakeholders on a range of topics. These included discussions with clients on values-based investing, including those taking place at the 2012 UBS Philanthropy Forum. At the annual UBS Q-Series® conference, global thought leaders were joined by nearly 200 clients and investors. The conference featured 40 speakers from some of the world’s leading academic and business institutions, who identified inflection points – ranging from current environmental, social and governance issues to the impact of changing dynamics – and discussed how these can affect a company’s business objectives and ultimate profitability.

Discussions with employees covered various sustainability topics, including energy. Working together with investors and rating agencies, we considered key environmental, social and governance topics such as climate change, while discussions with non-governmental organizations focused on the subjects of deforestation, mining, controversial weapons, and climate change, particularly in relation to coal. In addition, we sought input from our employees regarding our corporate responsibility strategy and associated activities. An internal, cross-divisional and cross-regional network of experts continues to play a particularly important role, with its members providing critical input on stakeholder expectations and concerns. These contributions are relayed back to the Corporate Responsibility Committee and provide a very
valuable addition to information gathered through other monitoring channels.

We believe it is crucial that we keep our stakeholders informed about our sustainability commitments and activities. To this end, we include sections in our Annual Report 2012 dedicated to “Corporate responsibility” and “Our employees”. The content of these sections, other relevant Annual Report text and data and information on the UBS website are reviewed by Ernst & Young Ltd according to the Global Reporting Initiative’s Sustainability Reporting Guidelines.

➔ Refer to www.ubs.com/gri for more information

Training and awareness-raising

We actively engage in internal and external education and awareness-raising on corporate responsibility topics and issues. Through induction, education and broader awareness-raising activities we ensure that our employees are in no doubt as to the importance of our societal commitments. General information is published on our intranet and on our corporate responsibility website. In 2012, training and awareness-raising activities for employees continued to embrace the Code of Business Conduct and Ethics, notably through induction events for all new employees. Employees were also made aware of the firm’s corporate responsibility strategy and activities through other training and awareness-raising activities. Some 4,514 employees received training on environmental issues, of which, 3,548 received a general education on our environmental policy and programs and 966 participated in specialist training targeted within their area of expertise and influence. Employee speaker sessions, exhibitions and lunchtime training sessions were delivered in all regions alongside specific technical training for the regional environmental teams. Employees are also required to undergo regular refresher training in anti-money laundering-related issues. This includes online training, awareness campaigns and seminars.

➔ Refer to the “Education and talent development” section of this report for more information

Corporate responsibility in banking

We are focused on gaining and retaining the trust of all our stakeholders alongside our goal of generating sustainable earnings and creating long-term shareholder value. We are aligned with the demands of our shareholders, clients, employees and society in general and our banking activities are undertaken in a responsible manner. In addition, we are constantly striving to ensure that our products and services are suited to the needs and requirements of our clients. Through our corporate responsibility efforts we demonstrate that we are not only listening to our stakeholders, but also aiming to be in an industry-leading position and meet their expectations.

Combating financial crime

We continue to further strengthen our efforts to prevent and combat financial crime. Our commitment to assisting in the fight against money laundering, corruption and terrorist financing is illustrated by the way we take responsibility in our own operations for preserving the integrity of the financial system. We employ a rigorous risk-based approach to ensure our policies and procedures are able to detect risks and that relationships which are classified as higher risk are dealt with appropriately. We adhere to strict know-your-client regulations without undermining clients’ legitimate right to privacy. Ongoing due diligence and monitoring, including the use of advanced technology to help identify transaction patterns or unusual dealings, assists in the identification of suspicious activities. If suspicious activities are discovered, they are promptly escalated to management or control functions.

During 2012, Global AML (anti-money laundering) Compliance worked closely with the Environmental and Social Risk group to develop and introduce new and more effective ways to screen potential business partners, vendors and clients with regards to potential issues relating to environmental and social risk.

In 2011, all business divisions were required to perform a legal and compliance risk assessment. This comprehensive process, which included an assessment of corruption, sanction and anti-money laundering risks, is also forward-looking with follow-up actions to highlight the priorities and objectives for each business division. This risk assessment did not identify any significant incidents of non-compliance with our anti-corruption policy and other anti-corruption regulations. Nonetheless, in 2012 an anti-corruption initiative was put in place to strengthen our defenses against corruption.

