

Cyclical & Defensive Sectors with UBS ETFs

UBS Global Asset Management offers Exchange Traded Funds on the MSCI EMU equity sectors, enabling investors a tactical rotation between cyclicals and non-cyclicals. The following MSCI indices are covered:

MSCI EMU Cyclical Sectors	MSCI EMU Defensive Sectors
---------------------------	----------------------------

Key features of *Cyclical & Defensive Sectors* UBS ETFs at a glance:

- Investors are provided with exposure to cyclical and defensive EMU equity sectors indices, comprised of large as well as mid-cap stocks across the 10 developed countries in the EMU market*.
- Exposure to sectors which perform differently over different parts of the business cycle (see Exhibit: "Performance over the last 15 years").
- The weights of the five sectors in the capped indexes are each fixed at 20% of the index, ensuring equal representation of each sector and their equal risk contributions.

Cyclical & Defensive Sectors – MSCI indexes construction and features:

MSCI EMU Cyclical Sectors and MSCI EMU Defensive Sectors indices are constructed from the underlying MSCI EMU index (parent index). MSCI Cyclical Sectors Indexes and MSCI Defensive Sectors Indexes aim to group sectors based on their historical sensitivity to the business cycle. The historical correlation of the ten GICS sectors against the OECD Composite Leading Indicator (CLI) is used for sector classification. The OECD CLI is designed to provide early signals of turning points in business cycles, and its positive correlation with a sector indicates its cyclical behavior; negative correlation indicates defensive nature. The following characteristics differentiate between cyclical and defensive sectors:

- **Cyclical sectors:**
 - high beta and high economic cycle sensitivity
 - cyclicity in dividends and earnings
- **Defensive sectors:**
 - low beta and low economic cycle sensitivity
 - stable dividends and earnings regardless of economy

MSCI Capped Indices maintenance

Within the sector, the eligible constituents are weighted based on their free float market capitalization, while the sectors comprising the index are equally weighted each at 20%. The indices are rebalanced on the last business day of February, May, September and November (quarterly rebalancing). Both indices follow the event maintenance of the MSCI EMU (parent) index, i.e. changes in the parent index are reflected simultaneously in the Cyclical and Defensive Capped indices. The sector classification is static and based on the long-run correlation measures against OECD Composite Leading Indicator.

Equal representation of sectors in capped indexes

Risk disclaimer

This UBS Exchange Traded Fund invests in equities and may therefore be subject to high fluctuations in value. For this reason, an investment horizon of at least five years and corresponding risk tolerance and capacity are required. All investments are subject to market fluctuations. Every fund has specific risks, which can significantly increase under unusual market conditions. As a result, the net asset value of the funds' assets is directly dependent on the performance of the underlying index. Losses that could be avoided via active management will not be offset.
