Markets caught between military and central banks

Investment strategy insights

Author: Matteo Ramenghi, Chief Investment Officer, UBS WM Italy, UBS Europe SE, Succursale Italia

- **Hormuz and central banks, the game changers:** As geopolitical tensions and energy price spikes dominate headlines, energy supplies and central banks steer market direction. Bond yields are surging and stocks are wobbling, yet volatility remains surprisingly contained. Investors are closely watching every move from the ECB and BoE. With policymakers signaling a hawkish stance but keeping rates steady for now, the next chapter for markets will depend on their response to inflation and growth risks.
- **Staying Invested Typically Pays Off:** In times of uncertainty, exiting the market can mean missing out on rebounds. Our strategy is to stay invested, while pivoting toward defensive sectors and high-quality bonds to weather volatility and seize opportunities. We focus on resilient areas—Switzerland, European health care, and companies benefiting from structural trends such as AI, longevity, and the energy transition.

Financial markets often observe wars with a degree of detachment, “looking through” the headlines and limiting portfolio damage. So far, equity markets have declined—mirroring the increases in energy prices—but, overall, volatility has remained in check.

In contrast, the bond market has felt the strain, with yields moving sharply higher. The German two-year Bund has risen from 2.0% to nearly 2.7%, the 10-year from 2.1% to over 3.0%, and spreads on Italian and other bonds have widened. Gold has also experienced a significant double-digit correction.

These moves reflect concerns about a potential shift in monetary policy, with falling rates having been a key market support in recent years. Any central bank pivot now hinges on a difficult-to-forecast variable: the duration of the Iran conflict, structural damage to critical infrastructure, and the reopening of the Strait of Hormuz.

Sharp spikes in oil and gas prices, if short-lived, tend to have manageable economic effects, especially as reserves help cushion the impact in the near term. But if supply disruptions and elevated energy costs persist, the effects on the economy and inflation become more pronounced, raising the specter of stagflation—stagnant growth coupled with high inflation.

To gauge the impact on inflation and growth, the duration of the conflict and the persistence of high energy prices are key. Our base case assumes energy flows will be restored without meaningful or lasting economic damage, and oil and gas prices will settle at lower levels than today (we forecast Brent crude at USD 90/bbl at the end of June, falling to USD 85/bbl in 12 months). Although gas prices have also risen since the outbreak of the conflict, they remain far

below their 2022 peaks.

Higher prices are already feeding into the economy. Inflation in the coming months is likely to rise, with headline rates exceeding 3% year on year, possibly reaching 4% if supply disruptions persist, in both the Eurozone and the UK. Higher inflation and rising bond yields—which make borrowing more expensive across the economy—are likely to reduce growth by 20-30 basis points this year.

Before the conflict, we expected GDP to grow a little above 1% in the Eurozone and the UK this year; we still expect positive growth, but weaker than before the conflict.

The Eurozone is particularly vulnerable: It uses less energy per unit of output than other regions, thanks to greater efficiency, but remains a net importer (about 70% of energy is imported) and relies on Middle Eastern supply routes. The energy mix is dominated by oil and gas (about 58% of final consumption), while France is in a better position owing to its reliance on nuclear power.

As in 2022, after the gas spike following Russia's invasion of Ukraine, support packages for households and businesses are expected. These measures can soften the economic blow but come at a cost—higher deficits and debt, leading to rising financing costs. It's likely that any support will be measured and temporary.

Stagflation is the toughest scenario for central banks, presenting a real dilemma: Raise rates to curb inflation and risk triggering a recession, or let inflation run and risk entering a self-reinforcing inflationary spiral that is hard to break. Before the war, markets expected two rate cuts in the US and relative stability in Europe. Now, expectations have shifted to more than two hikes in the Eurozone and steady rates across the Atlantic.