As part of our extensive and ongoing efforts to prevent money laundering, corruption and terrorist financing, our internal global anti-money laundering policies were reviewed in 2011 and enhancements to address more specific risks in relation to corruption and terrorist financing were implemented globally. We have also reviewed and amended our approach to controversial weapons in order to comply with the Swiss law that came into effect on 1 February 2013. This law implements the Oslo Convention ban on the use, stockpiling, production and transfer of cluster munitions and the ban on the use, stockpiling, production and transfer of anti-personnel mines and on their destruction.

We are a founding member of the Wolfsberg Group, an association of 11 global banks established in 2000 which aims to develop financial services industry standards and related products.

Our environmental policy

Certified environmental management system

Training and communication
Managing environmental and social risks

UBS applies a risk framework to all transactions, products, services and activities in order to identify, assess and manage environmental and social risks. Environmental and social (including human rights) risks are broadly defined as the possibility of UBS suffering reputational or financial harm from transactions, products, services or activities such as lending, capital raising, advisory services or investments that involve a party associated with environmentally or socially sensitive activities. For products, services and activities identified as having significant environmental and social risk potential, procedures and tools for the timely identification, assessment, escalation and monitoring of such risks are applied and integrated into standard risk, compliance and operations processes.

- Client on-boarding or conflict clearance: new corporate clients are assessed for environmental and social risks associated with their business activities.
- Transaction due diligence: before proceeding with a transaction, environmental and social risks are identified and analyzed as part of standard transaction due diligence processes.
- Product development: new financial products and services are reviewed before launch to assess their compatibility and consistency with UBS’s environmental and human rights principles.
- Supply chain management: prior to any new or renewed contract being awarded, standardized checks are completed to assess supplier- and commodity-specific environmental, labor and human rights risks.
- In-house environmental management: our operational activities and employees, or contractors working on UBS premises, are assessed for compliance with relevant environmental regulations.

Business or control functions are responsible for identifying and assessing environmental and social risks as part of the client, supplier or transaction due diligence process. Where these functions determine the existence of potential material risk, they refer the client, supplier or transaction to a specialized environmental and social risk unit for enhanced due diligence. To support the consistent identification and assessment of such risks, we developed internal industry sector guidelines in 2009. These guidelines provide an overview of key environmental and human rights issues that arise in the various life cycles of the sector, and summarize industry standards in dealing with them. The guidelines currently cover six sectors: chemicals; forestry products and biofuels; infrastructure; metals and mining; oil and gas; and utilities. If identified risks are determined to create significant potential reputational risk, they are escalated for approval to senior management, at divisional, regional, or group level, depending on the significance of the risk.

In 2011, we strengthened our environmental and social (including human rights) risks framework by defining controversial activities that we will not engage in, or will only engage in under stringent pre-established guidelines.

➔ Refer to the “UBS position on relationships with clients and suppliers associated with controversial activities” section below for more information

\(^1\) Global Reporting Initiative (see also www.globalreporting.org). FS stands for the Performance Indicators defined in the GRI Financial Services Sector Supplement.  
\(^2\) Transactions and onboarding requests referred to and assessed by environmental and social risk functions.  
\(^3\) Relates to procurement / sourcing of products and services.
Clients, transactions or suppliers potentially in breach of UBS’s position, or otherwise subject to significant environmental and human rights controversies, are identified as part of UBS’s know-your-client compliance processes. This was made possible by integrating advanced data analytics on companies associated with such risks into the web-based compliance tool used by UBS staff before they enter into a client or supplier relationship, or a transaction. The systematic nature of this tool vastly enhances our ability to identify potential reputational risk, and is evidenced by the increasing number of cases referred for assessment to our environmental and social risk units in 2012.

➔ Refer to the “Environmental and social risk assessments” table above for more information

Sustainable products and services
By integrating environmental and social considerations into our advisory, research, investment, finance and ownership processes across all our businesses, we provide financial products and services which help our clients benefit from environmentally and socially related business opportunities.

