Tech developments for a more sustainable world

04 December 2018, 11:22 pm CET, written by UBS Editorial Team

A bionic mushroom that generates electricity is just one of a number of innovations that could help us live more sustainably.

Bionic mushroom generates electricity: US researchers fitted electricity-generating fungi with a network of electrodes and cyanobacteria to produce bio-electricity. The research now aims to develop ways of generating greater currents using this method.

Train that emits water and steam, no carbon: The world's first hydrogen train has been developed, emitting only steam and water, according to Business Today. The pollution-free train runs using hydrogen-powered fuel cells and can reach speeds of 140km per hour. These "Hydrail" trains will join Germany's growing network of zero-emission trains.

CO2 into fuel molecules: Researchers at the US Department of Energy have identified an electrocatalyst that efficiently converts carbon dioxide into the highly energetic carbon monoxide, which can then be converted into usable energy in the form of molecules used to create fuel.

Important information

As a firm providing wealth management services to clients, UBS Financial Services, Inc is registered with the U.S. Securities and Exchange Commission (SEC) as an investment adviser and a broker-dealer, offering both investment advisory and brokerage services. Advisory services and brokerage services are separate and distinct, differ in material ways and are governed by different laws and separate contracts. It is important that you carefully read the agreements and disclosures UBS provides to you about the products or services offered. For more information, please visit our website at www.ubs.com/workingwithus. ©UBS 2018. All rights reserved. UBS Financial Services Inc. is a subsidiary of UBS AG. Member FINRA/SIPC.

There are two sources of UBS research. Reports from the first source, UBS CIO Wealth Management Research, are designed for individual investors and are produced by UBS Wealth Management Americas (which includes UBS Financial Services Inc. and UBS International Inc.) and UBS Wealth Management. The second research source is UBS Investment Research, and its reports are produced by UBS Investment Bank, whose primary business focus is institutional investors. The two sources operate independently and may therefore have different recommendations. The various research content provided does not take into account the unique investment objectives, financial situation or particular needs of any specific individual investor. If you have any questions, please consult your Financial Advisor. UBS Financial Services Inc. is a subsidiary of UBS AG and an affiliate of UBS International Inc.

ESG/Sustainable Investing Considerations: Sustainable investing strategies aim to consider and in some instances integrate the analysis of environmental, social and governance (ESG) factors into the investment process and portfolio. Strategies across geographies and styles approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit the portfolio manager's ability to participate in certain investment opportunities that otherwise would be consistent with its investment objective and other principal investment strategies. The returns on a portfolio consisting primarily of ESG or sustainable investments may be lower or higher than a portfolio where such factors are not considered by the portfolio manager. Because sustainability criteria can exclude some investments, investors may not be able to take advantage of the same opportunities or market trends as investors that do not use such criteria. Companies may not necessarily meet high performance standards on all aspects of ESG or sustainable investing issues; there is also no guarantee that any company will meet expectations in connection with corporate responsibility, sustainability, and/or impact performance.