Following the round of central bank meetings at the end of March, the message is clear: Inflation is heading up and policymakers are sending hawkish messages, with their focus on the second-round effects of inflation (inflation expectations) rather than the initial shock. Therefore, we expect the European Central Bank (ECB) and Bank of England (BoE) to keep rates on hold with hawkish guidance until the energy shock has passed.

What does all this mean for portfolios? The Middle East conflict highlights the Achilles' heel of a balanced portfolio: In a stagflation scenario, where inflation is high but growth is weak, both stocks and bonds lose value. Stocks drop as higher rates weigh on valuations and growth, while bonds fall as yields rise. The inflation crisis of the 1970s and the global shock of 2022 are clear examples.

Based on current information, if the conflict doesn't drag on, central banks may wait a few more months before hiking rates. If that's the case, the bond market may have overreacted, and high-quality government bonds and short-term investment-grade corporate bonds (around two years) could now offer attractive entry points, with yields likely to decline in the coming months.

On the equity side, our approach is to stay invested to avoid missing potential rebounds. We continue to hold an Attractive view on equities overall; however, to better manage risk, sector rotation makes sense: Since the start of the year, we've moved to a Neutral stance on US tech, Europe (especially banks), and India owing to their sensitivity to high energy prices and geopolitical uncertainty, favoring defensive areas like Switzerland and European health care.

We also continue to see compelling investment opportunities in European companies positioned to benefit from global trends—such as *Artificial intelligence*, *Power and resources*, and *Longevity*—as well as the region's ambitious structural reforms.

Global asset class preferences definitions
The asset class preferences provide high-level guidance to make investment decisions. The preferences reflect the collective judgement of the members of the House View meeting, primarily based on assessments of expected total returns on liquid and commonly known indices, House View scenarios, and analyst convictions over the next 12 months. Note that the tactical asset allocation (TAA) positioning of our different investment strategies may differ from these views due to factors including portfolio construction, concentration, and borrowing constraints.
Attractive: We consider this asset class to be attractive. Consider opportunities in this asset class.
Neutral: We do not expect outsized returns or losses. Hold longer-term exposure.
Unattractive: We consider this asset class to be unattractive. Consider alternative opportunities
Note: For equities, we have a five-tier rating system with two additional preferences
Most Attractive: We consider this asset class to be among the most attractive. Investors should seek opportunities to add exposure.
Least Attractive: We consider this asset class to be among the least attractive. Seek more favorable alternatives opportunities.
When equities are included with the other asset classes in the three-tier rating system, we collapse "Most Attractive" with "Attractive" and "Least Attractive" with "Unattractive."