Investment advisory
UBS offers investment advisory services for wealth management clients helping them to consider the potential social and environmental impacts of their investments as well as the potential financial returns when selecting an investment opportunity. Our philanthropy and sustainable investing teams have continued to develop the holistic service offered within our wealth management business. These teams provide thought leadership, advice, products and solutions to existing and prospective private clients who wish to make investments in accordance with their own personal values. These services also extend to aiding philanthropic or investment decisions intended to effect positive change. For example, UBS Portfolio Screening Services help Wealth Management clients align their portfolios to their sustainability values by assessing client portfolios using specific sustainability criteria. Based on increased interest among our clients, we screened CHF 1.2 billion of client assets in 2012. In 2012, we also developed a prototype UBS Sustainability Health Check which highlights any discrepancies between clients’ sustainability preferences and the actual composition of their portfolio. We plan to develop this advisory service in 2013 with planned roll out to clients in 2014. Also in 2012, the Arbor Group within Wealth Management Americas established a new program by which UBS donates a portion of their standard management fee to the Conservation Agreement Fund for all interested investors. Our services also include

– mission-related investing for donor-advised funds and private foundations
– sustainable portfolio management, such as mandate solutions and separately managed accounts for private clients and institutions with a strong focus on sustainability across all asset classes

UBS position on relationships with clients and suppliers associated with controversial activities

This position stipulates activities that we will not engage in, or will only engage in under stringent pre-established guidelines. We will not knowingly provide financial services to corporate clients, or purchase goods or services from suppliers, where the use of proceeds or primary business activity of the client, supplier or acquisition target involves environmental and social risks, defined as follows:

Extractive industries, heavy infrastructure, forestry and plantations operations that risk severe environmental damage to or through:

– endangered species of wild flora and fauna listed in Appendix 1 of the Convention on International Trade in Endangered Species
– high-conservation-value forests as defined by the six categories of the Forest Stewardship Council
– uncontrolled and/or illegal use of fire for land clearance
– illegal logging, including the purchase of illegally harvested timber (logs or roundwood)
– palm oil production unless a member in good standing of the Roundtable on Sustainable Palm Oil and actively seeking to enhance certification of its production
– wetlands on the Ramsar List of Wetlands of International Importance
– world heritage sites as classified by the United Nations Educational, Scientific and Cultural Organization (UNESCO)

All commercial activities that:

– engage in child labor as defined by the International Labor Organization’s Conventions 138 (minimum age) and 182 (worst forms)
– engage in forced labor as defined by the International Labor Organization’s Convention 29
– threaten indigenous peoples’ rights as defined by the International Finance Corporation’s Performance Standard 7
– engage in diamond mining and trading of rough diamonds unless Kimberley Process-certified
Our UBS Q-series reports focus on thought-provoking discussions on pivotal investment questions, and on making clear investment conclusions, leading to a firm-wide drive for more thoughtful, proprietary and valuable research. Examples of Q-series reports published in 2012 include “Global Pharmaceuticals – Will vaccines transform pharma growth?”, “Global Marine Sector: Is green shipping just a storm in a teacup?” and “What is ‘Integrated Reporting’? – How good disclosure connects to value”.

The Investment Bank’s UBS Q-series ESG Analyzer seeks to answer one of the most frequently asked questions in the field of sustainability, namely which environmental, social and governance issues are material in the context of a typical investment portfolio? The ESG Analyzer identifies top-positioned stocks for sustainability themes and identifies environmental, social and governance issues in more than 30 sectors and across close to 500 stocks. This comprehensive view is made possible by the input of more than 80 UBS sector analysts worldwide.

The Investment Bank hosted the UBS Q-series conference, which this year focused on “Inflection Points Towards Sustainability” and joined global thought leaders with nearly 200 clients and investors. The Investment Bank also hosted the UBS European Conference “Sustainability Track”, which featured sessions on food provision and on corporate governance.

In 2012, one of the flagship publications of UBS Wealth Management, UBS research focus (“Investing in the future with energy”), discussed how sustainable energy sources are increasing in importance and identified the key implications of this trend for private investors. Sustainable investment topics are also covered in the UBS CIO Monthly Letter, which is available in ten languages.

We also offer our bundled expertise for example in summits for family offices and young successors where clients can meet our experts from all businesses across the firm, including research, advisory and investment.

Our outreach and dialogue programs include a partnership with the Smith School of Enterprise and the Environment at the University of Oxford, with which UBS hosts a series of events, open to both UBS clients and employees, and feature thought leaders from around the globe. Sir David King, who was the founding director of the Smith School, is a Senior Scientific Advisor to UBS and, in this capacity, advises UBS's clients on all scientific matters with specific emphasis on climate change and the challenges it poses to sustainable economic growth.

