Why women should take control of their wealth to achieve financial well-being

Women in Switzerland are expected to live longer\* than men...

... and they acknowledge long-term finances as highly important.

However, many women opt out of long-term financial decisions...

... while remaining highly involved in short-term finances.

Main reasons for deferring participation in long-term finances

\* World Health Organization: World Health Statistics 2018

## However, the benefits of shared financial decisions are numerous

---

88%

feel **more confident** about their financial future when they are part of long-term financial decisions

91%

believe they will make **fewer financial mistakes** if they are equally involved in decisions

## Many women face surprises when marriages end....

---

91%

were confronted with **financial surprises** upon their divorce or the death of their spouse

70%

wish they had been **more involved** in long-term financial decisions

62%

encourage other women to take an **active role** in their finances

## ...and wish they had been more involved in financial decisions.

---

## What women recommend to other women

---

59%

suggest taking steps to **educate yourself** about finances

55%

insist on **full transparency** on all accounts

54%

urge women to **talk more about finances** with their spouse

---

Are you **engaged** in financial decisions that affect your life? Talk to your UBS Client Advisor.

We conducted extensive research to study how women around the world engage with their finances. We surveyed nearly 3,700 married women, widows and divorcees in Brazil, Germany, Hong Kong, Italy, Mexico, Singapore, Switzerland, the UK and the US.