Risk Information
UBS Chief Investment Office's ("CIO") investment views are prepared and published by the Global Wealth Management business of UBS Switzerland AG (regulated by FINMA in Switzerland) or its affiliates ("UBS"), part of UBS Group AG ("UBS Group"). UBS Group includes former Credit Suisse AG, its subsidiaries, branches and affiliates. Additional disclaimer relevant to Credit Suisse Wealth Management follows at the end of this section.
The investment views have been prepared in accordance with legal requirements designed to promote the **independence of investment research**.
Generic investment research – Risk information:
This publication is **for your information only** and is not intended as an offer, or a solicitation of an offer, to buy or sell any investment or other specific product. The analysis contained herein does not constitute a personal recommendation or take into account the particular investment objectives, investment strategies, financial situation and needs of any specific recipient. It is based on numerous assumptions. Different assumptions could result in materially different results. Certain services and products are subject to legal restrictions and cannot be offered worldwide on an unrestricted basis and/or may not be eligible for sale to all investors. All information and opinions expressed in this document were obtained from sources believed to be reliable and in good faith, but no representation or warranty, express or implied, is made as to its accuracy or completeness (other than disclosures relating to UBS). All information and opinions as well as any forecasts, estimates and market prices indicated are current as of the date of this report, and are subject to change without notice. Opinions expressed herein may differ or be contrary to those expressed by other business areas or divisions of UBS as a result of using different assumptions and/or criteria. UBS may utilise artificial intelligence tools ("AI Tools") in the preparation of this document. Notwithstanding any such use of AI Tools, this document has undergone human review.
In no circumstances may this document or any of the information (including any forecast, value, index or other calculated amount ("Values")) be used for any of the following purposes (i) valuation or accounting purposes; (ii) to determine the amounts due or payable, the price or the value of any financial instrument or financial contract; or (iii) to measure the performance of any financial instrument including, without limitation, for the purpose of tracking the return or performance of any Value or of defining the asset allocation of portfolio or of computing performance fees. By receiving this document and the information you will be deemed to represent and warrant to UBS that you will not use this document or otherwise rely on any of the information for any of the above purposes. UBS and any of its directors or employees may be entitled at any time to hold long or short positions in investment instruments referred to herein, carry out transactions involving relevant investment instruments in the capacity of principal or agent, or provide any other services or have officers, who serve as directors, either to/for the issuer, the investment instrument itself or to/for any company commercially or financially affiliated to such issuers. At any time, investment decisions (including whether to buy, sell or hold securities) made by UBS and its employees may differ from or be contrary to the opinions expressed in UBS research publications. Some investments may not be readily realizable since the market in the securities is illiquid and therefore valuing the investment and identifying the risk to which you are exposed may be difficult to quantify. UBS relies on information barriers to control the flow of information contained in one or more areas within UBS, into other areas, units, divisions or affiliates of UBS. Futures and options trading is not suitable for every investor as there is a substantial risk of loss, and losses in excess of an initial investment may occur. Past performance of an investment is no guarantee for its future performance. Additional information will be made available upon request. Some investments may be subject to sudden and large falls in value and on realization you may receive back less than you invested or may be required to pay more. Changes in foreign exchange rates may have an adverse effect on

the price, value or income of an investment. The analyst(s) responsible for the preparation of this report may interact with trading desk personnel, sales personnel and other constituencies for the purpose of gathering, synthesizing and interpreting market information.

Different areas, groups, and personnel within UBS Group may produce and distribute separate research products **independently of each other**. For example, research publications from **CIO** are produced by UBS Global Wealth Management. **UBS Global Research** is produced by UBS Investment Bank. **Research methodologies and rating systems of each separate research organization may differ**, for example, in terms of investment recommendations, investment horizon, model assumptions, and valuation methods. As a consequence, except for certain economic forecasts (for which UBS CIO and UBS Global Research may collaborate), investment recommendations, ratings, price targets, and valuations provided by each of the separate research organizations may be different, or inconsistent. You should refer to each relevant research product for the details as to their methodologies and rating system. Not all clients may have access to all products from every organization. Each research product is subject to the policies and procedures of the organization that produces it.

The compensation of the analyst(s) who prepared this report is determined exclusively by research management and senior management (not including investment banking). Analyst compensation is not based on investment banking, sales and trading or principal trading revenues, however, compensation may relate to the revenues of UBS Group as a whole, of which investment banking, sales and trading and principal trading are a part.

Important Information About Sustainable Investing Strategies: Sustainable investing strategies aim to consider and incorporate environmental, social and governance (ESG) factors into investment process and portfolio construction. Strategies across geographies approach ESG analysis and incorporate the findings in a variety of ways. Incorporating ESG factors or Sustainable Investing considerations may inhibit UBS’s ability to participate in or to advise on certain investment opportunities that otherwise would be consistent with the Client’s investment objectives. The returns on a portfolio incorporating ESG factors or Sustainable Investing considerations may be lower or higher than portfolios where ESG factors, exclusions, or other sustainability issues are not considered by UBS, and the investment opportunities available to such portfolios may differ.

External Asset Managers / External Financial Consultants: In case this research or publication is provided to an External Asset Manager or an External Financial Consultant, UBS expressly prohibits that it is redistributed by the External Asset Manager or the External Financial Consultant and is made available to their clients and/or third parties.

USA: This document is not intended for distribution into the US and / or to US persons.