Global Asset Management offers a range of sustainable investment funds that integrate material sustainability factors with a rigorous fundamental investment process. Their focus is on innovative companies, referred to as sustainability champions, which provide solutions to sustainability challenges. Our investment themes include energy savings, environment, social and health care and demographics. Our objective is to identify winning sustainable business models at attractive valuations, providing our investors with strong excess returns. We also manage four Exchange Traded Funds which track MSCI’s Socially Responsible Indices and are listed on the Deutsche Börse (Xetra), SIX Swiss Exchange and the London Stock Exchange.

Global Asset Management launched UBS Clean Energy Infrastructure Switzerland at the end of 2012. This investment solution for institutional investors offers unprecedented access to a diversified portfolio of Swiss infrastructure facilities and companies in the field of renewable energies and energy efficiency. By the first closing date for subscriptions, on 31 December 2012, capital commitments had reached some CHF 250 million from 18 institutional investors.

Furthermore, Global Asset Management’s Global Real Estate business has defined and implemented a Sustainability and Responsible Property Investment strategy for its real estate products and mandates. As a responsible property investor, the financial objectives of clients remain the primary focus, but we also consider long-term social and environmental aspects.

Through our open architecture, we also offer our wealth management clients the opportunity to invest in socially responsible
Corporate and private clients finance and advisory

UBS provides capital raising and strategic advisory services to renewable energy and clean technology companies globally, including those in the solar, wind, energy efficiency, biofuels and renewable chemicals sectors. Our Renewable Energy & Clean Technology team (RE&CT) within the Investment Bank includes senior employees on four continents. In 2012, the team raised approximately USD 5.7 billion from 12 transactions, further establishing RE&CT as one of the leading clean technology practices globally. Transactions we supported included the USD 350 million initial public offering (IPO) of Borregaard SA – the first internationally book-run IPO in the Nordic region since May 2011 – and the USD 220 million convertible bond transaction for GT Solar, which was the largest offering of its kind for a solar company in 2012. We also supported the USD 319 million H share IPO of Huadian Fuxin – the third-largest IPO in Hong Kong in 2012 – and the USD 72 million IPO of Renewable Energy Group, which is the largest independent biodiesel producer in the United States.

In cap and trade emissions markets, such as the EU Emissions Trading Scheme (EU ETS), companies have annual caps on the amount of emissions their facilities are allowed to produce. Companies that are able to reduce their emissions below their cap can sell their unused quota to other entities, thereby creating an emissions market. Through the use of financial instruments, we are able to help our clients manage their exposure to the emissions markets. UBS Exchange Traded Derivatives is an active member of the major emission exchanges in Europe and North America, and offers execution and full service clearing for contracts on EU ETS allowances, UN Certified Emissions Reductions, Regional Greenhouse Gas Initiative allowances, and permits for nitrogen oxide and sulfur dioxide.

In Switzerland, our home market, we reward energy-efficient renovations and support the goals of the Swiss nationwide building efficiency program. Our Swiss private clients benefit from the UBS “eco” Mortgage when building energy-efficient homes and a cash benefit (funded by proceeds from the Swiss CO₂ levy refund) when renovating their homes sustainably.

From 2013 onward, we will incentivize Swiss SMEs to save energy by promoting the Swiss Energy Agency’s SME Model. Clients will profit from the “Energy check-up for SMEs” at reduced costs and, in addition, we will offer a cash premium to clients who commit to an energy reduction plan within this scheme.

Voting rights

We believe that voting rights have economic value and should be treated accordingly. Where Global Asset Management has been given the discretion to vote on behalf of our clients, we will exercise our delegated fiduciary responsibility by voting in the manner we believe will be most favorable to the value of their investments. We are strongly supportive of the Stewardship Code published by the Financial Reporting Council of the United Kingdom in 2010. This aims to enhance engagement between institutional investors and companies. Good corporate governance should, in the long term, lead towards both better corporate performance and improved value for shareholders and other stakeholders. In 2012, we voted on more than 59,000 separate resolutions at 5,945 company meetings. Our approach to corporate governance is an active one and is integral to our investment process. We are an active member of a number of collaborative shareholder bodies.

1 All figures are based on the level of knowledge as of January 2013. 2 FS stands for the performance indicators defined in the Global Reporting Initiative Financial Services Sector Supplement. 3 Includes customized screening services (single or multiple exclusion criteria). 4 Assets subject to restrictions under UBS policy on the prohibition of investments in companies related to antipersonnel mines and cluster munitions. 5 SRI products from third-party providers apply either positive or exclusion criteria or a combination thereof. 6 Invested assets subject to policy-based restrictions in 2011 has been restated. 7 Total SRI / UBS’s invested assets.

**Socially responsible investments (SRI)** are products that consider environmental, social or ethical criteria alongside financial returns. SRI can take various forms, including positive screening, exclusion or engagement.

**Positive criteria** apply to the active selection of companies, focusing on how a company’s strategies, processes and products impact its financial success, the environment and society. This includes best-in-class or thematic investments.

**Exclusion criteria** one or several sectors are excluded based on environmental, social or ethical criteria, for example, companies involved in weapons, tobacco or gambling, or companies with high negative environmental impacts. This also includes faith-based investing consistent with principles and values of a particular religion.
Since 2010, Global Asset Management in Switzerland has offered UBS Voice, a free service enabling holders of Swiss institutional funds to express voting preferences ahead of shareholders’ meetings of major Swiss corporations. This allows additional shareholder input into the voting decisions of the funds’ management company. More than 40% of invested assets for which UBS Voice is offered participate in this service.

Corporate responsibility in operations

Reducing our environmental impact

We have been managing our internal environmental impact for decades. Since the 1970s, we have focused on improving energy efficiency, reducing consumption of paper and other resources, actively managing waste volumes and encouraging our employees to replace air travel with more sustainable options. We manage the UBS Environmental Program through an Environmental Management System in accordance with ISO 14001 and have greenhouse gas emissions data externally verified according to ISO 14064 standards.

Climate change strategy

In 2006, the GEB endorsed a firm-wide CO₂ emission reduction target of 40% below 2004 levels by 2012 which was achieved in the reporting year. Steps taken towards achieving this target included adopting internal efficiency measures, increasing the proportion of renewable energy used and offsetting emissions we cannot avoid, such as business air travel.

We have set a new target as part of our renewed climate change strategy and will aim to reduce our CO₂ emissions by a further 15% by 2016, resulting in an overall reduction of 50% below 2004 levels.

→ Refer to “Our climate change commitment” in this section of the report for more information

Energy consumption and efficiency

Energy consumption has a significant environmental impact and is the biggest contributor to our overall greenhouse gas emissions. Since baseline year 2009, we have reduced our energy consumption by 21%. This reduction comes as the result of, for example, engineering teams ensuring that heating, air-conditioning and lighting controls of buildings we occupy are optimized. In addition, we apply externally verified standards to validate building performance.

Information technology (IT) consumes half of the electricity used by the global business and our IT-driven initiatives contributed significantly to these energy savings. Consolidation and virtualization have reduced average IT server energy consumption by 22% since 2011. The Desktop Transformation Program initiated in 2010 and continued through 2012 is designed to reduce the number of personal computers by 14% whilst ensuring that new computers and monitors are more energy-efficient than the equipment they replace.

Legend: CO₂e = CO₂ equivalents; FTE = full-time employee; GWh = gigawatt hour; kWh = kilowatt hour; km = kilometer; kg = kilogram; m³ = million cubic meter; t = tonne

1 Detailed environmental indicators according to the Global Reporting Initiative are available on the internet at www.ubs.com/environment. 2 Gross GHG emissions include: direct GHG emissions by UBS; indirect GHG emissions associated with the generation of imported/purchased electricity (grid average emission factor), heat or steam and other indirect GHG emissions associated with business travel, paper consumption and waste disposal. 3 GHG footprint equals gross GHG emissions minus GHG reductions from renewable energy and GHG offsets. 4 Baseline year 2009 if not indicated otherwise. 5 Baseline year 2004. 6 Green: target achieved; red: target not achieved.
Renewable energy
We are reducing our use of carbon-intensive energy by including a high proportion of renewable energy. In 2004, we sourced 24% of our energy consumption from renewable energy and district heating, increasing this to 42% by 2012.

Business travel and offsetting CO₂ emissions
We try to minimize our CO₂ emissions and encourage our employees to choose alternatives to air travel such as high-speed rail, recording an 8% reduction in the number of flights taken and a 5.7% increase in global employee rail travel in 2012. Our investments in video conferencing solutions contributed to this reduction and we also recorded a 31% increase in video conference volumes compared with the previous year. The marketing and events team adopted environmental guidelines for client conferences and considered the impact of delegate travel, hotels, venue facilities and catering as part of their logistics and planning.

Over the past six years, we have offset all CO₂ emissions resulting from agency booked business air travel and client events and conferences. We neutralized over 600,000 metric tons of CO₂ emissions and thereby supported renewable energy and other projects reducing CO₂ emissions with an amount of CHF 5.3 million. Projects we selected meet the requirements of the Gold Standard for voluntary emissions reductions while providing positive community benefits. Schemes selected include a wind power project in Turkey and community biofuel projects in China, South Africa and India.

Paper, waste and water targets
To complement our climate change strategy, we are committed to further reducing our environmental footprint and set targets to reduce paper consumption, waste generation and water usage. In 2012, we surpassed all of these targets, except for the one set for waste recycling, as evidenced by the data provided in the table “Environmental targets & performance in our operations”.

- The amount of paper used per employee decreased 6% compared with baseline year 2009. Double-sided printing and copying, now the default setting for printers used by the majority of our employees, combined with an ongoing shift towards the distribution of electronic documents, contributed to our surpassing the target to stabilize paper use. We increased the percentage of office paper from Forest Stewardship Council (FSC) or recycled sources from 34% in 2009 to 56% in 2012, surpassing our 50% target.
- The continued implementation of bin-less offices in many larger locations has reduced the waste per employee by 13% since 2009, surpassing the target to stabilize this at 2009 levels. However, our waste recycling ratio has stabilized at 54%, falling short of our target of 70%. Paradoxically, this is due to our success in reducing annual paper consumption, a significant recyclable waste stream, from 130 kg to 122 kg per full-time employee.

- Our water consumption decreased 23% compared with 2009 levels, exceeding our target of 5%.

- Engaging our employees
By educating, increasing awareness among and offering incentives to employees on environmental matters, we hope to help them behave in a sustainable way both at work and at home. As part of our commitment to reducing CO₂ emissions, we continued to support Earth Hour in March 2012, switching off lights in UBS offices in 58 cities around the world, for one hour. This was also the starting signal for our annual internal and external environmental awareness campaign. The theme in 2012 was ‘Less is more’ and focused on energy efficiency, with activities including environmental fairs, an online environmental quiz and video messages from experts, as well as articles and interviews with senior management posted on our internal and external websites.

Responsible supply chain management
We purchase products and services ranging from office maintenance services across information technology infrastructure to items such as stationery. Responsible supply chain management principles serve to embed our ethics and values with our suppliers, contractors, service partners and project teams. As part of this commitment, we have implemented a framework to identify, assess and monitor supplier practices in the areas of human and labor rights, the environment and corruption. In 2012, we refined our risk rating concept and initiated training with our procurement and sourcing specialists. All our significant active suppliers have been screened for existing environmental and human rights issues. These screenings identified no critical issues according to UBS’s requirements. In addition, over 400 suppliers completed a responsible supply chain questionnaire assessing environmental and social management practices.

Community investment
We continued our well-established tradition of supporting the advancement and empowerment of organizations and individuals within the communities in which we do business. Our initial focus was centered on direct cash donations, but our community investment program now encompasses employee volunteering, matched-giving schemes, in-kind donations, disaster relief efforts and partnerships with community groups, educational institutions and cultural organizations in all of our business regions.

Community Affairs
In 2012, UBS and our affiliated foundations made direct cash donations totaling CHF 27.5 million to carefully selected non-profit partner organizations and charities, compared with CHF 31.1 million in 2011. Additionally, spending on the UBS Anniversary Edu-
cation Initiative amounted to CHF 16.7 million. These donations were primarily aimed at our Community Affairs key themes of education and entrepreneurship. Contributions were also made to other causes, in particular disaster relief, including a commitment of more than USD 1.2 million in total financial contributions to long-term relief and rebuilding efforts in response to the devastation caused by Hurricane Sandy in the United States. These donations, combined with other significant activities, notably the volunteering activities of employees, have continued to provide substantial benefits to projects and people around the world, as demonstrated by the examples provided below.

Across all business regions, our employees continue to play a very active role in our community investment efforts, in particular through their volunteering activities. In 2012, 12,563 employees spent 110,065 hours volunteering, an increase of 8% and 5%, respectively, compared with 2011. We support their commitment by offering up to two working days a year for volunteering efforts, and also match employee donations to selected charities.

In Switzerland, our community investment efforts are also advanced by the UBS Culture Foundation, the UBS Foundation for Social Issues and Education, and the A Helping Hand from UBS.

Our climate change commitment

Climate change is one of the most significant challenges of our time. The world’s key environmental and social challenges, such as population growth, energy security, loss of biodiversity and access to drinking water and food are all closely intertwined with climate change. This makes the transition to a low-carbon economy vital.

We recognize that financial institutions are increasingly expected to play a key role in the transition to a low-carbon economy, and we are determined to support our clients in preparing for success in an increasingly carbon-constrained world. As one of the leading wealth management firms worldwide, and the leading universal bank in Switzerland backed by a top asset management business and a client-centered investment bank, our climate change strategy focuses on the following areas. It is in these areas where we believe we can make the greatest contribution to the transition towards a low-carbon economy:

- **Risk management: seeking to protect our clients’, and our own, assets from climate change risks, within our sphere of influence.** Recognizing that the transition to a low-carbon economy will take time and that fossil fuels will continue to dominate energy production for decades to come, we are determined to understand the risks that our clients’, and our own, assets are exposed to in the context of uncertain policy and technology developments addressing climate change. This includes developing a metrics-based approach to measure our exposure to climate change risks in high-risk sectors such as real estate and energy.

- **Investments: helping to mobilize private and institutional capital towards investments facilitating climate change mitigation and adaptation.** Our clients will continue to look for investment opportunities and some will increasingly focus on investments facilitating climate change mitigation and adaptation.

- **Finance: supporting this transition as corporate advisor, and/or with our lending capacity.** We are helping corporate clients raise capital on domestic/international capital markets in order to meet the high investment levels required for the transition to a low-carbon economy. In Switzerland, we are also supporting private clients in renovating their private homes sustainably and innovative small and medium-sized enterprises (SMEs) in providing solutions for climate change mitigation and adaptation.

- **Research: offering world-class research capacity to our clients on climate change issues.** Building on our renowned expertise, we act as a thought leader and expert advisor to our clients on financial impacts of, and solutions for, climate change.

- **In-house operations: reducing our own greenhouse gas emissions.** We are positioning our in-house operations in support of a low-carbon economy by further investing in
Employees association. In 2012, these organizations made valuable contributions to important social causes, including fostering the humanities and the creative arts, supporting communities in need, and helping disabled and disadvantaged people.

Client foundation
Established in 1999, the UBS Optimus Foundation works to break down the barriers that prevent children from reaching their potential. The Foundation works with carefully selected partners globally on projects which help children in the areas of health, education and protection against violence and sexual abuse. Since its establishment, the Foundation has received more than 18,000 donations totaling over CHF 175 million, enabling it to support 275 projects in 75 countries. Because UBS bears all administrative costs related to the UBS Optimus Foundation, 100% of every donation goes directly towards the projects funded.

In 2012, we published the Optimus Study, the most comprehensive research ever conducted in Switzerland into the extent of sexual assault on children and adolescents. The study’s findings are helping the government and child protection agencies to improve in delivering child protection services for children and in turn, reduce the incidence of child sexual victimization.

sustainable real estate and efficient IT infrastructure and limiting business travel-related CO2 emissions.

- Engagement & disclosure: reporting and communicating transparently about the progress of our strategy. We are engaging with our stakeholders on climate change issues and continue to raise awareness among our employees. In addition, we will continue to disclose progress we make in executing our climate change strategy through established standards, such as the Global Reporting Initiative and the Carbon Disclosure Project.

These efforts build on a history and strong track record of reducing our environmental footprint in a consistent and transparent manner. In the reporting year 2012, we reached our ambitious goal set in 2006 to reduce CO2 emissions by 40% compared with 2004 baseline levels. A target on which we delivered successfully by adopting energy efficiency measures to reduce the energy consumption of the buildings we occupy, and of critical facilities such as the data centers we use, while increasing the proportion of renewable energy used. Emissions that cannot be reduced by other means (e.g. business air travel) are offset. Our achievements have been recognized by external experts, in particular by the most significant climate-change-focused investors’ initiative, the Carbon Disclosure Project, which in 2012 ranked UBS as one of the top 10 companies worldwide for excellence in transparency and achievement in combating climate change.

We will regularly report on the progress we make in executing our new climate change strategy which, in 2013, will focus on the following elements:

- Participating in an industry-wide initiative to develop accounting metrics for CO2 emissions associated with lending and investments;
- Reducing the environmental impact of our Global Real Estate investment portfolios;
- Offering the “Energy check-up for SMEs” to Swiss SMEs in partnership with the Swiss Private Sector Energy Agency and renewing the cash bonus to support private clients in renovating their private homes sustainably;
- Launching UBS Clean Energy Infrastructure Switzerland for institutional clients to invest in renewable energy infrastructure;
- Continuing to support renewable energy and clean technology financing through our Investment Bank;
- Developing the UBS Sustainability Health Check, which will allow Wealth Management clients to identify discrepancies between their sustainability preferences (including climate change) and the composition of their portfolio; and
- Reducing our greenhouse gas footprint by 50% compared with 2004 baseline levels, another 15% below 2012 levels, and reducing our overall energy consumption by 10% compared with 2012 levels by 2016.
Key examples of UBS’s community investment activities across the globe

Switzerland
To mark UBS’s 150th anniversary, UBS Employee Volunteering teamed up with the Swiss Foundation for Landscape Conservation for 10 jubilee projects. More than 330 UBS volunteers worked for more than 3,300 hours across all UBS regions helping to restore the Swiss landscape. One of the projects took place on an alpine pasture in Gantrisch nature reserve where employees helped to preserve the species-rich meadows and alpine pastures as well as other important landscape features. Another of these projects took place in Liddes where UBS employees had the opportunity to work on the historic irrigation canal “Bisse de la Tour”, under expert supervision.

Americas
In 2012, Community Affairs Americas expanded the Elevating Entrepreneurs program and teamed up with lenders in two new locations, Chicago and Los Angeles, to provide USD 15 million in financing solutions for qualified small businesses. Through a variety of student mentoring programs sponsored by UBS, we also contributed 8,148 volunteer hours to supporting children and young adults in developing their career and computer skills and providing them with work experience to help them achieve academic success and economic empowerment.

Additionally, we launched Season of Service, a community impact initiative which resulted in approximately 161 different volunteer activities being undertaken from October to December and 4,473 volunteer hours logged by UBS employees across the Americas region. In response to the devastation caused by Hurricane Sandy in late October, Community Affairs Americas announced that UBS is committing more than USD 1.2 million in total financial contributions to aid in the long-term relief and rebuilding efforts.

Asia Pacific
In March 2011, an earthquake and resulting tsunamis devastated Kamaishi City in the Tohoku region of northeast Japan, causing the deaths of 1,250 residents. In response, UBS initiated the UBS Tohoku Project; a five-year strategy to bring relief to the disaster-struck region. In 2012, UBS and Japanese partner organization RCF Tohoku Earthquake Consulting Team, a reconstruction support organization, implemented the second phase of this strategy to help regenerate and rebuild the local community. Asia Pacific volunteers were first introduced to the work of RCF Tohoku Earthquake Consulting Team and the local rebuilding strategy Create-Play-Learn-Eat, allowing them to learn about the situation in Kamaishi before working on respective proposals for each of the focus areas to support the regeneration and rebuilding efforts.

UBS volunteers also spent a day harvesting rice at the UBS RICE Project paddy field. The UBS RICE Project aims to improve the water quality and biodiversity of Lake Kasumigaura, north of Tokyo, and it is part of a larger program led by UBS’s community partner, Asaza Fund, to provide local children with the opportunity to learn about ecosystems and develop environmental awareness. Through UBS’s investment, the environment around the previously abandoned paddy field has been enriched and continues to thrive.

Europe, Middle East and Africa
UBS was given the 25th Anniversary Lord Mayor of London’s Dragon Award in recognition of the achievements of the firm’s community affairs program in London over the past 25 years.

Some 90 young performers from On-track, UBS’s community partnership with the London Symphony Orchestra, performed at the opening ceremony of the Olympics.

Across the region, rapidly increasing numbers of UBS employees are sharing their business skills through strategic volunteering in their local communities: In Israel 90% of employees are supporting young social entrepreneurs in partnership with Ashoka Ventures, and in Turkey 40% of employees are supporting students in developing their science and math skills.
